BREECH LOADING GUNS
A SPECIALTY.

We would call the attention of the public to our large assortment of

Breech-Loading Shot Guns,
Manufactured by the following celebrated makers:
Messrs. W. & C. SCOTT & SONS (winners at the International Gun Trial of 1879); W. WEBLEY & SON,
W. W. GREENE, WESTLEY RICHARDS, J. HOLLIS & SONS, and others.

A full line of fine
PISTOLS AND RIFLES CONSTANTLY ON HAND.
DIXONS & HAWKLEY'S SHOOTING TACKLE.
To insure good shooting from breech-loading guns, we would recommend the use of the

STURTEVANT BRASS SHOT SHELLS,
manufactured by the Union Metallic Cartridge Co.,
Bridgport, Conn. These shells are the cheapest and
best in the market, can be easily re-capped with ordi-
nary caps, without the use of the implements neces-
sary in priming all other kinds of shells.
BUSSEY'S PATENT GYRO PIGEON AND TRAP,
WITH CASE, AND 100 BIRDS.

Black's Patent Cartridge Vest.
This Vest affords
the best afford-
ing protection yet in-
vented for carry-
ing cartridges. So
evenly distributed
scarcely felt. The
weight is reduced
by carrying them
in this vest, which
injury when wear-
ing them with the
heads down in the
pockets, and the
weight of the shot
orifices are forward,
which gives the
best result.

In ordering send measurement around the chest.
Price \$7.50.

PODGER'S DAM.

For Forest and Stream.

W H O yer callin' 'ot hunter, say?
Any fell'er that roosts round this way?
'Kase there's a chum of mine a piece up the road,
Showed me one of yer damped papers, and allows its me
That anser on a big part 'er the load
You put on them city chaps. Now see,
I jest want to belet alone, d'ye hear?

Mind how you steer,
Or you won't sell no papers to my friends,
They stands with me—all on 'em, sends
Warnin' to every one of you fancy pole men.
Not to come up in our parts agin,
Or I'm dashed

If you don't get your slimy fins smashed.

I'm free, I am,
An' I've lived class by thes der dam
Nigh on to forty year.

An' its thunderin' queer,
If a paper man, or any cranky cuss,
Comes where he don't belong, to raise a muss,
And try to make me walk a rule;

It's blamed cool.
Pop'lar, or not—agin' the law, or no,
I'm on this thing, and bound to stay; (jes so).

"The public's all agin' me." Let 'em be,
I'll ketch my trout the way et pleases me;
Little and big, you bet it's few I lose,
A hookin', nettin', snarin' when I choose,
I ain't seen no law agin' it yet,
For all ther brag to sue and make me sweat.
I'd jest like ont to see 'em try it on,
I'd fix the flint of every mother's son.

How's that!
Me fined a hundred dollars? sho!
Good joke, though,
Squire, I owe yer one,

I swan!
What! "taint no joke"—plank down or bounce, ye say?
Gosh! who'd a thought the law'd a found its way
To Podger's Dam?
Well, I'm beat, I am.

T. W. A.

Across Newfoundland.

INTERIOR EXPLORATIONS—FLORA, FAUNA, AND GEOLOGICAL FORMATION.

CHAPTER I.

THE recent travels of our valued correspondent, Mr. Murray, in Newfoundland, recalls its previous exploration. In the year 1822 Mr. W. E. McCormack, being then in that country, determined to explore the interior; and in order to do it successfully he commenced trading with some Indians in order to learn all that they could teach him in woodcraft and other accomplishments peculiar to the "Children of the Forest." Equipping two Indians with everything necessary for a campaign of three months, he took passage from St. Johns to Trinity Bay, and noted the topography and geological formation of the coast region. Of a prominent landmark, he says:—

"The Point of Grates is the part of North America first discovered by Europeans. Sebastian Cabot landed here in 1496, and took possession of The Newfoundland, which he discovered in the name of his employer, Henry VII. of England. He recorded the event by cutting an inscription, still perfectly legible, on a large block of rock that stands on the shore.

"Baccola Island, formed of a horizontally stratified rock, apparently gritty slate, is famous for the numbers of sea fowl that frequent it in the breeding season, principally the puffin, called on this coast the Baccola birds. The island has one landing place only, on its east side, and no resident inhabitants; but is visited by men in boats and small schooners called Eggers, who carry off cargoes of new laid eggs. The end of the profession of these men will be the extermination of the sea fowl of these parts for the sake of a cruelly begotten temporary subsistence. The destruction by mechanical force of tens of thousands of eggs, after the commencement of incubation, precedes

the gathering of a small cargo of fresh laid eggs. Penguins, once numerous on this coast, may be considered as now extirpated, for none have been seen for many years past."

Speaking of the scenery near Trinity Bay, he says:—"From the summits of the hills immediately around the harbor there is a view of the country in all directions inland for twenty to thirty miles, encompassing part of Random Island in the southwest. The whole is a continued succession of groups of rugged hills (mountains, except in height), all apparently of a similar description to those on which we stood, with some small patches of fir woods, and a few lakes interspersed. It presented a prospect of at least a week's hard labor overland, before we could reach what we could only hope might be the verge of the interior. This suggested to me the plan of going nearer to the centre of the island by water, in order to save all our strength and resources for the main object of the undertaking, as it was impossible to know what difficulties and necessities we might have to contend with. This was to be effected by taking a boat from hence to the west part of Random Sound, which lay to the west-southwestward. The country we now saw was within the reach of any one to explore at any short interval of time, and was therefore of secondary interest to me.

"The west side of Trinity Bay is composed of rocks of the transition clay slate formation, similar to those on the east. The hills, frequently of 400 to 600 feet in height, are chiefly of greenstone and hornblend slate; the out-goings of the nearly vertical strata and dykes of which sometimes present a perfectly mural front to the sea; blue clay slate alternates, and has cubical iron pyrites often imbedded, some of which are several inches in diameter. In the valleys are beds of horizontally stratified gritty slate of the tabular structure, similar to that noticed at other parts of the east coast. The tables or flags are often several yards in length, formed under a double oblique intersecting cleavage, and admirably adapted for many purposes of building. The beds are traversed in all directions by dykes several feet in thickness, of a dark colored green stone; also of the seamed structure, the plinters of which are translucent at the edges.

"The plants met with at this part of the northeast coast of America, although only 48° 20' N. lat., or nearly in the parallel of Brest, and the highest hills not exceeding 600 feet, seem to be similar to those of Norway and Lapland in the northwest of Europe, under the Arctic Circle.

"Having engaged a boat to carry us to the most inland part of Random Sound, we left Bonaventure on the passage to the northeast entrance. About six miles southwest of Bonaventure we witnessed the phenomenon of the very great transparency of the sea, which it assumes here during the time of change of wind from West to East. The fishes and their haunts amongst the rocks and luxuriant weeds at the bottom were seen to a fearful depth. Every turn of the sound presents a different aspect of rugged, and in some parts grand scenery. Both sides are formed of steep and perpendicular hills of greenstone, and of rocks of the transition clay slate formation, of 500 to 600 feet in height, the nakedness of which displays, as at the outer parts of Trinity Bay, the skeleton of the earth. The strata are of various thickness, and lie in different directions. Patches of fir trees—*Pinus balsamea*—principally grow where the steepness does not prevent debris from lodging. The appearance of both sides of the sound or rut correspond so remarkably that it might be inferred Random Island is a break off from the main island. The North Arm of the sound, that which we came through, is about thirty miles in length, and varies from one eighth to one third of a mile in width. Within two or three miles of its west extremity it expands and becomes shallow, and here the scene of gloom and barrenness is suddenly contrasted with a pretty small sheet of water, surrounded by a flat, thickly wooded country, as inviting as the past was forbidding.

"Random Bar, at the west extremity of the sound, caused by the meeting of the tide here, in the form of two con-

siderable bores from the north and south arms, is dry except for an hour or two before and after high water, and there is then about two feet only of water upon it. It is in 48° 13' north latitude, and 53° 40' west longitude, (by Steel's chart, published in 1817.)

"The land adjacent to the bar is low, and the soil is good. Westward towards the interior it rises from the water's edge very gradually, and is entirely covered with wood.

"Our boat having lain dry on the bar nearly all night, we slept in her in preference to encamping in the woods. Wild geese and other birds were dying to and fro over us during the whole time, most industriously and fearlessly in search of food. This is a favorite resort of ducks, herons, and other aquatic fowls.

"My traveling equipments being landed, the boat with the party which brought my Indian had left us on her return to Bonaventure.

"It would have been impossible, with the object I had in view, to reach this spot by land from St. John's, as the coast we passed is without roads or paths of any kind, and an entire assemblage of rocky mountains, forests, and lakes, intersected by deep bays.

"Being now removed with my Indian from all human communication and interference, we put our knapsacks and equipments in order and left this inland part of the sea shore in a north direction, without regard to any track, through marshes and woods (towards some rising land, in order to obtain a view of the country. The centre of the island bore nearly west from us.

"My dress chiefly consisted of a grey moleskin shooting jacket, small clothes of worsted cord, three entire inside woolen body dresses (no linen or cotton whatever), worsted stockings and socks, Canadian long moccasins boots. The Indian wore leggings or gaiters made of swanskin blanketing, together with moccasins instead of boots. I was armed with a double barrelled fowling piece and a brace of bayoneted pistols, two pounds and a half of gunpowder, and ten pounds of bullet and shot. The Indian had a single barrelled fowling piece and a pistol, and the like quantity of powder and shot. Our stock consisted of a hatchet, two small tin kettles for cooking; about twenty pounds of biscuit, eight pounds of pork, some portable soup, tea and sugar, pepper, salt, etc.; a blanket each, and one for the camp roof, a telescope, a pocket compass each. I took a small fishing rod and tackle, and various minor articles for our casual necessities and for mineralogical and other purposes of observation and notes. On another journey of the kind I should very little vary this equipment.

"After several hours of hard labor, owing chiefly to the great weight of our knapsacks, we made only about two miles progress. From the tops of the highest trees the country in all directions westward for at least twenty miles appeared to be covered with one dense unbroken pine forest, with here and there a bold granitic pap projecting above the dark green surface. We had expected to see some open country nearer.

"At sunset we halted, and bivouacked beneath the forest. As the weather was fine, and no prospect of rain, our camp consisted merely of a fire and a bundle of spruce boughs to lie on. My Indian, Joseph Sylvester by name, at midnight rolled himself up in his blanket, and evidently slept perfectly at home.

"September 6th.—No clear ground appearing in our course, we struck directly westward through the forest. Wind-fallen trees, underwood, and brooks lay in our way, which, together with the suffocating heat in the woods, and mosquitoes, hindered us from advancing more than five miles to-day, in a W.N.W. direction.

"September 7th, 8th, 9th were occupied in traveling westward through the forest, at the rate of seven or eight miles a day.

"In our progress we ascended several of the insulated paps to view the country; stunted firs and a thick rug of moss crept almost to their summits. The prospect of the ocean of indulating forest around—of the high land of

sport. This fish is remarkable from the fact that it contains so much blood. It will bleed more and longer than any other fish known of the size. Anglers that have them can never throw them into the boat. The amount of blood under foot becomes intolerable. They swarm the lake in countless millions, but are all gone in the Winter. Some years ago Oliver Gibbs, Jr., expressed to me the opinion that these fish migrated to the ocean. Since that time I have observed them as closely as possible, and have now also come to the conclusion that they are an anadromous fish. They certainly disappear the first of September and return again in May and the first of June, this being their spawning season. The young remain the second season, when they are of sufficient age to make the long journey with the old fish.

Now, if it be a fact that this fish is anadromous in its habits, it is certainly a very interesting fact. If it be true that they actually make the journey of nearly two thousand miles to and from the ocean, it would appear conclusively that shad and salmon would do the same, so that if the salmon were introduced into the tributaries of the Upper Mississippi we might reasonably expect them to retain their anadromous habits and become plenty in these streams. The same can be said of the shad. This fish, I have no doubt, will become numerous in these waters within a very few years. Meantime, more ought to be introduced.

The lake of Lake Umbagog contains nearly thirty species. Some of these are rare, and little is known, I believe, of their natural history. Of such more anon.

Lake City, Dec., 1894.

TURTLE HUNTING.

THERE are three kinds of turtle which I have hunted, and these are the hard shelled, the soft shelled, and the snapping turtle. The former is much the more common, and the latter the rarest. The hard shelled is about a transverse diameter and a half long, and nearly three-quarters of the same in vertical diameter from the highest point of the upper shell, said diameter passing through the middle of the longitudinal and transverse diameters. The upper shell is very convex longitudinally, and even more so transversely. The head is small, shaped like a snake's, and the neck not very long. The claws are slightly curved and not so strong or sharp as those of either of the other varieties. The upper shell is dark brown, with some dull yellowish broken lines, both longitudinal and transverse. The top of the head is dark brown, and the sides of the head being lined longitudinally with greenish, yellow, and curved stripes. The under parts of jaws and throat are greenish yellow, and the belly is yellow. It lies in the mud during the cold Winter weather, and in the warm days of March comes out to sun itself on the logs of the creeks and bayous. Soon after when the weather gets warmer, it is to be found floating on or near the surface of the water, usually near the edges of the growth of the plants which fringe the shore, and often it lies among the plants, its body concealed by the lily leaves, and its small greenish head so harmonizing in color with the leaves and in shape with the buds, or as yet unfolded leaves, that a person may easily pass many of them without recognizing one. In May the female turtle goes ashore (sometimes for several hundred yards) and digs a hole in the earth, in which to lay her eggs, which number from one hundred to double that number. Having deposited them, she covers them with the loose earth previously removed, and returns to the water, leaving the eggs to the care of the sun and soil. A good sized turtle of this kind weighs about thirty pounds. The soft shelled or leather-backed turtle receives these names from its upper shell being about as soft and flexible around its edges as a piece of hemlock sole leather. It is about a transverse diameter and a half long, and its greatest vertical diameter intersecting the others is about one-third as great. Its neck is large, long, flexible, and ends in a head of about its own diameter, which head terminates in a pointed snout, something like a pig's; its claws are very strong, sharp, and much curved; its back is dark brown, with a marked olive green hue, and is rather lighter at the edges; its belly is yellow, and the sides of its head are marked like its back, but is lighter, fading out and becoming mottled (on the sides) with reddish brown and orange, which blending with white on the throat, give it a very dirty look; its long and extremely mobile neck and powerful jaws, and great courage combined, render it more dangerous to handle than the timid and less voracious hard shelled, or the vicious but comparatively short-necked and clumsy snapping turtle. The soft shelled turtle is seldom found on or near the water among or near lilies, particularly where there is brush in the water; its head and neck are easily mistaken for a piece of a dead and water logged branch; it is quicker and shyer than either the hard shelled or snapping turtle. A forty pound turtle of this kind is large, but I am credibly informed of one which weighed sixty pounds. The snapping turtle is perhaps the ugliest of the three, the shelled, and is much broader and not quite so deep in proportion to its length; its upper shell is nearer gray or brown and colors, as it is dry or wet; the claws are very strong, sharp, much curved, and like those of the soft shelled turtle, terminate in very long, large, strong flippers; its neck looks rougher and more dirty than that of the soft shelled turtle, nor has it any of the brighter coloring sometimes seen there. The snapping turtle likes to live in the swamp, but is sometimes found on logs among lilies, or in the shallow water near the shores of creeks and lakes. Turtles of either of these species (if properly cooked) make soup as good as that from green turtle, but the southern people prefer the soft shelled, and esteem the snapping turtle rather more than the hard shelled. Turtle's eggs are also better eating than those of domestic fowl.

To hunt the turtle, one may use an ensy, paddling canoe, or boat; the Delaware River shooting skiff being considered the best; it should be about thirteen feet long, and if clinker built, the outer edges of the boards should be bevelled, to prevent the lapping of the water in the sharp angles (as even that slight noise is enough to startle a turtle, and when startled he goes off like a flash). It used to canoeing, by all means take a light canoe, suitable for two people, and what they need to carry, namely, two paddles, one pole, twelve to fifteen feet long, with a hook of best steel, three-sixteenths of an inch in diameter, and a shank of six inches at one end of the pole, round bend, sharp point two inches from shank, and one inch and a half from bottom of bend. This pole should be marked at every six inches, so that one can tell instantly which

way the point of the hook is turned when it is out of sight. Add to this a rifle, and a pistol of large bore, and you have your equipment for turtle shooting. Your boat, paddles, clothes and hat should be of neutral tint. When you reach your shooting ground (a creek or bayou with weeds, lilies water lettuce, logs, and stumps along the shores), one man should sit near the bow in such position as to be able to shoot quickly and with little motion; that is to say, he should face diagonally toward the shore near which he expects to see turtle, and with rifle ready, examining the willows and noting every unusual appearance along the edge of the weeds which he is passing, and also giving a glance forward now and then, as he may get a shot at some turtle fifty or sixty yards up stream on a log, and which would not allow him to get any closer. When he sees the head of a turtle half hidden among the weeds, if he brings his rifle up quickly the turtle will be yards away before he can fire, but he must raise it very quickly, as little motion as possible, and the instant that he covers the head, fire, and if he can't see the head, (as the motion of the boat may have brought leaves across the line of fire), but can see where he thinks the body is, then let him fire, and immediately take the pole and stand ready to hook up the creature as soon as the bow of the boat reaches the spot where he sank. Of course no noise of any kind must be allowed, for you often hear a turtle draw in his head, or great care must be taken to have nothing in the boat that can rattle. The paddler's duty is to keep the boat close to the weeds without letting it rustle against them, to paddle quietly, to keep on the look out for turtles, and on seeing one, to put the boat in the most favorable position for the shooter, to check her as much as possible without noise, and on the shot being fired, put the bow of the boat as quickly as possible over the spot where the turtle sank, and keep it there while the shooter feels for and hooks it up. He must be constantly on the watch for a sign from the shooter, as he being in the bow, will probably see the turtle first. If the boat should pass a turtle and the paddler be unable to attract the shooter's attention without scaring the chelonian, he may use the pistol. Even on windy days there are among the tortuous creeks sheltered places where one may lie in wait, and also where the turtle strikes a turtle down he goes. If you wish to avoid snoutstroke, keep a wet hilly pad or two in the top of your hat. If you see the turtle's back only, try to fire at such an angle that the ball will range toward his head; if it ranges toward his tail, you will lose four out of five. You had better look for a turtle for half an hour (as one of my friends did last Winter and got him) than to go in after him; for if he takes hold of your limbs you will have no pleasure in him, getting out with thirty pounds of live turtle hanging to your finger bone; putting his head out of the shell and holding it there while some one cuts it off; and even then you will not get off much easier. Moreover, the bottoms of many of the Southern creeks are so dark, and the waters so full of impurities, that you can see nothing when you go down, but an amber colored sheen, if the sun is shining. So you will have to trust to feel your way with the stick, and the hands of your moccasins, alligators, sharp snags, and the turtle's strong, sharp mandibles, is not sufficiently encouraging to warrant the attempt, particularly as you will fail to find the turtle in three cases out of four, when you cannot feel him with the hook. An old soft shell will sometimes have quite a quantity of moss growing on its back, and I am told that this holds good as to the others, but have never seen it.

For Forest and Stream.

SPORT IN THE BROWN TRACT.

WE had been paddling slowly up the river, (the Beaver,) all day, fishing at the numerous spring-holes, and as the night closed in, we found ourselves at the "Branch," pretty well tired out and ready to camp anywhere. We were so far from the shore that our boats landed. A fire was soon kindled on the bank, and our fish (of which we had a pretty good string) cleaned, and after a short discussion it was decided that myself and two companions, with Asa, our guide, should go to Uncle Chauncey Smith's cabin, over a half mile "carry," while our second guide, Danfred, with our fourth man, should "float" as far as Little Rapids in hopes of obtaining a deer, and we would sleep without cover, which was not very pleasant to think of, as it looked more like rain every instant. Our guide lighted a candle and started off, we following in Indian file. The way was rough and the light from our single candle cast but sickly rays on the path. And we stumbled on, now slipping on some stone, overgrown with moss, or falling headlong over the trunk of some prostrate tree, or being driven across the path. After what seemed the longest half mile I ever walked, the cabin of Uncle Chauncey here in sight and our "Jordan" was traveled. As we caught sight of the old log-house, standing in the clearing, far away in the wilderness, we hailed it as a "haven of rest," glad enough to have got over the infernal "carry" without breaking our necks.

This cabin was erected by Uncle Chauncey Smith, and here he has spent his whole life, and he has been here for the last fifty-five years. It stands on the road opened through the woods to the shore of Lake Champlain, which was built in the hope that people would come in and settle. But they didn't, and consequently the bridges are down most of its entire length, though I believe this last Summer the bridges have been rebuilt as far as Little Rapids, some three miles from here. But very likely when the spring freshets come, they will be carried off, and parties coming up the river will have to go as usual by boat. The land has been cleared to some extent around the house and some few vegetables were raised here, but it is fast growing up again to a wilderness, and unless some one comes here to live, (which is not very likely,) it will soon be back to its original state. The place is not an inviting spot for camping, although a great many parties seek its shelter, as it saves building a tent, and the structure is so close about with shingled roof and a rear part with bark roof, and stands close to where the road crosses the branch; so much for the outside.

Pushing open the door to the main building we enter. It

certainly is not very inviting. Everything smells mouldy and it looks dirty. An old stove, on which were set, stands at one end of the room, while the middle is fringed by a round, board table with seats. A match, one or two old candlesticks and a few old broken dishes stand on it, and from pegs driven into the wall hang old powder horns, minus the powder, rusty guns, frying pans, and all the odds and ends that could be thought of. Leading out from the back of the room are two closets or cellars, with bunks like a steamboat, with dirty ticks filled with hay and covered with damp and mould. In the rear we found some bunks filled with freshly cut hay from grass which grows around the cabin, and as the glass was out of the one window in the room, the air was much better. There was also an old stove in this room, and as the punkies and mosquitoes were plenty, we started a smudge in the hopes of smoking them out.

Going back to the front part Asa soon had supper cooking and the savory smell of trout and coffee filled the room, and we were soon stowing away our evening meal with keen appetites. After supper pipes were lighted, and sitting around the old stove we listened to our guide while he told us yarns connected with his life. For nearly forty years he had been more or less in the woods. Not a place but what he had visited, and the moose, deer, bear and wolf were all known to him. In the rear we found some bunks filled with freshly cut hay from grass which grows around the cabin, and as the glass was out of the one window in the room, the air was much better. There was also an old stove in this room, and as the punkies and mosquitoes were plenty, we started a smudge in the hopes of smoking them out.

Helped him the road through the woods, and the moose were as plenty as deer then, and many a one fell before his unerring rifle. But the pipes were smoked out at last, and wrapping our blankets around us we were soon in the land of dreams. In the middle of the night we had a tremendous thunder storm and I awoke to find the water coming down in a shower on my head. Unfortunately I had lain down under a hole in the bark roof, and only discovered it when pretty wet; but I was too lazy to move much, so drawing my rubber blanket over me I let it rain and soon went to sleep again. In the morning, after a hearty breakfast, our guide returned to his boat, which he was to paddle up to the rapids, while we three were to walk three miles by the road to the same place. When we got to a certain place, designated by Asa, we were to leave the trail and strike off to the left to the river.

The morning was lowering and close, and the air was alive with winged varmints, who settled down on us in clouds. The grass and bushes which lined the road were very wet, adding greatly to our discomfort.

At last we reached the path from the main road, going off towards the river. The trail was rather blind, in fact so blind that we were a little doubtful, but we concluded to try it, and now the way was rough, and indeed trees were lying across our path in every direction. The trail grew more and more obscure and at last was lost on the edge of a swampy piece of ground, but we kept on, some of the time in mud and water up to our knees, and at last we heard the roar of the falls, and raising our voices, soon heard our guide answering. At last we reached the river, and were soon ferried over, and rejoined our companion at the camp. He and Danfred had been out all night in the rain, "sorely deer" had they seen, but they had secured four nice ducks, besides the ducking they got by the rain. If there is anything that will give a man the "blues" I think it is a rain storm in the woods, especially if you have a poor camp, as was the case here.

Once more taking our boats we were soon on the "level," and had about the most comfortable fishing. We took all the trout that we could use to advantage, and embarking, resumed the paddles. Soon we arrived at another series of rapids, up which the guides waded with the boats, whilst we walked over the mile carry. We amused ourselves as best we could till the boat arrived, when once more we were sailing up the lower outlet of the lake, which, being full of rocks and stones, made slow going, but at last we struck more open water.

What a beautiful scene it was, that lovely sheet of water, lying so calm and still, with the green foliage environing it to its very edge. The clouds had rolled away and patches of blue sky were peeping out here and there. The water lilies were in full bloom, making their aid redolent with their sweet perfume. The mosquitoes and flies gave us little trouble for the first time since we struck the woods. As we landed slowly up the lake, the evening shadows came in on us, and we must find a camping place for the night. Danfred said there was one just above on the left hand side, with a good spring handy, so we concluded to try it. We ran our boats into a small stream that came down through the lilies, barely wide enough for a boat, and landed. I followed the path up through the "second growth" and reached the camp, or rather where the camp had been, for the place was burned over, and the trees were all gone, where the boys were busy unloading, and Danfred suggested tying our rubber blankets together and making a frame work of poles and covering it with them, as that would keep off the dew. So at it we went, and soon had a comfortable shelter over us. Cutting some young raspberry bushes, which grew in profusion around the camp, we made us some good beds. A fire was soon crackling in front, and while our guides cooked our supper, we sat reclined on our blankets, or lent a helping hand. The meal ended, we gladly retired to our blankets, and one by one dropped off into "dreamland," but somehow the more I courted the "God of Sleep" the wider awake I grew.

At last a loon gave us a little touch of melody, and as his morning laugh came floating over the lake it started my homelick companion, who was just snoring melodiously.

"For God's sake what's that?" he exclaimed, starting up on his elbows.

"Only the cry of a panther around the camp, and as you sleep on the outside you will be the first victim."

Mean, wasn't it in me? but, then, I could not sleep and wanted company.

"Is your rifle loaded?" said I. "If not, you better put in a charge and let him have it he comes too near."

Then he took out another shot, and regular "blood freezer." This time my friend started to his feet, thoroughly frightened, and thinking I had carried the joke far enough, I calmed him down and quiet was once more restored.

I lay awake listening to the wind sighing through the treetops, and at last dropped off into slumber, which I had so long wished for.

F. B. Hartford, Ct., 1874.

CARS! We have received from our Florida correspondent, Fred Beverly, the skin of the panther which he mentions in his article of Dec. 17th, as having been shot by him during a recent Winter campaign in Florida. The animal measured eight feet in length when alive.

Fish Culture.

**This Journal is the Official Organ of the Fish Cultur-
ists' Association.**

REPORT OF THE MAINE FISH COMMISSIONERS.

WE are indebted to E. M. Stillwell, Esq., for this report, to which we referred to last week. It is quite valuable as showing the progress of fish culture in that State. The following summary will probably embrace all its essential news to the general reader, but we shall have occasion to refer to it again:

"Our rivers are capable of being so stocked with salmon by yearly contributions of young fry to their waters, that no protection would be needed, but simply fishways to allow the grown up fishes to ascend to their utmost tributaries, that all, from the river mouths to their inland fastnesses, might have the opportunity to catch and consume."

Two hundred thousand salmon eggs was our dividend from \$700 invested in the Buckstop Breeding Works. In addition, 250,000 eggs were placed to our credit as a gift from the United States Government, through her Commissioner of Fish and Fisheries, Prof. Baird, making a total of 450,000 eggs. These were distributed and planted in several localities in the State. The reports that have been received from the rivers and ponds where the salmon fry have been planted are of the most favorable description. More legislation is needed to protect the young fish.

The Commissioners give a condensed description of land-locked or fresh water salmon, and its "habitat." As table fish, they are of a richer flavor than the sea salmon; as game fish they have no equal. The Commissioners speak very particularly of the blue-black trout as a stock fish, to be put into ponds, to afford an unlimited supply of food for trout and land-locked salmon. It is a great mistake to allow these fish to be taken at all; as the great size of the Rangely trout is to be attributed mainly to them. The blue-black is to Rangely what the myriad of smelts are to Sebago Lake and Reed's pond. It is thought that these fish can be advantageously introduced into all waters that are stocked with trout or land-locked salmon.

In the autumn of 1869, several ponds were stocked with black bass, and the fishes have grown and multiplied wonderfully. There are abundance of these fishes in all the ponds in which they were placed, but the commissioners are not always successful in being able to find parties living near these ponds to catch them, at reasonable prices. As the case is now presented, the best method is to purchase of dealers in Massachusetts, and have the fishes delivered at the desired localities here.

Five years ago, the Commissioners of Fisheries for Maine made the attempt to have fish-ways constructed over the dams on the Presumpscot River. Their efforts and the wishes of the people were defeated by the determined opposition of the mill owners. The case was taken to the courts, and the commissioners in behalf of the State triumphed, but the fish-ways are not yet built.

At the expiration of the statute of limitation exempting the owners of the Augusta dam from the execution of the law enforcing fish-ways, the Fishery Commissioners were solicited for an immediate enforcement of the law. A notice was served upon the owners and occupants of the dam, and the Fishery Commissioners were duly notified. When the survey was made by E. A. Brackett, the engineer whose patented fish-way it was proposed to use, the Hon. James W. North, Mayor of Augusta, and Col. DeWitt, the representative of the Messrs. Sprague, were present. A thorough explanation of the intended fish-way, its location, place of entrance into the canal, all was talked over, and the Fishery Commissioners were satisfied that as soon as the plan could be got ready, they were served by an officer, with an order requiring the fish-ways to be constructed according to plan and specifications annexed, by the first day of September, on Col. DeWitt, who represented the mill owners as their agent and engineer. On the 28th of October, the fish-way not being constructed, the Fishery Commissioners issued a writ of mandamus in the order of the Commissioners, the matter was placed in the hands of the County Attorney and the mill owners were indicted by the Grand Jury.

Two fish-ways have been finished in Machias, and another will be built.

The Commissioners urge the necessity of a more uniform system of fishing laws for the State, especially in the matter of close time; the punishing of offenders who hang around the wafts and wantonly destroy the fish; that no charter be granted for the construction of any dam on brook, stream, river or outlet of pond, without making it imperative on the parties or applicants that they build a fishway, and a more rigid enforcement of the law forbidding the throwing of sawdust and other waste into rivers.

The report closes with a summary of the year's operations at the Bucksport Salmon Breeding Works, under the direction of Charles G. Atkins, formerly fish commissioner. He placed in the pond, this year, 590 living salmon; but from this small supply of breeding salmon were obtained a larger number of eggs, and at a lower cost than ever before.

The whole number of salmon of all kinds recaptured, was also much greater than in former years. The 590 salmon placed alive in the pond in the Summer, were reduced by known deaths to 562, and of this number 493 were caught in the fall. The losses were \$4,000. Total number of eggs taken, 3,039,000. The cost of the season's work up to the time of distributing the eggs (March next) may be estimated at about \$6,000, which gives \$2 per thousand as the cost of collecting, developing and packing the eggs. When compared with the cost in previous seasons, this shows a very satisfactory saving. The economy in the face of a larger number of breeding salmon purchased and of a higher price paid for them.

On the 28th day of October there were received 100,000 eggs, which had been shipped by Mr. Stone, of California, nine days before. On unpacking, the temperature of the interior of the box was found to be 70° F., that of the air, at the time and place being 50° F. As might be expected, the inner portions of the package were in a very unhealthy state and very few of the eggs therein proved good. Those eggs in the outer portions of the package were however, in

very good condition. The whole number of bad eggs picked out to this date is 62,600. Of the 37,400 remaining, about one half are hatched out, making for the most part strong, healthy fish.

* AMERICAN FISH CULTURISTS' ASSOCIATION.—The next meeting of this association will be held in New York, February 9th, 1875, at No. 10 Warren street. As the past year has been one of activity and progress in the science of fish culture, it is expected that this meeting will be one of the most interesting and instructive ever held by the Association.

MEDAL TO SETH GREEN.—The New York State Agricultural Society has presented an elegant gold medal to Seth Green. It is over two inches in diameter and very heavy. Around the edge are the words "New York State Agricultural Society," inside is a wreath of corn, wheat, &c., containing the inscription, "To Seth Green for his services to the State, in fish culture. Rochester, 1874." On the reverse is a figure of Ceres. It is a very elegant affair, and the greatest beauty of it is, it is well deserved.

—T. C. Bergen, of Bergen Park, Jefferson county, Colorado, is constructing a fish breeding establishment at his place, with a lake containing an area of seventy-five acres. When the lake is ready it will be stocked with Bear Creek trout, and as these are already acclimated, good results may be looked for. Fish culture, at no distant day, is destined to be an extensive and profitable industry in Colorado.

THE SPAWNING SEASON.—Here are some timely words printed in the *Western Rural* from Dr. W. A. Pratt, of Elgin, Illinois:—

"We are now in the season for the spawning of the trout. Many people over the State as well as in other States have built hatching houses and are intending hatching their own trout eggs. There seems to be a larger interest now taken in fish culture than ever before; but from all appearances Colorado Territory is taking the lead. From descriptions the water is much more abundant there than here in Illinois, or adjoining States, and to get a description of water, as I do from Colorado, would almost make one dissatisfied with his own home, especially if he is a lover of fishing or fish.

The season for spawning of the salmon trout is now past, and their eggs will commence hatching next month; it requiring nearly the same length of time that it does the trout, or from seventy to eighty days, according to the temperature of the water. White fish are another Fall spawning fish which grow in our fresh water, but it requires only about half the time to hatch a white fish egg that it does those of trout.

Perhaps a word in relation to building trout ponds may be a benefit to some. Many persons have had trouble with crawfish burrowing through their dams, where they have built these dams of clay, or from a muck soil that does not allow the hole to fill up after the crawfish has burrowed through; and a leak once started only grows larger in a soil of this kind.

If the graves cannot be got, a brick wall of four inches, laid up in the centre of the dam, will prevent crawfish from going through; but where gravel can be secured it is far preferable to an embankment, as anything burrowing in the gravel, the material fills up after them, and if but a slick covering of gravel, say two feet, can be put on the side of the embankment, it will be found equal to all emergencies. If mink or muskrat should give trouble, the bank should be coated on both sides with gravel, as neither of these animals will burrow in this material.

A matter of great good deal of importance to those who are hatching young of the trout eggs is: Secure the spawn from early spawning fish, as the eggs from these bring fish that spawn early, and it is much pleasanter handling trout eggs in the early Fall, than in December and January, to secure one's eggs, as it is anything but pleasant to have the hands in the water for an hour or two when the thermometer is down to zero. And now a word in relation to trout eggs; they cannot be shipped for some thirty days after being taken, and unpermeated. To move trout eggs ten days

taken and impregnated. To move trout eggs ten days after being impregnated, ten miles, would result in a loss of 90 per cent.; but trout eggs thirty days after impregnation will stand a ten days' journey, properly packed, with a loss of but very few.

—P. B. Dons, Esq., one of the Maryland Fish Commissioners, placed a large quantity of salmon a few weeks ago, in Marsh Run, Maryland. Since that time he has stocked the Conococheague, near Jagersstown, with 7,000 salmon. We trust that the experiment will be successful. In regard to the salmon placed in the Delaware two or three years ago, we have heard nothing this year that would indicate the success of the experiment; but why it should fail in such a river, apparently so well adapted to salmon, we cannot imagine. —*Germanstown Telegraph.*

LEESBURG, VA., December 26, 1874.

EDITOR FOREST AND STREAM:—
The experiment in fish culture here is dragging its slow length along. The filters, aqueducts, and a carbonized hatching trough have been made, and will be down, we hope, by the 3d or 4th of January. The spring to be used has a temperature of about 52° all the year through, and has had trout in it for two or three years. It will fill all the year a pipe three inches in diameter. We mean to make three plank ponds, small, but large enough, we think, for 200 or 300 breeders, 500 or 600 yearlings, and 600 or 800 fry. T. W.

—Our excellent contemporary, *Der Weidmann*, of Leipzig, Germany, contained some spirited hunting sketches last week. One, the boar chase, was described in the most graphic manner, and the article was illustrated in a manner worthy of any enterprising journal. This is one of the most valued of our exchanges, and is in every way worthy the support of sportsmen.

—A bear was recently shot at Uxbridge. It was of immense length, but was evidently half starved.—*Toronto Globe.*

[Yes; he was very long—without food—ED. F. & S.]

Natural History.

ROAMERS

THERE have been a number of Southern birds killed far beyond their usual Northern and Eastern limits this year, and two of them deserve especial mention for the fact that they hardly come within the term "occasional visitors" to the region where they were found.

A canvas back duck, (*Peleutus valisineria*), was shot from a boat on the day of the 10th of July in a lake near Casco Bay, within three miles of the City of Portland, Maine, a red headed duck, (*Fuligula ferina*), being obtained from the same flock, which was approached on the water by a sailboat. Both these ducks were males, the red head being in very good plumage, and the canvas back was apparently a young bird; they were killed in October

in Cumberland county, Maine, a common variety, (*Cathartes aura*), or turkey buzzard, was caught, in a trap, and kept alive for many weeks, finally coming into the possession of Lincoln Daniels, Taxidermist, of Portland, who killed it, and now has the skin mounted in a most artistic manner. And in this connection let me speak in favor of those much maligned birds, the turkey buzzards, so seldom properly shot and so frequently abused. Their main "sting" is their voice, which appears to pitilessly remind the owner of the fact that sometimes when caught, or suddenly alarmed, they disgrace their food, which food gives forth a strong and disagreeable odor. The scent of the bird is no stronger than that of a crow; nor is it so disagreeable to my olfactory nerves as the scent of that noble bird, the eagle. Compared with our National bird, the turkey buzzard appears to me as a vulgar, common, and unattractive creature, in appearance, and not noble in character; having great strength which he uses as a tyrant, he does not hunt for food if it can be obtained by robbery, nor will he make an effort to capture living game if dead can be found. I once saw an eagle alight near the body of a skunk which had been dead many days, and commence a meal therefrom, being interrupted, however, by my attempt to approach. I have seen a buzzard, however, make a fine effort to catch an eel; and caught in a small stream which was "alive with them," at a place where the water was so shoal that the eagle did not immerse its body, nor drop from above as does the osprey, but flapped along close to the water's surface with dangling legs, and finally succeeded in picking up a large eel in a most awkward manner, from among the myriads which had been packed up in the water.

It is a little while at the time immense numbers of eels were driven into this stream by the abundance of bluefish at its mouth; (and a stuffed eelkin was very taking in trolling for bluefish.) Against this one instance of an eagle getting a fresh dinner honestly, I have witnessed many times a robbery, or attempts at such, by eagles, and will mention one incident in which the coward was de-

One day in Spring as I was standing on the shore of a lake, (now drained by the people of its vicinity, pond, although upwards of six miles in length,) my attention was attracted by the loud and repeated cries of a loon, or great Northern diver, (*Columbus glacialis*), but not perceiving the bird brought into requisition a small spyglass in time to see the loon disappear under water; and at the same time an eagle, (the great horned owl) flew by within six rods of the loon. The presence of the eagle tended to confirm my first impression that they were alarm notes which the loon had sounded, and not a call to its mate; and I watched with the glass, interested to ascertain the cause of apparent alarm that a loon might have at the sight of an eagle, thinking that possibly the loon had been overtaken by the eagle, and was flying away very early in the season, (April). The loon reappeared, and quickly proceeded to fish without changing its location. After repeatedly diving it was finally successful, as I judged from its movements, the distance preventing me from seeing if there was a fish held in the bill. The eagle had remained motionless, and I was so intent on watching the loon that I did not notice its action, when suddenly he appeared, making a swoop at the loon, rising again into the air and repeating the attack, while the loon, instead of diving and thus avoiding its foe, with raised body and extended wings, beat off the assailant, who, after several attacks, being vigorously repulsed each time, retired in defeat. During this unusual and interesting scene, I was in doubt as to what I believed that there had been an encounter previously, when my attention was first attracted by the cries of the loon.

I relate these incidents to show "what's in a name?" for the eagle has been much exalted in poetry and history, and I have heard many persons avow that they would never kill an eagle, because "he is such a noble fellow, and our National bird you know." Although not attempting to exalt the vulture, I would save him from abuse. Vultures are not more "filthy" in person than eagles, and the results of my examinations of each show that the former are generally less infested with vermin, and that the latter are not more dainty in choice of food, nor is their flight so graceful as that of the turkey buzzard.

To this day it is the popular (and most erroneous) belief that vultures feed solely from carrion, and discover their food by the sense of smell. I believe that they cannot discover food by the sense of smell. That they are guided to

at by their bigness of sight is a fact well known to naturalists; and they will discover a freshly slain animal quite as quickly as a putrid one. Once discovered, they never wait for meat to decay, which would be but a short time however, in a Southern climate, ere commencing a meal. I have left freshly killed game, and on the next morning have found it all eaten. I have also seen vultures feed less than two hours after a kill, and the vultures had discovered it and torn out the entrails and bits of meat from the most accessible parts: although not a vulture was in sight when I left, yet, as I approached I saw a dozen of them about the game, and many more winging their way towards it. These birds fill an important part in nature in a climate where animal life is abundant, and a dead body so soon taints the air if not removed. The vultures are scavengers of the land, as are the gulls of the sea. I have many times seen wounded gulls disgorge their food, as also various other species of birds, and cannot say which is the worse or more disgusting. I have seen a hawk swallow a snake, and in the same country seen the feet and heads of vultures may be seen for a stretch owing to recent contact with carrion, but this odor is quite unlike the natural scent of the birds themselves. I have had the pleasure of convincing many

persons of the fallacy of their belief that the natural scent of the common culture was a "horrible stench," by evidence of their own senses. It is not very remarkable that in this case popular hearsay has become a quite universal belief, as these birds are very seldom killed or examined. Several gentlemen, one of them a sportsman, called on me one evening to see the result of a day's shooting, and I called their attention to a fine turkey buzzard that was hung apart from the game. At first they refused to approach it, but after some urging and assurances on my part, they examined it, and exclaimed, "that is the first turkey buzzard I have ever seen that did not stink."

"But," I asked, "did you ever before examine one?"

"Well, no, I believe not, but have always heard and supposed that they were stinking, filthy birds, but this one smells no worse than a hen."

The above reference to eagles applies more particularly to the most common variety, the white-headed eagle, (*Haliaeetus leucophthalmus*). But as like Partridge, or "some other fellow," says, "comparisons are odorous." In addition to the two "Roamers" mentioned, I have seen an American widgeon, (*Anas americana*), several ruddy ducks, (*Fuligula rubra*), and a lesser scaup duck, (*F. marillodes*, and *F. affinis*) Baird, that were killed in Maine in October last.

The canvas back duck very seldom comes so far East, although red heads are occasionally shot in Maine, and as far East as Nova Scotia and New Brunswick. I know of no authenticated instance of a culture being seen so far East and North as Maine previous to the one above mentioned, and deem it an incident of interest to naturalists.

Dec. 11, 1874. ROAMER.

SALEM, Mass., December 27, 1874.

EDITOR FOREST AND STREAM:

A specimen of the *Porzana carolina*, Sora Rail, was seen on the edge of a pond near here last week. Those who saw it tried to catch it, but did not succeed. Is not this rather late for them? TEAL.

CENTRAL PARK MENAGERIE.

DEPARTMENT OF PUBLIC PARKS, {
NEW YORK, Dec. 27, 1874.

Animals received at Central Park Menagerie for the week ending December 26th, 1874:

Five Olive Baboons, *Cynopithecus anubis*. Hab. West Africa.
Two Guinea Baboons, *Cynopithecus cyn. spin.* Hab. West Africa.
Four Moustache Monkeys, *Cercopithecus cephus*. Hab. West Africa.
One Macaque, *Macacus cynomolgus*. Hab. India.
One Horned Owl, *Bubo virginianus*. Presented by Dr. E. Sterling.
W. A. CONKLIN.

CROPS, GRASSHOPPERS, &c., IN KANSAS.

Many inquiries of late have been made to us, in relation to the present scarcity of food in Kansas. According to the best means of knowledge concerning the real distress in that State, we think the reports exaggerated. While the devastation by the grasshoppers this year has been almost overwhelming, we should by no means set down this visitation, dire as it is, as the only cause of the present state of scarcity in Kansas. In many portions of the State, as we learn from several letters before us, much suffering has arisen in consequence of the drought. This is to be looked upon as one of the usual natural contingencies of climate. This affords cause for alarm, as to the full ability of the country to yield its natural products to the management of skillful agriculturists of only common intelligence. With our deep, rich soil, its beautiful climate, with its unsurpassed capabilities as a fruit raising country, and for the growth of any cereals, the good citizens of Kansas should never for a moment be discouraged at a temporary failure of some portions of the harvest. Even the visitation of the grasshoppers, troublesome fellows as they are, must have an end. Basing our opinion on letters from our correspondents, we are of the opinion that a want of provident foresight lay at the foundation of much of the real want now felt in Kansas. Two years ago very bountiful crops of corn were raised; for a very fair estimate we can set down as the aggregate 30,000,000 bushels. Instead of garnering this corn for the future wants of its inhabitants, what did they do with it? As coal was a little higher than corn at present, many persons with a reckless disregard of future consequences, burned their corn for fuel! Last year the crop was considerably less than the year preceding, but still sufficient for the home consumption of all the inhabitants. Much of this crop was fed out to immense herds of Texas cattle, which were taken into the State to winter. Not only was a large portion of last year's corn thus consumed, but that of this year was largely fed to cattle while it was yet in the "milk" or green ear. The unusual drought and the grasshoppers completed the sum total of the ills of which our Kansas friends so feelingly complain. Other considerations could be named as drawbacks to immediate prosperity. There are still cattle there in great droves, and they must be fed. On the other hand, in some parts of the State, the wheat crops have been very good, breadstuffs are cheap, and good flour can be had for six dollars per barrel.

ANSWERS TO CORRESPONDENTS.

MARY LINWOOD, Swampscott.—We shall give a paper upon the cultivation, history, and other matters relating to this tuber, in its proper season. As many of your inquiries are embodied in the annexed slip from our scrap book, we commend it to your notice:—

"The dahlias, when introduced into Europe in 1787 by the Swedish botanist, Andreas Dahl, who discovered it among the Mexican flora, was more prized on account of the supposed culinary value of the roots and leaves than of the beauty of its blossoms, which resembled a small sunflower with red or yellow petals. When this view of the plant was proved to be a delusion, it was long eclipsed as a garden ornament by the hortensia, for which a rage long existed; but in 1814, when the horticulturists had taken the matter in hand, dahlias, as we now know them, made their appearance in the shape of globes of the richest coloring. The flower then occupied for many years the very highest place in the floral hierarchy, and no garden was complete without some of the new varieties which yearly appeared. A reaction, however, set in, chiefly owing to the exorbitant amount of leafage which these plants possess. The failing may, however, be reduced to its minimum (observes a French authority) by training dahlias against walls, when,

according to his experience, they bloom with exceptional luxuriance, a hint well worth taking by those who still cherish a regard for the flower which reigned supreme during the first half of the century."

L. JONES, Long Island.—Cranberries will grow upon high land, and bear good crops. We know, as you say, it has been said that cranberries cannot grow on high land. This is a mistake, as our own personal observation testifies that a good crop can be obtained upon ground of only moderate dampness. In 1870 I visited a cranberry plot of ground in Islip, Long Island, and saw a very fine crop growing. The particular method of the cultivation of the cranberry upon various locations will be treated in the early Spring time in this paper.

The Kennel.

THE WHEREABOUTS OF THE GILDERSLEEVE SETTERS.—We have had many inquiries lately as to where the blood of old Gildersleeve Tip, of Canterbury, Delaware, so noted in her time thirty or forty years ago, can at present be found. We have therefore prepared a table, or family tree, carrying down the stock to date. No journal excepting our own, we think, can impart the following information, as we have been the first to condense and compile the work from different sources. There may be more of the Gildersleeve blood living at present; but it cannot be reliably recorded: What we give is published as facts.

---	---	---	---	---	---	---	---	---	---	---	---	---	---	---	---	---	---	---	---	---	---	---	---	---	---	---	---	---	---	---	---	---	---	---	---	---	---	---	---	---	---	---	---	---	---	---	---	---	---	---	---	---	---	---	---

subject, as to their points and utility for sporting purposes. My breed are from twenty-one to twenty-two inches high at the shoulder, are close curled all over the body; color, very dark liver; tail thick at the root, and tapers to a sting at the point, free from feather underneath; the legs are well feathered all round; the head is strongly built, looking as square as a cart horse, when adult; the head is larger than, in most other spaniels, with a rich, dark brown eye face from the eye to the nose perfectly smooth; the head is crowned with a large top knot, which is one of their principle characteristics; ears from twenty-four to twenty-six inches long from point to point, but in a very good specimen they will measure thirty inches, or even more. They are high-natured, courageous dogs, that will jump from any height into the water, and face it in the coldest weather as often as any reasonable man would let them. I consider that where a sportsman only keeps one dog, and where his bag may be made up of, say a dozen kinds of game, an Irish water spaniel is the most useful, as they will hunt well, keeping within easy distance, they will drop to wind or shot, and retrieve your game as readily as any other breed. For wild fowl or partridge shooting they are invaluable, and can stand the severe cold without injury, seldom contracting rheumatism, on account of the protection afforded by their oily coat. They will live in water, and dive like ducks, either after wild fowl, or anything thrown in for them. As a companion for man, they are not to be beaten. I could relate numerous stories of their sagacity and tricks, but must not take up too much of your valuable space. Suffice it to say, that they are good guards, may be trained to act as valet, errand boy (if you will allow the term) and anything that any other dog can be taught. Just one fact and I have done. Some years ago I was walking out with a friend and an old dog named Bontavain. To let my friend see some of the old dog's tricks, I, amongst others, put my hand on the dog's head, and he came down to me, and after walking on over a mile we sent him back for it; a man who was breaking stones on the road saw him go back, and guessed that he was sent for something we had left, as he returned with the knife. The man layd him, throwing the dog some of his dinner which he had with him. Bontavain put the knife down to eat the meat, which the man as quickly picked up and pocketed, but when the dog had eaten the food he looked round for the knife; not finding it, with something more than instinct he understood how matters were, and going to the man he reared himself up against him, growling very meaningly, until the man got so frightened that he threw the knife on the ground, glad to get Mr. Bontavain to retire quick, which he did, bringing the knife safely to my hand.

BEAGLES.

LA GRANGE, MO., December 21, 1874.

EDITOR FOREST AND STREAM.

I send in your paper a good many inquiries for beagles. The best way to obtain one would be to get in communication with the master of a pack in England, and draft from his pack. Kent is the best country in England for them, and I have known of a pack there all under eleven inches in height and perfect at their work. A beagle may be quite a good sized dog, or very diminutive; the smaller, if healthy and well trained, are the most valuable. Any one who writes for beagles for the country should distinctly say, rabbit beagles, in contradistinction to the beagle used for hunting the hare, which in England is crossed with the harrier.

E. W. H.

For Forest and Stream. ON THE DEATH OF "DASH," THE CHAMPION OF AMERICA.

THE famous old hero has gone to his rest, and we will welcome him here never more; He has hunted his last, and he quietly sleeps, While the hearts that have loved him are sore.

No more will he answer his master's caress,
No more will he waken his pride;
With a break in his voice, and tears in his eyes,
He will tell now the old dog has died.

How lonely he'll be without his old friend,
How deeply for Dash will he mourn;
And saddened will many a sportsman's heart be,
When they hear that our champion has gone.

His fame will live after him many a year,
(Old hero, so faithful and brave);
And his memory will ever be green in our hearts,
As the grass that grows over his grave.

Farewell! dear old friend! The last, sad good by
Has been said, and you're now of the past;
Your mission fulfilled, you have laid yourself down,
And solved life's enigma at last.

December 11, 1874.

Sea and River Fishing.

FISH IN SEASON IN JANUARY.

SOUTHERN WATERS.		
Pompano.	Trout (black bass).	Sheepshead.
Snapper.	Drum (two species).	Tailfish.
Groupers.	Kingfish.	Sea Bass.
Fishkill.	Striped Bass.	

FISH FOR MARKET.—Codfish is still abundant at 8 cents per pound, as the Long Island fishermen are yet doing a good business. Halibut is down to 20 cents per pound. Blue fish from Norfolk, Virginia, is coming in profusely, and sells at 10 cents; striped bass from the Hudson River and Newburyport, Massachusetts, brings from 18 to 25 cents per pound, according to size. Snails are so common as to overstock the market; they come from Maine, retail price 15 cents per pound. White perch is abundant at 15 cents; king fish, from Key West, at 18 cents; Spanish mackerel, from Florida, at 50 cents; Sand, from Savannah, which is profuse enough to supply the demand, bring \$1 each, though few will exceed two pounds and a half in weight. Red snappers, from Savannah, sell at 20 cents per pound; and hardshell crabs at \$2 per 100, while the soft shell variety bring \$1 per dozen.

Probably the greatest catch of eels on record is at made by Reeves & Aldrich's seine in Shinnecock Bay a few days ago. The bay had been closed for some time, and when the seer broke over the beach, the eels started for the salt water, when the seine was cast and 2,500 dozen were taken at one haul, 150 dozen of which weighed at least three pounds each. During the night over 4,000 dozen were taken.

Large numbers of eels are being caught in nets about the shores of Staten Island. They are readily sold in the New York market at from 10 to 12 cents per pound.

Now, concerning eels, we have a story of our own to relate:

BRANFORD, MINN., January 15.
An exchange says: "A Minnesota flour mill was stopped the other day by a gorge of fish, and four tons of them were removed; the boys never have to spit on their bait in Minnesota."

This extract brings to mind a somewhat similar instance that occurred years ago on the stream where we were raised, the Norton Creek, in Lower Canada, only in this case the fish were eels on their annual fall migration to the salt water. The mill was old fashioned, bucket-rigged, undershot power, and at the time, ten o'clock at night, was running with a full head on. Boy fashion, we were leaning over the hopper, asking questions of the good natured Mr. McGilton, now of Burr Oak, Wis., when the rapid motion of the buzzing stones began to lessen sensibly. Pushing down the gate and letting the full power on, started them up again for a few moments, but they began to go slower and slower, till finally they stopped stock still. We were at his wits end. We oiled the wheels, they raised and lowered the gate, but no use; the stones would not revolve, and with a lantern we descended into the wheel room, and then by a ladder into still lower depths, a horrible place, that always reminded us of those fearful "bone orchards," the catacombs of Rome, a foul-smelling, slimy, damp, musty place, sixty feet long by twenty to thirty wide, and three feet deep below the wheels with dead and withering eels, crushed by the cogs of the wheels as they passed through it. The wheels were gorged full, every bucket had all it could hold; above the wheels, the water was alive with the crawling creatures uninjured, and the "race" above the mill, a stream six to eight feet broad, was full of eels, till it struck the broad river, twenty rods above. The water was running over the dam, and how many got safely down stream cannot be computed. The rush was over by daylight, and the miller and his men assisted (by all the boys in town, went to hoisting the game from the lower docks into daylight. They filled a large store-room four feet deep with eels, about half of them bruised, but in very good order. Word was sent to the different villagers near by, and about noon the *habitués* in their little two-wheeled carriages began to arrive. The word was given, "help yourselves," and such a jabbering of French, such a slashing among the eels, such a confusion of opinions, such a noise, not been heard or smelt before or since around that isolated little town.

This is a "fish story," but it is as true as that the old mill stands on its solid rock foundation yet; as true as that the Norton creek (the stream on which we first wet a line) still rolls its amber-colored current to the St. Lawrence, and many middle-aged Montreals—boys then—will remember the facts and the incidents of the "eel fresher."

HAVLAND.

—The Islip oystermen report that oysters are rather scarce this season, but unusually fine.

—During the last whaling voyage of the barque Nile of New London, a whale was captured, in the head of which was found the head of a Scotch gun harpoon, marked "True Love, 1861." The ship True Love has not cruised for eight years, and the whale must have carried the iron for that period, if not longer.

—The Atlantic Works of East Boston have contracted with Messrs. Joseph Church & Co., of Fall River, to build for them a steam vessel for engaging in the porgy business.

—Four Gloucester fishing vessels have been lost this season in the Grand Bank fishery—three of them with all of their crews. A fifth is now given up as lost with her crew of thirteen men.

—Our esteemed correspondent, E. J. Hooper, Esq., of San Francisco, has written a very interesting article on some of the principal fishes of California, in one of the California journals. These contributions are of much value to science, so we hope to hear further from Mr. Hooper.

—Every river and stream in Florida abounds in fish of numerous varieties. Shad catching commences in December and lasts until May, when they go North. Numbers are sent to Savannah and the interior of Georgia and to Charleston. Shad were so plentiful last Winter in Jacksonville that they sold two for twenty-five cents. Our soulets begin to appear in July. In August and September they are in their prime, some of them weighing as much as four pounds. They are so plentiful that we have known six of them to sell for twenty-five cents, and in St. Augustine they are still cheaper. A great trade could be done in these fish; they are so fat that the oil alone would pay for extracting, or they could be salted and packed in barrels to be exported, as mackerel are treated. The roes dried in the sun are a great delicacy, and if known in the Northern markets would command a high price. Over 2,000 mules have been caught at one haul of a small seine. Our mullet here much resemble the West Indian calpepper, so highly prized there, and we think is the same fish. In the West Indies the fish as caught are cleaned and seasoned with black pepper, stuffed with bread crumbs, wrapped in a banana leaf and baked; it is then a delicious dish fit for the gods. The river is cruised by the shrimps men in months during the Summer. They are usually selected in quantities per quart, but only a limited quantity can be sold at that price. They are large and fine, and a profitable business could be carried on in potting and canning them during the season. Of sheepshead, bass, croakers, brim and perch, we have an inexhaustible supply. Young hickory shad and bony fish through the St. John's River in such quantities that a person can catch barrels with a common cast net.—Florida Agriculturist.

STRIPED BASS FISHING AT NIANCTIC.

NEW YORK, December 21, 1874.

EDITOR FOREST AND STREAM.—It was my good fortune last Nov. to spend a week at Niantic, fishing in the river of the same name for striped bass, one of the most beautiful and gamest fish taken on our coast, and the fishing at this point is the more attractive, as it is done from a bridge not twenty yards from the hotel on the flood tide, and from below the railroad bridge at the ebb, and trawling at night over about five hundred yards of as sparkling and clear water as can be found in Lake Champlain. The current is very rapid, and from the bridge the line sweeps the whole width of the river at this point of the channel. A small fish called mummy-clugs are used for bait, hooking them through the mouth, thus permitting them to use their gills, and in this way they live for hours. Some of the craft here use small eels for bait. The bass ran from two to seven pounds when I

was there, as the school fish were running up the river, but one gentle man trawling at night struck a bass which carried his rod under the boat, and not long before a fish weighing thirty-five pounds was taken by the landlady, and he recently wrote me that he had struck a bass which carried away his tackle, after trying to drown the fish for half an hour. The hotel is exceedingly comfortable, and the rooms and beds excellent, and the fishing ground within call of the dinner bell. Blood Point, one mile from Niantic, is a famous resort for fishing for large striped bass, and one was taken there while I was at Niantic, weighing over fifty pounds. Niantic is six miles this side of New London, and is reached from East Lyme, Conn., and is one mile from that place. A fish called hickory shad were in the Niantic River by thousands, but could not be persuaded to take the hook, although Mr. D. B. Reed, the proprietor of the hotel, tried them repeatedly with shad rigs; but I have since learned at Barnstable that they will bite a piece of red wood, and would also take any sport, as they are about two pounds in weight and very game, although not considered a good fish for the table. The comfort in fishing from this point (no spray nor wetting) must commend it to the angler, properly equipped with rod and reel.

—President Ferry of the Yale navy and Capt. Otis of Harvard, are said to be much in favor of the New London course for the next regatta, and the *Starlight* says that two-thirds of the colleges are of the same mind. The New London hotels would accommodate 1,600 guests, while the neighboring villages, easily accessible by steam and rail, would quarter the rest.—Springfield Republican.

NATIONAL AMATEUR ASSOCIATION.—A meeting of the Executive Committee of the National Association of Amateur Oarsmen will be held at the Astor House, New York, Saturday, Jan. 2, 1875, for the purpose of appointing a time and selecting a course for the next national regatta. Any communications received by me before that date will be duly presented to the Committee.

Very respectfully,
309 Chestnut St., Philadelphia
J. C. PINKERTON,
Secretary Ex. Com.

—Sadler, the English oarsman, has agreed to row Brown, on Bedford Basin, in June or July next.

—A despatch from Rockland to the Press says that during the late blow the yachts Beeswax and Medora went ashore at Dix Island. The Medora was sunk and the Beeswax was a total loss. The Medora was raised.

THE CLASSIFICATION OF YACHTS OF DIFFERENT RIGS.

THERE is a very strong feeling among yachting men against mixed races, that is to say, races in which yachts of different rigs compete together, yawls and schooners going either at the same time or time from cutters or a reduction of tonnage; and there can be no doubt that many reasons it would be better to have separate matches for the various rigs; although at the same time we would regret very much if mixed races were entirely abolished. It is quite true that in a schooner's day when there is a great deal of reaching, the two-sticker, even without claiming any allowance, is quite as much a match for the cutter as the latter is for the former when there is much turning to windward, and that therefore the result of a race between these two rigs depends chiefly on the direction of the wind and the shape of the course. The yawl is in some way the same position as regards meeting a cutter, the only difference being that she is better on a wind than a schooner, but not so good in reaching. In very strong breeze she is brought to her good as a cutter, on every point of sailing, and in fact, is her big nearly resembling a cutter, so do her sailing points. It has been frequently proposed to class cutters and yawls together and race schooners alone, and to this the owners of cutters object on the grounds that they cannot meet them with a reasonable chance of success at the present reduction of one-fourth of their tonnage. That this is true in a strong gale and a heavy sea is undoubtedly, but whether under ordinary circumstances it is so or not remains to be proved. A few yawls—these we believe—have succeeded in beating some of our fastest cutters, and one in particular, the Florida, appears to be too much for anything at present afloat, but this does not prove the rig to have an undue advantage with its present allowance, as it may be that the vessel herself is an extraordinarily good one, and might be even more formidable rigged as a cutter. Having yachts of different rigs together has been the means of improving a few two-stickers, and so much that we think it would be unwise in the interests of yachting to utterly abolish the practice. If schooners had not been forced to meet cutters, it might never have been thought necessary to build vessels so closewinded as Cetoia, Sea Belle, etc.; and if they did not occasionally race together we would have no means of knowing how much we have improved our speed on certain points of sailing. It is perhaps perfectly just and proper for the cutter men to say they have no chance against a schooner in a beam wind; but if so the owners of schooners might equally object to meeting cutters in a dead beat to windward, so that it appears as if the justice (or injustice if the word is preferred) was equally balanced, but yet the complaints are generally on the cutters' side. It is perhaps with some such view as this comparing of the various rigs that so many yacht clubs now give prizes in mixed races for each rig, and a better plan for doing so, and at the same time giving satisfaction to all could not be devised; but when two or three prizes are given of different values, the first vessel of any rig saving her time should take the largest prize, the next yachts of different rigs saving their times taking the other two, and not, as is sometimes the case,

allowing the rig of the first vessel in to determine the class to which the prize is to be given. There can be no doubt that in strong winds when cutters have to reduce sail, yavls of equal tonnage have a great advantage, and of course much more if as is generally the case they are racing in a class below their own tonnage. Thus a yawl of fifty-two tons, with her reduction of one-fourth can in most clubs enter and compete in the forty-ton class and actually claim time for a ton as well. In heavy weather this would give her a very great advantage, as her size and extra power would be of the greatest value. Whether she would be successful or not in average weather remains to be proved, but a yacht of this size is certainly a great asset to a club, as the purchase of the forty-ton class, we may be enlightened on the subject next season. Acknowledging the importance of this extra tonnage, the Royal Ulster Yacht Club have a rule which debars schooners and yawls from entering at their reduced tonnage, so that a yawl of the size above mentioned would have to race under rules of that club in the class over forty tons, getting her full allowance of time for her reduced tonnage. This rule appears to be founded on a sound basis, but whether correct in practice or not we are not prepared to say. The yawl rig has become so fashionable since the wonderful success of the Florida that it threatens to become in reality what it has so often been styled, viz., the "Rig of the Future," so that the laws respecting it should be carefully considered, and if necessary revised, in order that no injustice may be done to yachts built for a schooner purpose under the existing regulations. But although we think that mixed races are useful and interesting for the reasons stated, we quite agree with the general desire for distinct races for each particular rig, and as there is now quite a sufficient number of each to ensure plenty of entries, and abundance of money to be raced for, it would be a great improvement if all yacht clubs gave such prizes at their yearly regattas.—*Land and Water.*

RIGGING AND SPARS.

PREPARED FOR FOREST AND STREAM.

When a person thinks of getting a boat built one of the first things to decide is the rig. This is often a very puzzling question, as each style has some good qualities not possessed by the others.

For a small yacht—say not over twenty-four or five feet long—I anchored the Newports or cat rigs to be by far the most desirable, as there is but one sail to manage, and they can be managed by one person easily. For a larger boat, say from twenty-five to thirty feet, the schooner rig, as they work quickly and sail close to the wind. As a class they are quite fast. Their greatest fault is that they generally carry a heavy weather helm, which makes a rude rudder necessary. In most cases this defect can be more or less remedied by the proper arrangement of ballast.

For yachts over twenty-five feet in length, a sloop or schooner rig is no doubt the best. When a man wants a boat any longer than that, he expects to get a pretty fair sea boat, and cat rigs, generally speaking, do not come up to the requirements in this direction. True, there are exceptions. The "Crosby," which made the trip from Boston to Florida last Winter, was cat rigged, as was also the "Franconia," which made a similar voyage a year or two before. For a small boat, I prefer a sloop rig, as my other four boats between twenty-five and forty feet in length, either for speed or comfort. Many advocate that a schooner is a better sea boat, as it is easy to drop the foresail and run under jib and mainsail, or, if it comes very heavy, a reefed foresail alone can be hoisted. But when a sloop under close reefed mainsail and no jib cannot stand it, there is no question but a schooner is better. When it comes to racing, a sloop will sail her curves in two or three sails, while a schooner has it in four or five, which makes the former sail much faster on the wind.

There is one mistake, which is made by nearly every yacht builder, and that is, having the spars too heavy. It does well enough when there is hardly a breath of wind, but as soon as it blows any, the bad effect is seen. There is no need of heavy spars, but they must be strong enough to hold the sails tight ones will stand all the strain which should be brought to bear on them. When there is a stiff breeze it is folly to carry a press of sail. Long, heavy toppers are also a lumbering. It is a good plan to have the toppers so rigged that they can be slid down at short notice, as they are on the English cutters. It is the heavy mast which prevents a schooner from sailing so fast as a sloop. It is a very common mistake to think that a sloop will sail faster than a schooner. Within a year or two, however, this difficulty has been partially overcome by the introduction of hollow masts. The mast is split open and scooped out inside as if the two halves are then firmly bolted together. This does not take away much of the strength. The boats having them ride over the waves much more easily than those with solid masts, and sail and run in a rough weather, and make a better sea than will be the next season. As yet they have been used only in New York, but before long the larger yachts will probably adopt them. I believe they have been used in ships before now, so that it is not a new idea.

C. F. G.

WINTER YACHTING IN N. CAROLINA.

NEWBURN, N. C., December 29, 1874.

ENTER FOREST AND STREAM.

Estimated as we are, midway between the extreme cold weather of the Northern States and the oppressively hot ones of (even in Winter) Florida and the Gulf States, we never think of leaving our yachts, except for repairs. We enjoy the most delightful cruising of the whole year in the months of December, January and February, upon the New River and Pamlico Sound, and New Year's day is our clippers bear the best of the season. For the last three years, on New Year's day, the ladies of my household have sat with the windows open receiving callers in attire of the North without feeling fitting for Long Branch. Yet we have sufficient frost to drive the rattlesnakes and such varmints into their holes, and exterminators, for the time, at least, fleas, ticks, mosquitos, and render our waters a delightful resort for countless thousands of wild fowl, driven by the extreme cold of the higher latitudes to our congenial clime.

I have just returned from a six days' cruise in search of that rather erratic gentleman, Mr. N. H. Bishop. On the evening of the 21st inst. I received a telegram from Norfolk, stating that Mr. Bishop had left the city upon the 11th, bound for the mouth of the Roanoke river, and was to be met on the banks of the Roanoke, probably Portsmouth, and bring him up to Newburn; so when I received the above message, supposing he was anxiously awaiting me, at either Portsmouth or Roanoke Island, I made haste to get under way for whichever point the wind and weather would permit me first to reach.

At 10 o'clock then, on the night of the 11th, accompanied by some friends, we boarded the Julia, found side lights up, a warm fire in the stove, water breakers all filled, plenty of provisions, (as we then thought) guns and ammunition, &c., &c., with a very little velvet, something to make the kelp slippery, and by the way, Manix thought at the start we had better take a little jelly to help get started, and of course, when the boat was under way, we were to be met by a boat from the shore, through the blockade of the ice, to meet us at Newburn. Well, clear of the shoals, we turned in, leaving sailing master, Capt. Davis, at the wheel, and our crew of one man on deck. About 3:30 in the morning, leaving the jib run down, I arose, and found we were in the mouth of Broad Creek, just at the mouth of the New River, and forty miles from Newburn—a good harbor, and into which Capt. Davis had run, because of the threatening appearance of the weather. Five colored men were again under weigh, with a strong N. E. wind and rough sea, pushing the

New River light house, half an hour later, hailing and receiving a salute from the genial Dick Daniels, principal keeper of the same. Ordering the Captain to shape his course for Roanoke Island, we got our anchorage divided attention to breakfast of broiled steak, coffee, &c., but by the time the steward had made things tidy again, our "giant," S. gave signs that warned us that there is a limit to human endurance beyond which, in his particular case, at any rate, it would be unwise to pass. The wind momentarily increased, sweeping the whole length of the Sound, and kicking up a sea such as one meets with nowhere else—sea and chop, and chop and sea, every way. We landed on the shore, and ran for the mouth of Bay River, a large stream to the northward and eastward of Place Point Shoals, a good harbor at the mouth in a northeaster, but so very wide (nearly two miles) that with the wind S. E. or S. small craft like ours ran well up. Anchoring under the lee of the N. K. marshes, we determined to have duck for dinner: so taking my Remington double-barrel, I went out with Capt. Davis, we landed on the shore, and creeping quietly to the edge, saw three shufflers feeding within gun shot, two of which fell beneath the Captain's accurate aim. Calling the boat, and leaving Davis on the Point, I was rowed up a small creek, and secured two more as they flew past me, making four fine fat ducks, two of which we call "water witches," as the result of an hour's raid for dinner.

The wind lulled, at 1:30 P. M. got under weigh, but before sunset were becalmed on board, and with every appearance of a gale. All on board were anxious to make a harbor, and it seemed fated that we should not reach the island, as soon as we got steered way kept off toward Portsmouth, a little town five miles below Crookoke Inlet, on the south side of the sound. It soon became evident that we should not reach there before morning, so in view of the threatening appearance of the weather, ran for Southwest Straddle Light House, making the south-west point of "Roanoke Sound," and under which the shoal lying in the form of an inverted Y a good harbor can be made in all except southerly winds. Anchored at about midnight close to the light, the keeper of which, an old sea dog named "Rue," went on for breakfast a fine lot of oysters. We reproached by going in a body and making a tour of inspection through the whole establishment. The light of the night, one o'clock, and white, while the one on northwest point, two and one eighth miles distant, marking the northwest point of the Roanoke Sound, is a flash light. Capt. Rue keeps everything in splendid order—floors as clean as scrubbing can make them, and urasses as bright as polished gold.

At about ten o'clock we got under weigh for Portsmouth; but after taking on board a pilot to carry us over the shoals, we concluded to go instead to Crookoke, being informed by the pilots that Mr. Bishop had not arrived at Portsmouth. We afterward deeply regretted the resolution. From the time the pilots boarded us we sailed through thousands and thousands of wild fowl, a large portion of which were brant. Had we anchored and gone upon one of the many shoals or oyster reefs near us, I doubt not we might have shot large numbers of them. We looked at Crookoke, took time enough to make all secure before night; and after a good night's sleep, and a breakfast as one enjoys nowhere else as on such a trip, we paid a visit to the village of Crookoke. It consists of a few scattered houses—the homes mostly of pilots and wreckers—two or three stores, two wind mills, and last, but the most prominent of all, the light house, a black tower, painted white, eighty feet high, surmounted with a light, fixed, of the third order, I believe.

The channel, running along in front of the village where we anchored, is called "Teach's Hole," after the noted pirate Teach, who was killed on board his vessel. It is said, in a hand to hand fight with the captain of an English man-of-war in 1799 or '76, while at anchor there. The sailors say that Teach had died the night before, and in the morning called all his crew aft and told them to go ashore if they wished; that they all left the vessel except him, and that when she was boarded by the English, after a long fight between the captain and Teach, the captain, by a well directed blow, cut the head of Teach clean off, and that Teach then sprang overboard, cutlass in hand, and swam twice around his vessel before he sank. (Bring on another hero!) They say that before the fight began he emptied sixteen pistols into the air, and then went on board, and was playing with a light, fixed, of the third order, I believe.

If Teach's gang were scattered on the banks, one can more readily believe the fearful stories current many years ago of the dreadful cruelties of the wreckers towards the shipwrecked mariners cast upon this portion of our coast. Teach's Hole came near proving a resting place for the Julia, if not for her passengers and crew. We had made all secure for the night, and were about to go to bed, when a heavy gale was in the cabin, when the watch on deck said he heard a roaring noise, and thought it must be a steamboat, but could see no light. Concluding it must be the sound of the breakers, we went on with our game, when presently, with a roar like a thousand thunders, a hurricane burst upon us, careening the Julia over on her side. Before we could reach the deck we were under the water, and the vessel was in a moment overturned. Being ballasted with iron we went on to three three large pieces, weighing some eighty pounds each, and still she walked off with them, and as a last resort we got on deck and overboard a large iron bar, weighing some 225 pounds, before she brought up. All this time the wind was blowing a perfect hurricane, picking the water up and carrying it in torrents clear over the yard and mast, and the vessel was in a moment overturned. Being ballasted with iron we went on to three three large pieces, weighing some eighty pounds each, and still she walked off with them, and as a last resort we got on deck and overboard a large iron bar, weighing some 225 pounds, before she brought up. Answers To Correspondents.

We shall endeavor in this department to impart and hope to receive such information as may be of service to amateur and professional sportsmen. We will cheerfully answer all reasonable questions, but will not discuss the scope of this paper, designating localities for good hunting, fishing, and trapping, and giving advice and instructions as to outfit, outfit, outfit, distance, season, remedies, traps, etc., etc., governing rules, etc. All branches of the sportsman's craft will receive attention. Anonymous Communications not Noticed.

227—We will positively answer no more questions through our Correspondents' Column from anonymous writers.

P. M. D.—What size gun should I get for grouse and squirrel and small bird shooting, and how can I get the gun? What is the price of a good middle twist double barreled gun? Nos. 1. A 14 bore. 2. Any responsible dealer. 3. For fine twist, \$25.

J. B. D., Cleveland.—I understand that some gentleman in St. Louis has, or is about to patent, a new paper shell with a conical base, in my estimation a great improvement on the present shell. Do you know anything of it? Ans. Only what rumor brings us. If inventors would be just to themselves, they should inform us of any improvements they make in their inventions.

J. P. M., Jr., Lawrence.—I am anxious to buy a breech loader, and am in doubt as to what matter to try. I see by the last number of your paper that you recommend Scott, Duggan, or Richards. Some English gentlemen lately recommended me to try Lang or Reilly. What do you think of their guns, as compared with those of the makers you mention? Ans. Both Lang and Reilly make excellent weapons, but we have not heard of either, each individual has his own taste in the matter of purchasing a gun.

H. G. B., Milton, Vt.—I would like some information in regard to the frog trade: would be pleased to get the address of parties in that business? Ans. Write to Mr. Smiley, Waterville, N. Y., practical frog culturist, and to Seth Green, Rochester. There are parties at Kingston, Canada, and also in New Jersey who raise frogs for market. Eugene Blackford, Fulton Market, can give you full information.

T. W., Leesboro, Va.—Can the Coote hatching try he used out-of-side of a hatching house? Can it be used over any way to prevent intermingling with the eggs by any one? I can't find out from Dr. Slack's catalogue, or any of the works on fish culture. Ans. The Coote try is better adapted for the experimentalist who wishes to hatch a few in his house or office, than to the practical fish culturist. Dr. Slack did use them in his hatching house, but no other large operator does. For out-door use, a trough, with a cover, is better, better, wire cloth trays to lay the eggs on. Have the troughs firmly covered, and a cover to lock it shut. See article by Fred Mather, in FOREST AND STREAM, Vol. II, No. 9.

S. W., Donora, La Grange, Ind.—Can speckled trout be raised in brooks of this latitude? I have a farm with four good springs, also a small stream running through the farm. These springs are about forty feet above the brook. Can I raise speckled trout in these springs and raise trout there? Will they be about ten feet from the spring to the brook that runs through the farm? Ans. We cannot give you any satisfactory answer without being made acquainted with other important conditions of soil, temperature, &c., that you do not name; and these being known it would require a page of our space to give the requisite information. We have already printed dozens of papers on Trout Culture, conveying all necessary information. Better buy Livingston Stone's book, called "Domesticated Trout."

BARRETT, N. Y.—Where can I get yellow or green pike, pickerel, whitefish, and lake bass, averaging from two to the pounds apiece? 2. What can I find a fishery on Lake Ontario or Erie, as near New York as possible, to supply me daily from April till the middle of June with 100 or 150 good specimens? I have to be the shore when they are caught, because I have to give them to my friends for Christmas. Ans. You had better visit some of the fisheries on the lakes in preference to the American and Canada sides. Take branch N. Y. C. R. R. from Rochester to Charlotte, and cross on steamer Norseman; good fishery at Colbourne, or with Gordon Curtis, Willow Boat House, Black Rock, N. Y., Schutt Bros., Sandusky, Ohio. Large fisheries at principal towns from Cape Vincent up to Rochester and Lake Ontario. The firm referred to at Sandusky manufacture caviare, we believe. Better go to Onondaga and then up the lake and across.

B. F. B., Springfield.—What are the markings of the true Gordon setter? Some say black and white liberally dispersed, with tan cheeks and tan about the root of the tail, &c. Such is the marking of a colored squire by Laura, the setter, but the Gordon setter of the English dog show, and the dogs of that ilk sold us by the mercantile British and American companies, with very little white. *Quoniam?* Ans. There is a difference of opinion in regard to the color of the old breed of Gordon setter. We are led to believe from Stonehenge's remarks in regard to this dog, that black, tan and white, as well as black and tan, were the colors. The Gordon setter of today, as judged at such shows, should be a glossy black, with clear tan of a rich red. Some fanciers dispute as to whether a white rill is admissible.

C. F. T.—Will you be kind enough to give me a description of a Florida "water turkey," which I see frequently spoken of in FOREST AND STREAM? Ans. The Water Turkey, or Snake Bird (*Potus nankinensis*) is a resident of the fresh waters of Florida. It is about two feet in length, has a stretch of wings of from three to four feet, and a long, slender bill, made for diving and swimming, with a neck and head as true as a snake; a yellow eye, glossy black plumage on the back, and when in full feather with a cream colored breast and belly. It is very difficult to kill, owing to its habit of diving at the flash, and swimming a long distance under water, or with only the slender head exposed. It builds a nest of small sticks in low bushes and overhanging rocks, and lays four or five pale blue eggs in March and April. This bird is a true diver, and its habits, and purely a water bird, belonging to the order of *Alcedinidae*—swimmers, and family *Florida*—darters.

EN. S. New York.—I would like to put in the Spring some live quail; I have a very good place to keep them. Would you advise me to buy and winter them now, or wait till later? What do you think of the quail of the West? Ans. Friends of mine got twenty quail from New Jersey a few years ago, found many nests of eggs, and were very successful in raising them. It is generally the case? Don't you think that Western quail would be preferable for my purpose? Where can I get live quail, and at what price? Could I get, say 75 or 100 birds? I have several friends that wish to winter quail also, and any information you would give as to food and manner of keeping them would be greatly appreciated. I have your readers. A friend of mine advises me to cut out of the State of Virginia. He says it will prevent them from injuring themselves. Ans. By buying your quail now you will get better birds than in the Spring, and besides, the breeding season begins in February. Would prefer Western quail. For full particulars how to breed quail, &c., see illustrated article in FOREST AND STREAM, Vol. II, No. 187. For live quail, address E. M., care of P. C. Thomas, Thomasville, N. C.

—The dog show held in Birmingham, England, recently, was most decided success, the best strains of blood in England being represented.

—The steel works of Alfred Krupp, of Germany, are probably the largest industrial works in the world. The works cost over 900 acres of land, and contain 280 steam engines and 70 steam hammers. The number of men employed in 1872 was 11,000, having doubled in ten years. In that year there were in the shops 550 melting and cement ovens, 200,000 crucibles and 900 steel machines,

A discount of twenty percent. allowed for five copies and upwards.

Advertising Rates.

In regular advertising columns, nonpareil type, 12 lines to the inch, 25 cents per line. Advertisements on inside page, 15 cents per line. Reading notices, 50 cents per line. Advertisements in double column 25 per cent. extra. Where advertisements are inserted over 1 month, a discount of 10 per cent. will be made; over three months, 20 per cent; over six months, 30 per cent.

NEW YORK, THURSDAY, DECEMBER 31, 1874.

To Correspondents.

All communications whatever, whether relating to business or literary correspondence, must be addressed to THE FOREST AND STREAM PUBLISHING COMPANY. Personal or private letters of course excepted.

All communications intended for publication must be accompanied with real name, as a guarantee of good faith. Names will not be published if objection be made. No anonymous contributions will be regarded.

Articles relating to any topic within the scope of this paper are solicited. We cannot promise to return rejected manuscripts.

Secretaries of Clubs and Associations are urged to favor us with brief notes of their movements and transactions, as it is the aim of this paper to become a medium of useful and reliable information between gentleman sportsmen from one end of the country to the other, and they will find our columns a desirable medium for advertising announcements.

The Publishers of FOREST AND STREAM aim to merit and secure the patronage and countenance of that portion of the community whose refined intelligence enables them to properly appreciate and enjoy all that is beautiful in Nature. It will pander to no depraved tastes, nor pervert the legitimate sports of land and water to those base uses which always tend to make them unpopular with the virtuous and good. No advertisement or business notice of an immoral character will be received on any terms; and nothing will be admitted to any department of the paper that may not be read with propriety in the home circle.

We cannot be responsible for the dereliction of the mail service, if money remitted to us is lost.

Advertisements should be sent in by Saturday of each week, if possible.

CHARLES HALLOCK, Managing Editor.

WILLIAM C. HARRIS, Business Manager.

HAPPY NEW YEAR!

TO the readers of FOREST AND STREAM we extend our second New Year's greeting. Much useful and pleasant intercourse have we enjoyed during the twelve months past. Much we owe to many of our patrons, who have identified themselves with the interests of the journal they support by contributions, freely given, to the general fund of information gathered for the common good. It is a pleasure to conduct a paper where such kindly sympathy is so generally manifested, and where words of good cheer and friendly encouragement accompany nearly every missive received by mail. It will be our aim always to fill up the measure of our recompense to them, and as rapidly as our increased resources will justify the outlay, we shall add to our attractions in quantity, quality, variety, and embellishment. To the Smithsonian Institution, the State Fish Commissioners, the leading fish culturists, the officers of sportsmen's clubs, and army officers on the frontier, we are specially indebted for information not otherwise available. Were it not invidious to mention names, we would gladly designate individuals who have rendered us most serviceable aid. It is our ambition to produce a journal that shall dignify the efforts of its founders, and be worthy the support of the estimable class of society for which it caters. When it shall have attained that high standard of excellence to which we aspire, we shall be willing to accept the pecuniary reward that follows success, though we shall ever prefer a good name and fair record to the highest emoluments.

The recurrence of the New Year is not only a season for friendly greetings, but for good resolves: and each good resolve, whether carried out or not, brings the world one step nearer to the Millennium, and the Era of Perfect Man. If, therefore, our friends would hasten the coming of the beatific day, let them resolve at once to subscribe for FOREST AND STREAM, and recommend it to those who love the pure sports of the field and whatever tends to elevate man physically, mentally, and morally. As the welcome Holiday, with its joyous festivities, closes upon us, let us determine to make the coming year one of substantial progress in those respects, so that we may approach as near as possible to the ideal standard. And with this sentiment upon our lips, as the sun of 1874 goes down forever, we wish you all a HAPPY NEW YEAR.

LIEUTENANT WHEELER'S REPORT.

THE annual report of Lieutenant George M. Wheeler, Corps of Engineers, on the work accomplished by the expedition under his command in California, Nevada, Utah, Arizona, Colorado, New Mexico, Wyoming and Montana, has been published by the Government. It is a very important document, as it presents in a concise form the characteristics of the regions surveyed, and their flora and fauna. The collections made of the latter are very large and important. In 1873 the work of the party devoted to natural history may be deduced from the fact that they secured seven Indian crania, one hundred and sixty mammals, one thousand and two hundred bird skins, five hundred birds eggs, twenty-five birds nests, fifty birds crania, skeletons and sterna, one hundred and forty-five reptiles, five hundred and five fish, five hundred beetles, (Coleoptera); one hundred and fifty butterflies, (Lepidoptera); five hundred grasshoppers, (Orthoptera); thirteen lots of flies, (Diptera); thirteen lots of bugs, (Hemiptera); twelve lots of worms, leeches, larvæ, &c., seven lots of ants, (Formica); fifty-five lots of shells, land and fresh water, twenty-four lots of dragon flies, (Anisoptera); twenty-eight lots of bees and wasps, (Hymenoptera); twenty-six lots of spiders, scorpions, &c., (Arachnida); and fifteen thousand plants, embracing at least one thousand and five hundred species.

This collection contains many new as well as many rare species, seldom to be found in public museums. As in former years, the plan has been continued of distributing the specimens to eminent scientists. The fossils of the regions traversed were also scrupulously sought, so the consequence is that several new species of the fauna of the past were found, among the most interesting being four species of the *Toxodontia*. The report on the paleontological collection has been made by Prof. Cope, and to those fond of that class of information it will prove very interesting, as the characteristic distinctions and affinities of each animal are given in detail. One of the results of the examination of the field season of 1874, was the discovery of an extensive series of deposits of the Eocene Age, a fact which would prove that the portion of New Mexico now drained by the Chama River and its tributaries was an extensive lake of fresh water in the Tertiary period. This lake received the remains of the fauna of its shores, and preserved them in its deposit.

The upper formation is a moderate thickness of rather soft marine rocks, containing numerous shells, *Atrypa*, *Gastropoda*, and *Cephapoda*, including *Oysters*, *Bivalves*, and *Ammonites*, resembling *A. placenta* most, with sharks' teeth.

A considerable number of species of *Vertebrata* have been obtained, a large majority of which are *Mammalia*. While it is premature to attempt to determine fully the character of the fauna, enough has been ascertained to indicate marked differences from that of the Bridger group of Wyoming. It is peculiar in the entire absence of the genus *Palaopospon*, so characteristic of the former, and its replacement by *Bathodon*, which has never been recorded from the Bridger formation. The abundant species of *Myrarchus* of the Bridger are here represented by a single one of small size, which occurs but rarely, while its companion, *Myrarchus*, is very rare, or wanting. While *garrulans* are abundant in both, the *Amidæ* and *Siluridæ* have not yet rewarded the examinations. The characteristic genera of the New Mexican fauna are *Bathodon*, Cope; *Hippogynis*, Leidy; and *Phenacodus*, Cope, genera which it shares with the *Bathodon* bed of the Green River formation of the Bear River, Wyoming. There is in all respects so close a resemblance between these deposits as to lead to the belief in their horizontal identity, and with other reasons, to give to the Southern basin a higher antiquity than belongs to the celebrated Bridger series. The interesting fact that the teeth of six or seven species of sharks and one *Ostrea* have been deposited with the mammalian remains indicates that the marine Cretaceous rocks formed the coast-material of this lake, and the earlier period of its deposit is probable on various grounds, to be considered at a future time. The facts are all confirmatory of the view already expressed that the population of the Bridger epoch was derived by migration from a Southern region.

Perhaps the most important addition to paleontological science obtained during the course of the investigation is the discovery of four species of two new genera, *Cidamodon* and *Ectoganus* of *Toxodontia*, an order which has not been heretofore identified as having existed on the North American continent.

These important facts in science were not obtained without suffering much from hunger, heat and hardship; and the fact that the party prosecuted their mission with enthusiasm under all adverse circumstances, entitle them to the kind consideration of the scientific world.

TALLY ONE.—The following note from an advertiser is similar in its purport to others that we have printed from time to time, and to several that we have never published. It is valuable testimony to the usefulness of FOREST AND STREAM as an advertising medium among sportsmen:—

VALPARAISO, Ind., December 24, 1874.

EDITOR FOREST AND STREAM:—

Your valued order goes to-day. Since I began to advertise in your paper my trade has kept up at work night and day. I guess I will have to take out the advertisement, or let my gun rust; have no time for shooting, or anything else. But, on the second thought, let it run, because I would be a public benefactor, and an armer that when making a good shooting jacket than any other time. Yours truly,

W. H. HOLBROOK.

NEWFOUNDLAND.

ON the first page of our paper will be found this week a very interesting sketch of a trip across Newfoundland, in the year 1832. It is taken from notes forwarded to us by Mr. Alexander Murray of St. John's, Newfoundland, who has just returned from a scientific exploration of the interior of the island. In it the naturalist will find many important facts, as it shows the distribution of the indigenous flora and fauna, and the hunter and angler will find it a mine of information, as woodcraft, the best means of camping out, exploring dress and equipments, the best mode of securing a fire when no matches can be procured, and how to avoid water or detect its presence by the cry of sea birds, are given in detail.

This is the very class of knowledge sportsmen require, so we would advise them to peruse the article with care. The present sketch will be followed by others from week to week, until we have made that interesting country more familiar to our readers than it is to its own inhabitants. This region is little known here, owing to its distance and comparative isolation, but this we intend to reverse, as it has many attractions for sportsmen and all lovers of primitive nature.

THE BREECH LOADER.

WE resume this week sketches of the principles, peculiarities and characteristics of the breech shoot gun. The controversy as to the best material for barrels, and how best it should be worked, which commenced in the infancy of the art, has not yet abated. Opinions are as adverse now as they were then, and scarcely two of the trade can be found to agree.

Mr. Greener, Jr., in his work on breech loaders, insists upon the superiority of the laminated steel introduced by his father. He says:—

"It is an established fact that hard barrels can be made much lighter, that better shooting can be got of them, that they are more lasting, and that they retain superior shooting qualities longer than those made from soft metal."

He describes how this laminated steel is made, as follows:—

"Having collected a sufficiency of mill steel scraps, such as cuttings of saws, waste from steel pen making, old coach springs, and the immense variety of pieces arising from the various manufactures of tools, they are cut into pieces of equal dimensions, polished in a revolving drum by their friction against each other until quite bright, and then placed for fusion on the bed of an air furnace. The parts first fused are gathered on the end of a similarly fabricated rod in a welding state, and these gather together by their adhesion, and are removed as they become sufficiently heated, until the bloom is complete.

"The steel is then removed from the furnace and undergoes the effect of a three-ton forge hammer and tilt, until it forms a large square bar; it is then reheated and conveyed to the rolling-mill, where eventually it is reduced to the size of rod desired. A certain number are bundled together, welded, and then drawn again in the rolling-mill. Their color is repeated any number of times. All of which seems plain and convincing enough."

"But, on the other hand, J. D. Douglass, 59 St. James' street, London, the inventor of the celebrated Lockfast breech loader, in his excellent work, "Shooting Simplified," says:—No.

He says that steel is the most useful metal possible to be used, because it is the most treacherous metal used in gunnery. He quotes Sir William Armstrong's parliamentary evidence on his own cannon to support the assertion. He says that the term laminated steel is improper. "There is no steel in it. The repeated white heats to which it is brought remove all carbonization from the metal. No barrel of steel thin enough for a fowling-piece could be made, unless at such expense as would be absurd, and would be very unsafe."

"Mr. Douglass further says that hard barrels do not, but that the soft barrels do, shoot the best and wear the longest. He prefers barrels made of silver-steel, a metal which like the laminated steel, he says, has no steel at all in it, but only has the name for commercial purposes. He adds, that the "silver-steel" barrels are certainly the safest of all. They combine the softness once so much desired in flint guns, with a hard, cold-hammered surface, outside and inside, and possess an elasticity beyond all barrels whatever. For light guns they are, consequently, incomparably the best." And so Mr. Douglass uses the silver-steel, with occasionally Damascus, and also the barrels of Liège.

"Now, who shall decide between these Doctors of Arms disagree? What non-professional shall dare assert which of these great guns is wrong?"

"But when criticising barrels, there are certain *indicia* of workmanship which should always be observed. They should be well filed, highly polished, and entirely smooth on the outside. On the inside, they should be thoroughly smooth, to prevent rust, as the less liable they are to rust, the better they can be kept, and the longer they will last."

"To inspect the barrels, hold them up against a steady, not a glaring light, put your eyes at the rear, and turn them very slowly around. If they are unevenly filed, leaving hollows and swells on the surface, the broken rays of light will disclose the fact."

"Examine the interior of them in the same way to see that no asperities have been left by the boring-bit. If nothing of this kind appears, it may be concluded that the barrels are good; for the labor and expense necessary to bring them to this perfection would not be bestowed upon unworthy material."

"It has been said that, every gun in the world, like every man in the world, has its own idiosyncrasies of temper and of habit."

"This is to be taken, of course, in the sense in which it is said. No two barrels shoot exactly alike. Nor does the same gun at all times shoot exactly the same, under precisely similar conditions."

"Fallacious engineers say the same of their engines, and ladies, although not exactly in those words, say so of their sewing machines. Why this should be, unless it is caused by molecular changes, can not be conjectured."

"I quote the following passage from Mr. Greener's work, because it has special reference to American sportsmen:—

"The usual size for breech loaders is nominally No. 12 gauge; that means to take the No. 12 cartridge case. But the size or bore of the barrel is left partly to the discretion of the maker, who bores it according to his own fancy. Thirteen bore is the actual size generally adopted, but some makers prefer twelve and even eleven bore. All these sizes cannot be adopted for correct shooting, as the inside of a cartridge case is exactly eleven bore. There is only one particular size that is suitable; and this has to be found out by repeated trials at a target. All first class shooting gun barrels will be found marked thirteen bore. This mark is at the breech end, stamped at the proof house. In all cases when barrels are not bored up to the size before being proved, the proof-house people mark them the size under. For instance, supposing the barrels to be thirteen and a half gauge, they mark them No. 13; and again, if the No. 12 plug will not pass easily down the barrels the whole length, they still mark them No. 13. These marks are looked on by some as denoting the exact bore of the gun, but this can not always be depended on.

"All breech loading barrels are fine-bored after they have received the proof mark, in order to remove the indications caused by stamping them at the proof. If often happens that they are marked thirteen and gauge full twelve.

"Some Americans will insist upon having their guns marked twelve at the proof. This is a great mistake. It is impossible for us to make a really first-class shooting gun so marked. The same remarks apply to guns of ten bore. These should be marked eleven bore, which allows the barrels to be, when wished, just under ten bore. We would strongly recommend all purchasers of breech loaders to state the size of cartridge case they wish to use, and leave the question of the bore to the gunmaker."

ANOTHER SPORTSMEN'S CONVENTION.—We cheerfully comply with the request of the committee to publish the following call for a Convention to meet at St. Louis next 12th January, and will do everything in our power to further its objects. The call embodies the resolutions adopted at the organization of the National Sportsmen's Association at Niagara Falls last September, but as they are long, and we have already published them in this journal, we have omitted them in that part of the Circular indicated by asterisks.*

St. Louis, December 18, 1874.

To the Sportsmen of Missouri:

Realizing the great and growing necessity of a concerted effort on the part of amateur sportsmen throughout the State to secure to our game and fish that intelligent and reasonable protection against unseasonable and wholesale destruction which is requisite to prevent their total extermination, the "Missouri Sportsmen's Club and Game Law Association" of the city of St. Louis, at a regular meeting thereof held November 12, 1874, adopted the following resolutions:

"Resolved, That this Association issue a call for a mass convention of amateur sportsmen of the State, to be held at the Madison House, in Jefferson City, on Tuesday, January 12, 1875, at 7 o'clock, P. M., then and there to take steps towards organizing a State Association, under the jurisdiction of, and in harmony with, the National Sportsmen's Association of the United States.

"Resolved, That all amateur sportsmen throughout the State, independent of local organizations, be and they are hereby invited to attend and participate in the deliberations of the convention, and that all organized clubs be requested and urged to unite with this club in sending full delegations to the convention, and in taking such action as will insure a large representative attendance.

"Resolved, That J. C. Johnson, John W. Munson, Basil Duke, Charles H. Turner, Edward P. Lindsey, and W. H. Wadsworth, be and are hereby appointed delegates of this Association to said convention; also as an executive committee, with full authority to issue addresses, carry on correspondence, and to arrange all necessary details for the meeting of the proposed convention."

The game birds and animals are slowly disappearing from our State as they are from other Western States, and as they have already disappeared from many of the Eastern States. At the rate of decrease now, and without the intervention of strict laws rigidly enforced, our fields and forests will soon be barren of every species of game, and the pleasures of the sportsman destroyed.

By the proper organization of a State club, and of active local clubs in every part of the State, and by securing the passage and enforcement of such laws as are suggested by the resolutions of the National Association, we can not only maintain the present supply of game, but increase it in a ten-fold ratio within a reasonable period. The foregoing suggestions apply with equal pertinency to the fish in our streams and lakes.

As a majority of the gun and rod possess equal attractions, and the pleasure and profit of using either are being dissipated and destroyed by mercenary men. It devolves upon sportsmen to save to themselves their sport, and they can do it now only by a united and organized effort.

The convention will meet at the time and place specified in the resolutions, and we depend upon the true sportsmen of the State to make it a success in point of numbers and influence and the work it will accomplish. Let there be an individual representation from every county, and by all means a large representation from each organized club in the State.

All communications on the subject of the convention addressed to W. H. Wadsworth, 218 Walnut street, St. Louis, Mo., will meet with prompt attention. O. Shaler Smith, E. J. Gasman, Jno. W. Munson, Chas. H. Turner, Edward P. Lindsey, W. H. Wadsworth, Basil Duke, Committee.

OUR FLORIDA EXPEDITION.—A telegram from our correspondent "Al Fresco," dated at Punta Rasa, West coast of Florida, says:—"All well; start for the interior this morning." We have anticipated frequent notes of progress from him, but it is evidently intended to defer communicating with this journal until a complete narrative can be furnished in detail. Writing is not easy under the conditions in which an explorer generally finds himself.

Hunt of the Irish Team.

IMMEDIATELY after the conclusion of the International Rifle Match at Creedmoor last September, between the American and Irish teams, Major Arthur B. Leech, the Irish Captain, expressed a desire on behalf of several of the members and their ladies, to visit the remote West on a short hunting excursion. Whereupon the editor of the FOREST AND STREAM offered his services, which were accepted by Maj. Leech in a courteous note, and then immediately set about arranging an acceptable programme of the trip. He entrusted the management of the Western division to G. W. Dorman, Esq., of Hannibal, Missouri, while with much telegraphing and correspondence, he essayed to make pleasant the journey between New York and Hannibal. Railway companies responded with generous alacrity, and provided passes and special coaches; the Erie railway placing at their disposal its finest palace car, costing \$40,000, which was soon after burned at Clifton, Canada. Receptions were arranged at Buffalo and Toledo, and a committee of railway officials and prominent citizens was delegated from Hannibal to go up the Wabash and Great Western Road as far as Decatur, and escort the distinguished guests to their first objective point, Hannibal, where lodging cars, dogs, hunters, tents, provisions, and all necessary equipments for the hunt were to be in readiness, provided conjointly by private parties and the Missouri, Kansas and Texas R. R. Co. Thence the party were to proceed to Kansas and the Indian Territory, and the hunt would begin.

Doubtless the programme and journey would have been carried out through all its agreeable continuity, had not several of the Irishmen decided to postpone the start in order to compete for the Bennett Challenge Cup on October 2d. Meanwhile, Major Leech himself, the ladies, and those not participating in the rifle match, went on a visit to Niagara Falls, and thence proceeded to Buffalo by telegraphic order, where they awaited the arrival of the rear guard on Monday noon, October 4th. This delay of six days unavoidably threw the machinery of the pre-arrangement altogether out of gear, so that when the ranks of the excursionists were closed up and numbers told off, it was found that no provision whatever had been made for the party (now comprising ten gentlemen and three ladies), all of whom were left standing at fault in the inhospitable depot shed, while the trains that should have borne them westward sped away! This fiasco so discouraged the visitors that all but five of the gentlemen and the editor of this journal, returned to Niagara Falls by the first train! The description of the last part of the expedition at once dashed the ardor of the remainder. Maj. Leech, the distinguished chief, and the ladies, all of whom were adepts in the chase at home, being left out, the hunt of the "Irish Team," as such, then and there practically received its coup de grace. The *céleste* of the tour was lost in the decimation. The honorable fragment could not maintain the importance or command the consideration of the distinguished whole. Courtesy and interviewing public was proportionately abated. Reception states along the way were of course wiped off. Railway officials and delegated committees, who had held themselves in readiness to meet appointments, found their professional duties pressing upon them. Special cars were countermanded. And so the original programme lapsed. The issue was unfortunate, and the disappointment great in all quarters. However, those who remained were most cordially received by the "Forester Club," of Buffalo, and made happy their hospitable headquarters, until the departure of the midnight train for the West. The names of the undaunted were Rigby, Milner, Bagnall, Johnson and Kelly, and the number included four of the best shots in the "team." They spoke of their reception at Buffalo as one of the most pleasant of their American experiences. Arriving at Toledo with twenty minutes to spare, they found a crowd of several hundred citizens awaiting them in the depot, the head of which were His Honor, Mayor Jones, Rev. Father Hannin, Mr. Locke, ("Petroleum V. Nasby" of the Toledo *Blade*, Superintendent Malcolm, and other officers of the Toledo, Wabash and Great Western Railroad. All courtesies that were possible under the circumstances were extended to our party, and Mr. Hannin and others accompanied them forty miles to their destination, the head-quarters of the hunt, Hannibal, Mo., a distance of fifty miles from Toledo, east of Hannibal, Mr. Dorman (*alias*) met them with a special car; but, alas! the courtesy extended to a meagre half dozen guests, expended itself upon a beggarly account of empty cases. At Hannibal, a few citizens, faithful in patient waiting since the Tuesday previous, received them and escorted them to the Planter's Hotel. The following morning they were joined by Mr. Edward Hope, of La Grange, with a couple of sizeable pointers and setters, in charge of a most competent trainer and hunter. The dogs were assigned to such quarters and care on board the train as no Eastern road that we wot of ever provided. Hearts that have wept and bled over the neglect and indignities that valuable canines have suffered elsewhere within their experience, would have leaped for joy now. The party, increased to nine persons, resumed their journey. The quantity of baggage, gun cases, and ammunition hunter. The dogs were loaded. During three days of continuous travel the Irishmen had been going West, and they now began to think that this was "a great country!" They longed for the *ultima thule*, still two days' journey beyond. No wilderness yet appeared, and civilization, with its populous towns, its magnificent farms, and elegant residences, kept pace with their progress, and seemed as ripe here as in the older States in the East. At Sedalia, Mo., passenger Superintendent Brown joined the party, with his dog, and at Schell City the first hat was made, and two days were over quail and prairie chickens, with a wagon load of birds as the result. Accommodation and table were found here as the R. R. Co.'s refectory, surpassed by none at the East. Mountains, fockeries and aquaria embellished a shaded lawn, and vases were up with luxuriant flowers. One morning here, while the *Tea* was at breakfast, some inquisitive maddler carelessly handled a gun in the reception room adjoining, and the charge went off, making an ugly hole in the wall. Ten days afterwards, one of the county papers announced that the Lord Mayor of Dublin

had accidentally fired off a gun in the dining room, and had killed a servant girl! The honorable distinction that had been given the party such wide-spread renown still clung to this humble fragment of riflemen in their isolation on the prairies of the far West.

An additional day's journey brought them to Cheopa, on the Kansas line, two miles from the Indian Territory. Here, within a circuit of thirty miles, was to be the principal theatre of adventure. Wagons, saddle horses, guides, hunters, cooks, more dogs, tents and provisions were secured, and the party was increased to thirteen. Supt. Brown had returned to Sedalia. A fifteen mile drive over the open prairie brought them to their first camp on Cabin Creek, in the Indian Territory, an ample supply of birds for supper having been secured on the route. All traces of civilization were left behind as soon as the line was crossed. Most exhilarating was the ride into the "Nation" over the long undulating sweeps of prairie, broken only by occasional groves of oak and long stretches of timber that fringed the beds of creeks now dry. Brown for the most part and seared by the long continued drought, the dry grass swept the knees; but here and there at intervals, where fires had run over large areas some weeks before, the blades were of intense vivid green, looking like compacted sward at a distance, but under foot scant and scattered, affording no sustenance for the deer, and scarcely enough to regale grasshoppers, crickets and fires that incensed the birds. Every little animal life was seen. Occasionally a ground squirrel or cravish scrambled into its hole, and a solitary buzzard sailed lazily overhead. Smokes from numerous fires hung over the horizon, or belched upward in thick volume from behind some intervening knoll. In the swales, where the seeds of ranker grass afforded food for straggling flocks of prairie hens, the dogs would sometimes make a point, and the half dozen birds would drop to the sportsmen's guns, the unhurt residue flying a half mile or more out of sight and harm's way. Atmospheric effects were sometimes weird. While elevated objects stood out with remarkable distinctness, the refraction was such that the unaccustomed eye could hardly determine whether they were far off or near. They lost their distinctive outlines in a kind of mirage, so that a solitary bush that stood a knoll was mistaken for an Indian village, and distant trees looked like stacks of hay. Toward sundown, when these objects cast their lengthened shadows, illusions were intensified, and then the vivid green of distant grass patches glowed in the light with a coppery hue that dazzled the eye. Very different to the Irishmen were these prairie experiences from the renderings of their native moors.

The hunt of the "Team" in the West had excited among the sportsmen an interest greater than mere curiosity, for the desire was general to know whether they acquitted themselves creditably in the Field as at the Range; whether their practice would challenge favorable comparison with our own. In short, the hunt was regarded by many as a sort of field trial, which was to test their endurance of the rough vicissitudes of the bush and bivouac, and their ability to track a quarry as far as they could see him as easily as they could pick the centre of a target at 1,000 yards range.

The discipline imposed upon them was severe from the outset. The brawny borderers who took them in charge catered for them in their own rude fashion. No dainties filled their provender kit. The commissary was barren of canned fruits, condensed milk and preserved meats. A single string of onions and a jar of pickles were the only luxuries. Hard tack, salt pork, butter, tea and sugar filled up the measure of their supplies. The camp camped at night it was a toss for the four places in the single tent. The two wagons accommodated four lodgers more, and the remainder of the party had choice of the best spots around the fire. Fifteen miles they had to travel the first day over the scathed prairie before they found any water at all, and when they pulled up at a creek which ran half a mile from the camp, they found only a shallow puddle in the bottom, and which they would have scorned to scotch vigorously, stirring up the mud in a roily water and swam. Here they were compelled to spread their blankets. Fortunately, a two-gallon keg, brought from town, furnished sufficient good water for the tea kettle. For the chicken stew six quarts of doubtful fluid were carefully skimmed in tin cups from the surface of the puddle. The horses drank eagerly at the brink, and then the knees in the attempt. The second night the party farmed out, and water would have sold them at a high figure, for all were thirsty. The guides had tested two of the customary camping places, and at each found the creek beds dry and cracked, with small dead fish scattered about where the water had soaked in and left them. A third attempt discovered a considerable puddle, and camp was accordingly made the timber land by. There was no other water within several miles. Green ooze rankled at the sight of its surface. The thirsty horses blew a small circle into it with their nostrils, and were soon satisfied. For culinary purposes the liquid was not a success. Experimental tests were not assuring; and so, pot, frying pan and tea kettle were dispensed with. Each man cut a stick and toasted his meat over the hot logs. Milner of the Team had been so long in the woods that he shot a fine buck the next day, together with the birds that had dropped to the gamesters, made a most ample and delicious repast. It would have made the Lord Mayor of Dublin choke with envy to see his countrymen among that charmed circle of fourteen, squat on their haunches around the fire in the dry bed of the creek, each with his bit of a stick pointed toward the common centre of their own happiness, watching with gaze intent the cooking of the savory morsels as they sizzled. And he would have found friend Kelly, of Castle Bogut, credit for being no "greenhorn" had he seen him slyly whip off a generous cut of the tenderloin from the carcass beside him, and smile sardonically when others complained that their pieces were tough! With a small mouthful of whiskey to wash down their supper, the Irishmen were not intent the morning for water after a night of such thirst, and swung it up on a sapling, out of reach of the coyotes. The debris was fed to the dogs, and right royally they feasted then. Commend us these dogs for patient waiting! With what schooled self-denial they lie with their noses toward the tempting viands, restraining whine and nodger until their masters have had their fill!

Cheerily dashed the dancing firelight through the branches of oak and cottonwood, gleaming afar out on the treeless prairie, where hunters, outlaws and vigilantes constantly roved; but no one feared its betrayal. It would

have required the courage of a formidable party to storm that camp. Four good Indian fighters, born and bred on the Plains, fourteen guns good and true, with reserve of rifles and pistols, and ammunition unlimited, two steep banks of the creek for barricades—the advantage was all in favor of the entrenched. The most cautious approach would have been detected by the sentry on guard far beyond sure rifle range. No one molested them.

The bark of the prowling coyote was heard only in the distance. A solitary screech owl alone vouchsafed a recognition of their presence. And so all slept securely and serenely. The piercing stars looked down through the frosty night air with a cold white light, and those who were occasionally pulled their blankets closer under their chins. The wind turned the fire to the fire. Occasionally the night watch was broken by some one stirring up the waning embers and throwing on fresh fuel, a movement which the slumberers were barely made aware of by the increased comfortable warmth. Then the replenished fire would snap and crackle merrily and send up its shower of sparks and column of smoke; the audible snores in the tent and wagons increased; the horses momentarily resumed their munching at their corn and the deer, the dogs, the men, the moccasins, they tucked their noses under their paws after the momentary disturbance. A bivouac is always enjoyable and exhilarating, except when it rains, and it matters not if the limbs become cramped and stiff, a half hour's exercise at dawn will make them limber. A saddle, a pair of boots, or a bag of crackers, serve well the uses of a pillow, and a rubber overcoat covering the shoulders and loins, is a positive protection. Ague and rheumatism are not the afflictions of cold so much as of dampness. Damp clothing breeds disease. "Keep dry," is the imperative injunction.

The morning meal lays the substratum for the day's achievements. A good "square" meal fortifies against fatigue and prepares for an arduous march or protracted hunt, although an empty larder is no mean incentive to exertion. Precious little time was devoted to culinary exertion, when the men were so much occupied with their provisions were ample, the lack of water or other drinkables was severely felt. When the teams were hitched up, the company took up the line of march for Big Cabin Creek. No birds were to be shot at this day, for larger game was sought. Only half and buck shot were dealt out to the fusiliers, and the distant range of hills, where the deer were to be hunted, became a landmark of the day's ordinary interest. Much changing of the diversity of landscape, the long prairie, the low hills, the rolling hills, the horizon in every conceivable form of gracefully rounded outline, some of them rolling off like successive ocean billows, others more rugged that reached out into the level prairie and ended in bluffs, around whose bases the wagon trail ran. In the blue distance a line of timber might be faintly traced, while on the faces of the nearer knolls serpentine belts of green verdure marked the dry water courses that had been torrents in the rainy season, and are technically known as "draws." These are the natural drains of the surface-water from the plateaus above, holding moisture long after the surrounding plains are dry as tinder, and encouraging the growth of luxuriant grasses, flowers, and stunted timber. Consequently they are resorted to at all times by deer and other game, and especially in a period of continued drought like the present, when the water courses are so dry, the deer seek them at early morning, and at noontide take their comfortable siestas, sheltered from the burning sun by the grateful shade. Skirting these "draws," the hunter can often approach within easy gun range of the deer, and when he has "jumped" him, drop him by a well-directed shot. A single person, however, is by no means sure of his quarry, unless he be well mounted on a fleet steed; for a wounded deer will often make a desperate surrendering his prize to the worthless buzzards that are ever on the alert when game is afoot. Once, in a rocky gulch, we saw a hundred of these birds hovering and settling down in a black mass together, and when we approached the spot, discovered the half-eaten carcass of a splendid buck that evidently had not been killed twenty-four hours. Then we knew that other hunters than ourselves were in the field. Had we needed meat, the still unutilized haunches would have served us well, but ample larger of our own, we left them to go to the buzzards.

The correct method of jumping or bounding deer is for two horsemen to flank the ravine or draw, and following it to its head, take the quarry on either side when it rises. Two sportsmen with a hound, though not mounted, are almost equally sure of their game, if they be dead shots, so that the struck deer will drop before running far. At the present case, the deer were hunted with the help of two professionals on the *qui vive*—between the short stop, the bases, and the fielders, hound and human, it was a miracle if he got away. Yet miracles happened twice on the first day's hunt. Three deer were jumped, and the only one of them that dropped fell to Milner's gun. Its four-pronged antlers now adorn the museum of the Club at Dublin.

It would be doing the party injustice, however, to convey the impression that the whole of the hunt was a success. Three men were usually assigned to each, one stationing himself at the head, and the other two walking up the sides. Sometimes the party would become scattered over an area of a couple of miles, each member hunting pretty much on his own hook, picking up a prairie hen at odd times, and scanning the country closely for deer. On one occasion, while on the march, the two wagons were about a mile apart, following parallel ridges. "Fire!" rang out from the bottom, and three or four stragglers covering the intervening space. "The only horseman was far in the rear galloping leisurely along the edge of the draw, when some one looking that way, saw two deer suddenly leap from the rank, dry grass, with a blue puff of smoke following from the saddle; then the deer, apparently unhurt, scurried along the open prairie, heading toward the party, the horseman following closely on their heels. On the heels, keeping the course of the creek. The alarm was spread. Hunter No. 2 took a flying shot at them as they passed within fifty yards of him, the horseman now more than distanced and considerably blown. Pretty the graceful creatures ran together, the doe lapping her consort by half a length. The wagons now closed in to head them off. Hunters Nos. 2 and 3, stationed at the base of a prairie ridge, followed the animals closely, and as they came to the side of the ridge toward wagon No. 1. Discarding this new obstacle, the deer doubled gracefully back toward the draw, going at a 2.20 gait, and followed by a volley from the chariot and three others who had jumped in, and were now going at a breakneck pace down the hill! At the bottom three more stragglers fired ineffec-

tually, and it seemed as though the game was sure to get away, there being only three men in the remaining wagon to intercept them. Two of these jumped out and ran over a knoll which the deer were now skirting, and the wagon thus lightened, made good time over the course. The horses had good mettle, and were without the least frightened. The driver, an old border named Green, was desperate and mad. The deer all kept to the draw, being on one side of it, and the wagon on the other, not six rods distant. All did their level best, and the way that old six-seat Conestoga clattered over the gullies and gopher holes was a caution. Blankets and overcoats rattled out, cushions were spilled over the sides, and demijohns and pickle jars danced on the bottom. Down on his knees and bounding in a fashion that defied all certainty of aim, with the reins flying to solely over the backs of the horses, Green gradually drew on the game and making a spurt, let them have it with both barrels at close range. The blue smoke streamed off in a double pennant, as pursuers and pursued both vanished around the knoll!

After a short interval the stragglers came up, and mounting the ridge, saw in the far distance two dingy little objects that looked like mice, just disappearing from sight in a fringe of timber. The best shooting the team had was in Kansas, some twelve miles Northeast of Cleotaph. Here were good many straggling farms, with frequent corn fields not wholly stripped by the grasshoppers. Quails, rabbits and prairie hens were so numerous that a single day's hunt yielded two wagon loads to ten guns. The advance of the hunters on this occasion was like the march of an invading army. Deploying into line, ten abreast, with the dogs ahead as skirmishers, and the wagons at either side as flankers, a dozen birds were knocked over of each pack. Sometimes a solitary bird would get up unexpectedly, and sometimes two and three, but the season being somewhat advanced, the chickens flew chiefly in flocks, occasionally a hundred together. When they rose, they generally flew long distances, frequently a half mile or more. Of the Irishmen, Messrs. Bagnall and Johnson did the shooting, and acquired themselves with credit, seldom failing to knock over the birds, when they had become accustomed to their flight. Bagnall and Johnson did not shine in the crowd, and Kelly, who was unwell, couldn't muster enthusiasm enough to carry a gun much of the time. Four of them used 10-bore guns, and one a 12-bore.

Altogether, as we have said, the season was most unpropitious for reasons of the drought and grasshoppers. It was like taking to see the corn stalks standing stark and stripped in the field, the grass everywhere burned to a crisp, and the farmers carting water for miles for household purposes. But more sorrowful than all was the emigration eastward. All day long wagons kept coming into town bringing families who had abandoned their desolate farms on the far off prairies, literally eaten out of house and home, and despairing of sustenance of any kind. Pitiful most of their condition, if these could thus deliberately abandon the improvements and accumulations of years!

Whatever the "Team" saw and what they did, more than has been told in this brief narrative, must be left to the chief chronicler of their Western trip, if such there be. Their prairie experiences were novel and for the most part entertaining, and will never be regretted. Their cheerful pleasant recollections of their journey at St. Louis, Hannibal, Le Grange, Quincy, and Chicago, and will not forget the courtesies extended by Mr. Munson, the Superintendent of the Chicago, Burlington and Quincy Railroad. Messrs. Bagnall and Milner subsequently extended their trip to Colorado, and when, at last, embarked for Erin, they carried with them the good wishes of many friends, and unceasing regrets at leaving our hospitable land. The Hunt of the Irishmen will long be remembered, and talked about in those sections which they visited; and many a person in the back country has gathered from the winds some vague rumor connected with their visit which possibly may not be satisfactorily explained. For instance there is Missess McRoarty, who read the caption of a paragraph in a local paper thus:—"The Irish team in the West." "Beggara!" said she, "they're everywhere. The whole country's full of them! I'll bet for the boys, what'd I bet of the railroads, the crops, and the canals? The more power! If them grasshoppers comes this way again, the West will not hold the half of them."

FINE PICTURE.—Mr. R. M. Shurtleff, one of our most truthful delineators of scenery, has finished a painting of Au Sable Lake in the Adirondacks. This charming sheet of water, embosomed in rugged mountains, and surrounded by towering crags richly clad in verdure and foliaceous shrubbery, is one of the most picturesque basins in the Northern woods and is the resort of large numbers of Summer tourists and the lovers of the chase. The transferring of this beautiful tary to the canvass is therefore one which will interest all who are acquainted with its tranquil beauties, and the stern character of its surroundings. Mr. Shurtleff has treated his subject with the greatest care, and has followed nature almost literally. He has made no attempt at presenting masses of striking colors, but has kept entirely to the quiet, cool and sedate hues so appropriate to the subject. His portraiture of the scene is almost photographic in thoroughness, and with this is combined a softness of touch and a breadth of composition which display his power to the highest advantage, and prove him to be an artist of a very high order of excellence.

—One of the handsomest papers ever issued in this country was the Christmas number of the *Daily Graphic*. The illustrations were indeed splendid specimens of the pictorial art, and the illuminated cover and typographical accessories gave it an air of elegance most pleasing to the eye.

—The General Office of the Erie Railroad Company has been moved to the old location, foot of Duane street. The new quarters are elegantly fitted up, and afford the most ample and convenient facilities for the transaction of the business of that great corporation.

—A California man has raised sixty tons of enabages on three acres of land, and got \$4,000 in gold for the crop.

Shot Gun and Rifle.

GAME IN SEASON FOR JANUARY.

Hares, brown and gray.

Wild duck, geese, brant, &c.

FOR FLORIDA.

Deer, Wild Turkey, Woodcock, Quail, Snipe, Ducks and Wild Fowl.

Under the head of "Game, and Fish in Sea," you can only specify in general terms the several varieties, because the laws of States vary so much that were we to attempt to particularize we could do no less than publish those entire sections that relate to the kinds of game in season. This would require a great amount of our space. In designating game we are guided by the laws of nature, upon which all legislation is founded, and our readers would be led to provide themselves with the laws of their respective States for constant reference. Otherwise, our attempts to assist them will only create confusion.

DEC. 31ST.—FURS AND SKINS.—THE QUOTATIONS ARE:				
According to size, color and quality.	Northern and Eastern.	Western.	Southern.	
Beaver, per lb.	\$1.50 to \$2.00	\$1.00 to \$1.50	\$0.50 to \$0.75	
Beaver, dark, per pelt	3.00 to 4.00	2.50 to 3.00	1.00 to 1.50	
Beaver, pale.	2.00 to 3.00	1.00 to 2.00	1.00 to 1.50	
Beaver, black.	10.00 to 20.00	8.00 to 12.00	2.00 to 3.00	
Beaver, brown.	2.00 to 3.00	1.00 to 2.00	1.00 to 2.00	
Badger.	75 to 100	37 to 50	23 to 30	
Cat, wild.	35 to 50	25 to 50	10 to 15	
Cat, house.	10 to 15	5 to 10	2 to 3	
Fisher.	10.00 to 15.00	8.00 to 10.00	4.00 to 6.00	
Fox, silver.	25.00 to 150.00	15.00 to 20.00	1.00 to 2.00	
Fox, red.	2.00 to 3.00	1.00 to 2.00	1.00 to 2.00	
Fox, red.	1.50 to 2.00	1.25 to 1.50	1.00 to 1.25	
Fox, white.	2.00 to 4.00	1.00 to 2.00	1.00 to 2.00	
Fox, black.	2.00 to 3.00	1.00 to 2.00	1.00 to 2.00	
Fox, gray.	75 to 100	75 to 100	50 to 75	
Fox, prairie.	50 to 75	50 to 75	50 to 75	
Lyons.	2.00 to 3.00	2.00 to 3.00	2.00 to 3.00	
Marten, dark.	5.00 to 10.00	3.00 to 5.00	1.00 to 2.00	
Marten, pale.	2.00 to 3.00	1.00 to 2.00	1.00 to 2.00	
Mink.	1.00 to 2.00	1.00 to 2.00	1.00 to 2.00	
Mink, pale.	1.00 to 1.50	1.00 to 1.50	1.00 to 1.50	
Otter.	5.00 to 10.00	1.00 to 3.00	4.00 to 5.00	
Otter, black.	5.00 to 10.00	1.00 to 3.00	4.00 to 5.00	
Neckratt, Fall.	20 to 22	18 to 20	15 to 10	
Neckratt, Winter.	25 to 27	22 to 25	20 to 21	
Neckratt, Spring.	25 to 27	22 to 25	20 to 21	
Neckratt, Kitt.	5 to 8	5 to 8	4 to 4	
Opuskrat, cased.	20 to 25	20 to 25	15 to 20	
Reconratt.	20 to 25	20 to 25	15 to 20	
Seal, fur.	5.00 to 15.00	1.00 to 2.00	1.00 to 2.00	
Seal, skin.	3.00 to 5.00	1.00 to 2.00	1.00 to 2.00	
Skunk, black.	1.00 to 1.25	1.00 to 1.25	1.00 to 1.25	
Skunk, short striped.	50 to 75	60 to 75	50 to 75	
Skunk, long striped.	40 to 50	40 to 50	40 to 50	

GAME IN MARKET.—Venison from Minnesota is now becoming quite abundant, and the price is down to 20 cents per pound by the saddle, and autelope from Nebraska brings the same price. Wild turkeys from Illinois, Ohio, and Michigan, bring from 20 to 25 cents per pound, according to quality. Ruffed grouse have now become so common that they retail at from 60 to 87 cents per brace; prairie chickens bring only the same price, while quail bring from \$2 to \$2.50 per dozen. Wild geese are not very plentiful, and retail at \$2.50 per brace. Mallard ducks are \$1.25 per brace; blackheads 87 cents; redheads \$1.25; canvass backs \$2.50 to \$3; sandpiper from Virginia are quite plentiful at \$1 per dozen. English hares are worth \$3 per brace; Canada hares 75 cents, and Connecticut rabbits 60 cents.

—Close season for nearly all kinds of inland game after January 1st. Water fowl are in season until after their Spring migration. In Florida the shooting season for deer, woodcock, quail, turkeys, snipe, &c., continues until March.

NEW YORK, *Good Ground, L. I., Dec. 28th.*—We are spending our time in duck hunting, rabbit shooting and fox hunting. A party commenced a fox hunt on the 23d December, killing one fox per day during the week past, on Christmas Day killing two. We have a range of hills about one mile east of this village, barren sand hills excepting some large swamps. The hunters started reynard on the east end of the hills. The range of hills is about seven miles in length. One can stand upon most any of the highest peaks and see the race between the hounds and reynard, it is a chase of the coming to the extreme west end of the hills, we have the great Peconic Bay on one side, a large pond on the other, between bay and pond a narrow sandy beach of eight rods in width. This is the place where reynard gets slaughtered. The foxes are plenty, and the hunt is to continue until after New Year's Day. A fox can be started in less time than it takes to write this after arriving on the ground.

M. V. B. S.

MARYLAND.—December 23rd.—Sportsmen have had good sport in shooting ducks from the railroad bridge crossing the Gunpowder River, Maryland. Recently three gentlemen from Baltimore are said to have killed there in two hours forty-one canvass backs and seven red heads.

INDIANA.—*Valparaiso, Dec. 24th.*—Quail shooting good; pheasants plenty, but in hard cover to shoot in; prospects good for plenty of birds next season.

MINNESOTA.—*Shakopee, December 16th.*—Yesterday, the 15th, the time was spent in killing deer in this State, and pretty much all other game is shut out now for another year, sportsmen will have to lay by their fowling pieces and rifles, unless they indulge in target practice now and then. That deer will continue to be slayed right along in certain localities until the approach of February, as in days past, there can be no question. Yet, as the Fall and Winter weather has been unusually favorable, on account of a scarcity of snow and but few damp days during the past six weeks, there will be a greatly diminished number killed compared to the past few years. As the penalty for violating the law is severe, it is just possible that some of our great hunters will be a little careful about how they pop over the bounding doe from hillside and ravine, even if meat is scarce. These "antlered specimen" hunters will doubtless be anxious to submit to such a trial, and supply of horns of that kind this year. There are other horns, however, that trouble some of our would-be hunters extraordinarily, if the signs are correct, as this specimen item from the Wright county *Engle* affirms:—

"Ice Tignor, or the Wild Hunter of the Big Woods, returned home last week with his skin full of burnt powder and poor whiskey. One eye was nearly blown out, and he looked as though he had been struck by lightning, chewed up by rattlesnakes, and had an attack of the Jim-Jim."

ENTER FOREST AND STREAM—

You intimated, incidentally, in a private letter to me that our company seemed to be a kind of "Sportsmen's Corporation, inasmuch as all the officers were ardently devoted to field, dog and gun." I have never given much thought, though your suggestion compels me to admit that our members are doing just that. I have been a member of the club since 1892, while we have attained a special course of training designed to hunting parties, and all of our officers seem to take a great interest in sporting matters, especially shooting. But I cannot say (and I am sorry for it) that they are all practical sportsmen. Mr. W. R. Woodward, our former General Superintendent, was perhaps an enthusiastic a sportsman as there ever was on any railroad. He always took especial pleasure in transporting hunting parties over the road, and invariably accompanied them. He was a sportsman, and could admit to a little of the "gameid shot," had fine dogs, and would out wear four ordinary men. He is now in Texas, and I hear enjoying himself among the game of that country. Mr. R. S. Stevens, our General Manager, does not shoot, yet he generally accompanies distinguished hunting parties over the road, and takes a hand in it now and then. Phil Sheridan has been out two or three times, and got away with numerous deer. The club has a fine transportation, has been with us but a short time, and has not had much opportunity to show his hand with the shot gun, but he took good care of General Singleton's party, and I judge appreciates the good old sport. Our Division Superintendents, Mr. J. J. Frey, L. S. Hamilton, S. C. Eddy, and C. M. Sheaf, all enjoy the sports of the field, and you will find them out with dog and gun whenever their time will permit. Mr. C. F. McElvany, Division Master Mechanic at Sedalia, is also a sportsman, and is deeply interested in all sporting matters pertaining to the dog and gun. Mr. C. F. McElvany, Division Master Mechanic at Sedalia, owns one of the best broken dogs in the State, and will talk for hours on the

good old subject. He is a crack shot, as is also his son Al, who is one of our locomotive engineers. Mr. Wm. Garlock, master mechanic at Denison, Texas, tumbles over wild turkeys and chickens with great pleasure, and is one of our sport-men. Mr. M. P. Cogswell, contracting agent at Emporia, Kan., and a reader of FOREST AND STREAM, is a fine shot, and a winner of some matches, owns a fine breech loader and good dog, and kills every inch of the Neosho Valley, and can take you in quail and duck grounds at any time. And so can Pete Harris, our track master on the Neosho Division. Mr. L. Stafford, and Geo. Yost, track masters, also are both good shots and own breech loaders. Conductors P. D. Watson and J. H. Doyle will find in the field with their dogs and guns, whenever they can get a day off. Some of our station agents are also sportsmen, and own fine dogs and guns. Mr. Dorwin, our General Passenger Agent, does not shoot much, but he takes particular pains to look after the interests of sportsmen going over our road. In fact a sportsman is welcome among us all. He is one of us as soon as known. Whenever I can get a few days off I generally make for the Neosho Valley, where quail, rabbits, chickens and ducks are very plentiful. During snipe season there are millions of them. The station agents are all on the spot, and I always have a splendid time.

So far as the transportation of sportsmen is concerned, we try to please always, and when I can do anything personally towards their comfort it is a pleasure. As for the transportation of hunting dogs, our baggage men all seem to exert themselves to do their best. Some of our dogs are sent continually, and accompany baggage men over the road as a sort of recreation. We have a rule, and to it we all adhere, that no trips from point to point alone. Therefore, there seems to be a sort of mutual feeling between hunting dogs and all of our employees generally. If you should have any inquiries from any parties or persons desiring to come out our way, I will be glad to correspond with them, and give them such information I can in the way of advice. Their dogs will be taken good care of, I am free to say, and for once will try and make their trip pleasant, officially and personally. I have had some splendid trips down in the beautiful Indian Territory among the wild turkeys, (where I have seen them in great droves) and deer and prairie chickens. It is a beautiful country, and full of game of many varieties, splendidly watered by rivers both large and small, well timbered, and a mild climate. Small shooting and snipe, and deer, and wild turkeys, are often made a bag of from twenty to thirty quail a day, not including half dozen chickens and ducks. I can say that the sportsmen will find friends and a welcome in any town on this line among the fraternity.

JAS. D. BROWN, G. T. A.

LOADING GUNS.

EDITOR FOREST AND STREAM:—

In your issue of November 12th your correspondent "Side Lever" in a very sensible article on "Loading Guns," occupies, as I believe, an untenable position, in assuming that the gun chambered with the square shoulder is unworthy of notice. My own experiments, though not very extensive, have led me to exactly the opposite conclusion, and as the matter possesses some interest possibly for sportsmen, as well as gunmakers, I will trouble you with a few thoughts on the subject, hoping to hear from some of our friends—unless, Mr. Editor, you may dread the possibility of a prolix and interminable discussion.

"Side Lever" says he is a complete convert to a certain system of boring practiced in England, naming one firm in particular whose guns all will admit rank deservedly high. I should be pleased to know what that system is, and will venture the assertion that if he will carefully examine any dozen or more of guns, from the finest quality down, by any of the English makers he will know the reason for his conversion. The guns being imported in quantities, he will find long chambers and short, deep shoulders and shallow, and finally, some amongst even the finest with the despised, contracted taper, with no shoulder whatever. On any of these classes, possibly now and then a gun may shoot well, and I refer to it only as showing that even the best English makers have, as yet, no really well established system, par excellence. This is in some degree disheartening.

Again, "Side Lever" says: "If the shell is put in a bore made the same size as the inside of the shell, from the muzzle to within three or four half inches of the breech face, &c." Now, if I correctly understood that proposition, I can only say that I have never met with a gun bored in that manner, and have no desire to, believing it would be perfectly useless as a breech loader. It is not possible to have a bore of the same size as the inside of the shell, for the square shoulder plan, and yet, if I am not mistaken, this is a fair deduction from "Side Lever's" statement. There is a certain conservative sentiment, I am perfectly aware, in the minds of many good sportsmen, arising in most cases from cherished memories of some favorite muzzle loaders, in favor of a perfect continuous cylinder from breech to muzzle. This, in breech loaders, is not possible. A perfect 12 calibre breech loader, for instance, should gauge at least immediately from the termination of its chamber to its muzzle, 12, and a 10 calibre, 11. The inside of a 12 metal shell gauges 11, and a 10 metal shell, 9. Now, if these are fitted even as "Side Lever" desires, with the utmost care and accuracy, there must still be a rapid taper or contraction from the shoulder to main barrel, or we should have the gun which "Side Lever" supposes, gauging at its muzzle to coincide with the inside of its shells, viz: 9, in what is usually called a 10 gauge, and 11 in 12. Such a gun could not be made to shoot with any reasonable degree of strength. It is evident, then, that there must be rapid taper from chamber to barrel. Then why shoulder at all? I have for the past year shot a gun bored to the taper principle, for a metal shell which fits its size, just tight enough to move into it, and such a gun, when fired, tapers as to be perfectly gas tight. I can also use the paper shell (the one doing so in upland shooting) by turning it down well, finding that the rapid explosive force of the charge forces the paper when thus turned down to fill more tightly the gradual taper than when not turned at all, so that even with these shells I have not experienced any trouble from gas escape. I have not shot more than a few more shots in the best quality, by the most noted English makers, and in latter days several capital breech loaders; but the gun I refer to is by far the best I have ever shot, and I am satisfied that a proper taper is better than the best shoulder. I feel the more confident in my opinion, from the fact that the deductions from my limited experiments are more than confirmed by those of the well known gunsmiths of our city, Mr. Wm. A. Schaefer, the maker of the gun alluded to above, who states he has been both extensive in number and exhaustive in character, and have lead him to abandon entirely the square shoulder in favor of the taper or contractive plan. He has lately altered quite a number of the finest guns for several of our best sportsmen, and with a marked improvement in every instance. I do not know the exact shape of the taper, but have the impression that it differs from the English material, more taper than the one above alluded to, being easily kept clean, which cannot be predicated of any square shoulder. Other ideas suggest themselves, but I have already occupied too much of your space and patience, and will conclude by hoping that "Side Lever" may be induced some time to give a gun chambered on the Schaefer plan a fair trial, in which case I am convinced he will abandon the square shoulder in favor of the taper.

RUBANS D'ACIER.

NEW YORK, December 24, 1874.

EDITOR FOREST AND STREAM:—

I notice in your issue of this week that one of your correspondents undertakes to answer the questions of "N. B." about his Rubans Dacier gun. Either your correspondent writes ironically, or has misunderstood "N. B.'s" questions. To my idea the whole difficulty arises from the wrong spelling of the words. Rubans Dacier, which are French, and being correctly spelled, Rubans Dacier, signify in English, laminated steel. This being established, it is easy to know the meaning of the "way of loading a gun of the dimensions given, and the kind of game he should shoot with it. Yours truly,

M. L. L.

WANTON SLAUGHTER.

NEW YORK, December 21, 1874.

EDITOR FOREST AND STREAM:—

I was pleased to see in your issue of the 17th inst., the remarks of disapprobation you made about the killing of the great Northern Diver, described by Mr. Boardman. He stated that the Indian, in about an hour, killed thirty birds. Permit me to ask for valid reason or purpose did the Indian kill them? Was it for food? I fancy not. He must indeed have been driven to the verge of starvation to kill them for sustenance. Wilson says "they are never eaten," and I will vouch for the fact that the flesh is very unpalatable, tough and rank. Was it for profit? I hardly think so, although in some arctic countries the inhabitants use the skins for clothing. Was it for the sake of science? Emphatically no; for if that had been the object in view he would never have slaughtered such numbers. But I think I can conjecture the reason. It was for wanton sport, and the honor of having killed so many birds, generally difficult of capture. It is a sad fact that people calling themselves sportsmen, measure their abilities according to quantity and not quality. Probably that man thought he was doing a great deal of sport, and I should admire him if that was all an air hole in the ice, when at any other season of the year he would have been unable to obtain one without strategy. I consider it very cruel, as well as cowardly, to attack poor birds while in such a helpless state, they being entirely deprived of their natural means of defense—i.e., escape. Now, if that Indian was able at any season besides winter to shoot a single lion in the vast wilds of Siberia, I should admire him for his skill; but I cannot do otherwise than deprecate the mode he adopted to kill so many harmless creatures. I say harmless, for I know of no case where they have been injurious to man.

Again, the loon's cry is one of the wildest, but not unpleasant sounds heard in the woods, to my thinking. Last Summer I spent some time in the Adirondacks, and I delight to recall the cry, for at times it filled me with poetic and romantic feelings, as the south-easterly and re-echoed through the valleys of the Horneush Pond region.

The great Northern Diver is one of the handsomest birds we have; but if it is attacked and killed in such numbers, when unable to escape, it will soon become a *rara avis*. It is no characteristic of a lover of nature to take life wantonly, for he knows, for he knows so more than is necessary to accomplish the increase of knowledge, which is the end of science.

I hope, Mr. Editor, you will always, through your columns, show that the pleasure and merit in sporting lie in the intelligence displayed in strategy and the skill used in capture. And on the other hand, cry down all wanton cruelty attending sport, for then it rather debases than elevates the true sportsman.

C. H. BAILEY.

MASSACHUSETTS, IOWA, December 24th, 1874.

EDITOR FOREST AND STREAM:—

I send you the score of a shoot which was had in this city on the 23d. Four hundred birds were provided for the occasion. William Barnes brought down eight out of ten birds, and won the \$25 prize. Below is the score:

Twenty-eight yards.			
Killed.	Total.	Killed.	Total.
H. D. Hall.....5	10	A. Westcott.....5	10
H. P. Williams.....5	10	H. A. Hanson.....7	10
H. Reed.....5	10	E. A. Abbott.....4	10
J. K. O'Neal.....5	10	H. A. Hanson.....4	10
Twenty-three yards.			
A. V. Potter.....6	10	P. Woodruff.....4	10
A. O. Neal.....4	10		
Twenty-one yards.			
John O. Neal.....3	10	E. Shortz.....2	10
J. R. Bowler.....2	10	J. A. Pringle.....2	10
J. E. Chase.....3	10	J. E. Welsh.....2	10
In shooting off ties:—First prize, William Barnes; second, Hank Anson; third, divided between P. R. Barnhart and F. H. Griswold; fourth, J. K. O'Neal; fifth, between P. Woodruff and J. Blackburn; sixth, between A. Anson and J. Forney. Referee, J. D. Welsh. Score, a representative of FOREST AND STREAM. There was about a foot of snow on the ground, which fact accounts for the poor scores, the white birds being very hard to see. The shooting was from a ground trap, at the distances named above. Yours,			

J. E. HENNING.

—The "Mississippi Club," of Rockford, Illinois, has elected the following officers and directors:—President, W. D. McAfee; Vice President, A. C. Spafford; Secretary and Treasurer, H. P. Holland. Directors: J. R. Perkins, W. D. McAfee, Geo. Lincoln, E. N. Hill, H. P. Holland, A. C. Spafford, and D. W. Miller. The Club now numbers about 200 members, and they are all pledged to each other to aid in prosecuting and punishing all persons who unlawfully seize for fish in Rock River or its tributaries, or hunt for game at other than the times prescribed by law.

Rational Pastimes.

—Skating was permitted on the Central Park lakes for the first time this winter on Saturday, December 26th, when there was quite a rush to the park. By night the ice was cut up so as to be useless, and since then the thaw has prevented any resumption of the sport. At the Capitoline Lake, Brooklyn, there was excellent skating all last week, up to Saturday night, when the ball went down. At Prospect Park there has not yet been any skating, Central Park for once getting the lead of Brooklyn.

—The President of the Amateur Base Ball Association has appointed the following delegates to the recent convention on the several committees:

On Rules—Messrs. Darling, Kelly, Blodgett, Hooper and Carpenter.

On Printing—Messrs. Carpenter, Rowe and Clark.

On Nominations—Messrs. Cummings, Geare and Ronnecke.

Judiciary—Messrs. Hagner, Myers, Dawson, Maine, Moran, Stone, Hovey, Johnson and Hill.

On Basis of Representation—Messrs. Kelly, McCormick, Irving, Stockman, O'Rourke, Murphy, Colwell, Mulcahey, Purcell, Lamarache and Davidson.

On Junior Branch—Messrs. Dillon, Hayes and Gasland.

—Curling was indulged in by the Brooklyn clubs during last week, and a lively programme was prepared for the week before New Years, but the thaw which set in on Saturday stopped all the fun.

—The following club matches have been arranged for the season of 1874-5 by the Grand National Curling Club, the winners of each to receive a medal: Caledonian of New York against Yonkers, Burns of New York against Thistle of Brooklyn, New York against the Americans of New York, Caledonian of Brooklyn against Thistle of New York, Jersey City of New Jersey against Empire City of New York, Paterson of New Jersey against Ivanhoe of Paterson, Burns of Ogdensburg, N. Y., against Four Brothers of Canada, Caledonian of Buffalo against Burns of Cleveland, Thistle

of Detroit against Orchard Lake of Michigan, Granite of Detroit against Thistle of Chicago, Milwaukee against Chicago. The great game of the season between the North and South will be played, if the ice permits, on January 7th, and will embrace members from every club, entries to which close on January 4th.

—On Wednesday, January 6, Maurice Vignaux and Joseph Dion are to contest for the championship medal won by the former at the late tournament. The match will be played at Tammany Hall, and a close contest and fine display of the beauties of the French three-ball game is anticipated.

Chess.

CHESS DIRECTORY.—For the information of chess players visiting the metropolis, we publish the following directory of chess resorts in New York, Brooklyn and Jersey City, &c.:

Chess Players' Headquarters—Cafe International, 294 Bowery.

Jersey City Chess Club—Knickerbocker Cottage, 467 Sixth avenue.

Down-Town Chess Club—Cafe Cosmopolitan, 14 Second avenue.

Turner Hall Chess Club—Nos. 66 and 63 East Fourth street.

Brooklyn Chess Club—Mercantile Library, Montague street.

Jersey City Chess Club—No. 81 Montgomery street.

Crossen & Laibair's Chess Rooms—Corner Nassau and Fulton streets.

New Brighton Club—At Captain Taylor's, Tompkinsville avenue.

Christian Union Rooms—Fulton avenue, opposite Elm Place, Brooklyn.

THE NEW CAFE TOURNÉE.—The moves on the boards of the Cafe Tournée add about two or three games a week to the record, instead of ten times the number, and the result is tedious progress.

THE BROOKLYN CLUB.—Dr. Barnett still leads in the Brooklyn Chess Club tourney. Saturday nights the rooms are well attended, but not so frequently during other nights of the week.

A NEW CHESS MAGAZINE.—It is stated that Mr. Charles A. Alberg contemplates starting a new chess magazine, to be called *The American Chess World*. No one is more competent for the task, and with the facilities he possesses in his unequalled library of chess works, and his practical knowledge of everything appertaining to the game, the magazine would no doubt be a success. It will be issued from New York. He will be assisted by several chess writers, including Mr. M. Monroe.

THE NEW BRIGHTON CLUB TOURNÉE.—The tourney in progress at Captain Taylor's residence is rapidly reaching an interesting point. Thus far the Captain has the lead, with 17 victories and but 2 defeats, Mr. Heydenreich having the same record of victories, but one more defeat. Next to him stands Mr. Kecklie, with 13 won games and 6 lost, and Mr. Bagley with 9 victories and 7 defeats. All the others have lost more than they have won.

A TOUGH PROBLEM.—The Hartford Times in its Christmas number gives diagrams of a set of problems which is to be solved in "a quarter of a move," a half a move, three quarters of a move. One of the problems necessarily is, What is a quarter of a move?

—The Cleveland, (Ohio), Chess Club has reorganized, with thirty-five members, R. D. Updegriff, Esq., President. The club will extend a hearty welcome to chess players who may give them a call.

Canada.

—The Governor General of Canada has presented a handsome medal to the Lady Quoit Club, they defeating all competitors in the matches of last year. The medal is of massive silver, bearing on the obverse a portrait of Countess Dufferin, surrounded by the inscription "Earl of Dufferin, K. P., K. C. B., 1873," on the reverse the Dufferin coat of arms, and the motto "*per vires veritas*." The rim of the medal bears the inscription "Presented by His Excellency the Governor General, Studley Club, 1874." A gentleman who is so devoted to fostering physical prowess ought to be popular.

Another letter from Muskoka, written by Francis Jenkins, and dated Dec. 5, says: "I have shot eighty-three deer, three bears, and six wolves this Fall, and the best time is to come for deer shooting, besides fur, otter, marten, mink, and other small furs. On Monday I am off for a three weeks' camp with two young gentlemen from New York."

—When Mr. James Addy was elected Captain of the Port Hope Base Ball club, he accepted upon condition that swearing and intoxicating liquors should be prohibited on the ground and at all meetings of the club. The terms were complied with and strictly enforced. This example is worthy of imitation.

—"Bendigo," formerly a prize fighter, and champion of England, delivered a religious address recently to a crowded audience at the London Cabmen's Missions, at King's Cross. He says he was converted two years ago as if by a miracle.

—At a recent meeting of the Galt club the following officers were elected: Patron, James Young, Esq., M. P.; President, Thomas Easton; Vice President, Andrew R. Easton; Secretary and Treasurer, Robert Easton; Committee of Management, Robert Reid, John Mitchell and Alexander Mills; Representative Member, George Denholm. In the International Bouspiel, which will take place in February, the club will be represented by two rinks.—*Canadian Sportsman*.

A farmer named Bernier, of Ste. Brigitte de Laval, while out shooting partridge recently, found himself suddenly face to face with a panther, seven feet long, which he shot on the spot.

—Bellevue Curling Club is pitted against the Port Hope Club this season, to play for the Royal Caledonian medal.

—The London Curling Club has secured a new rink.

Prize List!

Remitting Money.—Checks on New York City
banks and bankers are best for large sums; make pay-
able to the order of Forest and Stream Publishing
Company 17 CHATHAM STREET, NEW YORK. Post
Office Money Order for \$50 or less are cheap and safe
also. When these are not obtainable, register letters,
admixing stamps for postage and registry; put in the
money and seal the letter in the presence of the post-
master and take his receipt for it.

Send the names with the money as fast as obtained,
that subscribers may get the paper at once.

Forest and Stream Publishing Company
17 CHATHAM STREET, N. Y.
Post Office Box 2835,

HURST'S Natural History Parlor Entertainment.

We are prepared to furnish the first sixty numbers
of the first series of

Animals and Birds of North America.

To these will be added a second series of foreign spec-
imens, and various Animals and Birds in grotesque ap-
pearances, never before violating their natural instincts.
We offer these views not as pictures only, but as
studies from nature. One of the great elements
in our modern system of education is object
teaching. The unerring fidelity of the stereoscopic
transfers the animals and birds from their natural
habitat to the rooms of the student, and the fire of
his senses, where the faintest fail to leave a lasting
impression of the form, color, habits, and locality of
each specimen.

An experience of more than twenty-five years as
Taxidermist of the New York State Cabinet of Natural
History, and in gathering his large collection of
natural and foreign specimens, enables Mr. Hurst to
combine in every view the locality of the specimen
with its appropriate rocks, woods or water, and coloring
from the original.

TESTIMONIALS.

CORNELL UNIVERSITY, I
ITHACA, March 15th, 1870.
I must congratulate you upon your great success in
this new educational enterprise. If we can arrange
our arrangements so as to make them impart interest
to the mind, it will be a step in advance in edu-
cation.

EDWARD A. SAMUEL,
Curator of Zoology in Mass. State Cabinet.

I am much pleased with the success you have met
with in giving to the student specimens a very decided
appearance of life.
I hope you may be able to continue the Series, and
I have no doubt they will furnish interesting means
of information and instruction in respect to the wild
animals of New York.

SPENCER F. BAIRD.

STATE HOUSE, BOSTON, Mass., March 15th, 1870.
I have examined carefully the "Stereoscopic Studies
of Natural History," and judging by the first ten num-
bers, should say that they will prove of very great
value both as object lessons for students, and as a most
interesting suite for the parlor Stereoscopic. The de-
scriptions are clear and color is admirably rendered,
and the general treatment are most perfect. I cordi-
ally recommend them to the public attention, and
trust you will meet with the success which you
have earned.

EDWARD A. SAMUEL,
Curator of Zoology in Mass. State Cabinet.

PEABODY ACADEMY OF SCIENCE,
Salem, Mass., March 15th, 1870.
I have shown your Stereoscopic views to the Direc-
tors of the Academy and the editors of the American
Naturalist, Dr. Packard and Mr. Morse.
They concur with me in praising their truthfulness
and the fact which you have displayed in surround-
ing the specimens with natural objects and scenery of
characteristic features. They are certainly better fitted
not only as parlor and drawing room illustrations, but
as educational illustrations for the use of schools and
colleges, than anything we have yet seen.

A. HYATT.

CORNELL UNIVERSITY, PRESIDENT'S ROOMS, I
ITHACA, March 15th, 1870.
I have received the Stereoscopic Views of objects in
Natural History, and have enjoyed them greatly.
They are indeed all that we have seen of the kind.
wonderful fidelity, both as regards the animals and
their surroundings; and I think they can not fail to be
great assets to the study of Natural History, and
by attracting students to it, and next by perfecting
them in it.

ANDREW D. WHITE.

American Wild Fowl Shooting,
BY JOSEPH W. LONG.

Describing the habits, haunts, and methods of
shooting wild fowl, with instructions concerning
guns, blinds, boats and decoys; the training of water
fowls.

This book is written in plain English, and in a most
attractive style. A broad, and at the same time ac-
curate view, is taken of duck shooting in all parts of
the country. The habits and feeding grounds of the
mallards, blue-winged teal, pin-tail, wood, gadwall,
and coot; red-heads, buff-breasted, and other
kinds of ducks, geese, swans, &c., have been carefully
and ingeniously studied and given to the reader.
In thirty chapters the author has furnished in-
formation for the young, as well as for the practical
sportsman.

A book for sportsmen, by a sportsman. "Argus."
"Tells where to find game in the morning, in the
afternoon, and in the evening."—Sun.

Almost indispensable to the sportsman. "Arcadian."
Published by J. B. FORD & CO., 27 Park Place, N. Y.

There are booksellers and the leading gun-
smiths. Price \$2. Sent by mail by the Publishers.

CUT CAVENTISH.

It is manufactured from the most expensive leaf;
is particularly adapted to Meerschaum and Cigarette
Smoking; does not bite or make the tongue sore, is
unique any other tobacco.

VIENNA, AUSTRIA, Nov. 30, 1873.

Messrs. Wm. S. Kimball & Co.,

Sirs:—A friend of mine sent me, with a transport

of Indian Shells, two boxes of "Vanity Fair," which I desire

to be the best Tobacco I ever smoked. We have very good

Tobacco in Vienna—Turkish and Imported. As "Vanity Fair"

is the King of all, by its aromatic flavor and the right sort of

tobacco, my friend in New York is applying to you, begging

you to send him for the same, a supply of "Vanity Fair,"

and send with the best steamer to Germany. If there is

any German firm that sells your excellent "Vanity Fair," I

keep you to receive me the address. Dr. Jos. Hertz.

CANADA, FAREWELL.

CANADA, farewell!
Thy Farewell to joy I farewell to youth!
My sad forebodings show me ruin,
My thirsty soul discerns no well
Of promise in my future fell.
My native land, farewell!

Canada, farewell!
We part, and I, whom woes betide,
As sadly wander from thy side,
As if I went my life to sell;
For fortune's harsh decrees compel
My native land, farewell!

Canada, farewell!
Farewell, thy streams and glassy lakes,
Thy Summer's suns and Winter's flakes,
Each hill and vale, and grassy dell,
One parting glance, I hear my knell,
My native land, farewell!

Canada, farewell!
Farewell thy clouds and azure skies,
Thy forests, where rare beauty lies,
And blooming flowers, loved so well;
I'm reu with grief I ne'er can tell,
My native land, farewell!

Canada, farewell!
I leave thee for a foreign shore,
And though I see thee never more,
Yet am I forced to break the spell
That binds me to thy side so well,
My native land, farewell!

Canada, farewell!
Farewell, bright land I loved with zest,
Grief fills my heart, and woe my breast;
The saddest thoughts my bosom swell,
Canadian borders, fare thee well!
My native land, farewell!

INTERIOR EXPLORATIONS—FLORA, FAUNA, AND GEOLOGICAL FORMA- TION.

[Continued from December 31st.]

CHAPTER II.

SEPTEMBER 10th.—From the first we had now and then crossed over marshes and open rocky spots in the forest. As we advanced these latter became more frequent. The change of sylvan scenery as we passed from one to another was enlivening and interesting, and afforded the luxury of a breeze that freed us from the host of blood-thirsty flies.

Early in the day, the ground descending, we came unexpectedly to a rivulet about seventy yards wide, running rapidly over a rocky bed to the Northeast, which we forded. The bed and shelving banks are formed of granite mica and transition clay slate rocks. Some of the latter inclined to serpentine, greenstone, red sandstone of the coal formation, sand, and beds of fine yellow clay. The water was in some parts brought into a very narrow compass by the rocks projecting from the sides. Large birch and spruce trees overhung the banks, and rendered the scenery pretty. It abounded with fine trout, some of which we caught. The sand was everywhere marked with tracks of deer. The roaring of a cataract of some magnitude was heard in the northeast. From the position and course of this stream, we inferred that it was a branch of the river which runs into Clode Sound into Bonavista Bay; and my Indian supposed, from his recollections of the reports of the Indians concerning Clode Sound River, that canoes could be brought up from the sea coast to near where we were.

Leaving this rivulet, the land has a considerable rise for several miles. The features of the country then assume an air of expanse and importance different from heretofore. The trees become larger and stand apart; and we entered upon spacious tracks of rocky ground entirely clear of wood.

Everything indicated our approach to the verge of a country different from the past.

We soon found that we were on a great granitic ridge, covered not as the lower grounds are with crowded pines, and green moss, but with scattered trees, and a variety of beautiful lichens or reindeer moss, partridge berries, *Vaccinium bunifolium*, and whortleberries, loaded the ground. The *Xylosteum villosum*, a pretty erect shrub, was in full fruit by the sides of the rocks; grouse, (*Tetrao albus*) the indigenous game bird of the country, rose in coveys in every direction, and snipes from every marsh. The birds of passage, ducks and geese, were flying over us to and fro from their breeding places in the interior, and the sea coast; tracks of deer, of wolves fearfully large, of bears, foxes, and martens, were seen everywhere.

On looking back towards the sea coast, the scene was magnificent. We discovered that under the cover of the forest, we had been uniformly ascending ever since we left the salt water at Random Bar, and then soon arrived at the summit of what we saw to be a great mountain ridge that seems to serve as a barrier between the sea and the interior. The black dense forest through which we had pilgrimaged presented a novel picture, appearing spotted with bright yellow marshes and a few glossy lakes in its bosom, some of which we had passed close by without seeing them.

In the westward, to our inexpressible delight, the interior broke in sublimity before us. What a contrast did this present to the conjectures entertained of Newfoundland! The hitherto mysterious interior lay unfolded below us, a boundless scene, emerald surface; a vast basin. The eye strides again and again over a succession of northerly and southerly ranges of green plains—marbled with woods and lakes of every form and extent, a picture of all the luxurious scenes of natural cultivation, receding into invisibility. The imagination hovers in the distance, and clings involuntarily to the undulating horizon of vapor, far into the west until it is lost. A new world seemed to invite us onward, or rather, we claimed the dominion, and were impatient to proceed to take possession.

It was manifested on every hand that this was the season of the year when the earth here offers her stores of productions; land berries were ripening, game birds were fledging, and beasts were emerging to prey upon each other. Everything animate or inanimate seemed to be our own. We consumed unsparingly our remaining provisions, confident that henceforward with our personal powers, which felt increased by the nature of the objects that presented themselves, aided by what now seemed by contrast—the admirable power of our fire-arms, the destruction of one creature would afford us nourishment and vigor for the destruction of others. There was no will but ours. Thoughts of the aborigines did not alter our determination to meet them, as well as everything living—that might present itself in a country yet untrodden, and before unseen by civilized man. I now adopted as well for self-preservation as for the sake of accomplishing the object of my excursion, the self-dependent mode of life of the Indian both in spirit and action.

To look around before we advance. The great exterior features of the eastern portion of the main body of the island are seen from these commanding heights. Overland communication between the bays of the east, north and south coasts, it appears might be easily established. The chief obstacles to overcome, as far as regards the mere way, seem to lie in crossing the mountain belt—of twenty or forty miles wide on which we stood, in order to reach the open low interior. The nucleus of this belt is exhibited in the form of a semi-circular chain of insulated paps, and round-backed granitic hills, generally lying northeast and southwest of each other in the rear of Bonavista, Trinity, Placentia, and Fortune Bays. To the southward of us in the direction of Piper's Hole, in Placentia Bay, one of these conical hills, very conspicuous, I named Mount Clarence, in honor of His Royal Highness, who, when in the navy, had been in Placentia Bay. Our view extended more than forty miles in all directions. No high land, it has been already noticed, bounded the low interior in the west.

September 11th.—We descended into the bosom of the interior. The plains which shone so brilliantly are steppes or savannas, composed of fine black compact peat mould, formed by the growth and decay of mosses, principally the *Sphagnum capillifolium*, and covered uniformly with their wiry grass, the *Euphrasia officinalis*, being in some places intermixed. They are in the form of extensive gently undulating beds stretching northward and southward, with running waters and lakes, skirted with woods, lying between them. Their yellow green surfaces are sometimes uninterrupted by either tree, shrub, rock, or any inequality, for more than ten miles. They are chequered everywhere upon the surface by deep beaten deer paths, and are in reality magnificent natural deer parks, adorned by woods and water. The trees here sometimes grow to a considerable size, particularly the larch; birch is also common. The deer herd upon them to graze. It is impossible to describe the grandeur and richness of the scenery; and which will probably remain long undefaced by the hand of man.

Our progress over the savanna country was attended with great labor, and consequently slow, being only at the rate of five to seven miles a day to the westward, while the distance walked was equivalent to three or four times as much. Always inclining our course to the westward, we traversed in every direction, partly from choice, in order to view and examine the country, and partly from the necessity to get round the extremities of lakes and woods, and to look for game for subsistence.

It was impossible to ascertain the depths of these savannas, but judging from the great expanse of the undulations, and the total absence of inequalities on the surfaces, it must often be many fathoms. Portions of some of the marshes, from some cause under the surface, are broken up and sunk below the level, forming gullies and pools. The peat is there exposed sometimes to a depth of ten feet and more without any rock or soil underneath; and the process of its formation is distinctly exhibited from the dying and dead roots of the green surface moss descending lineally into gradual decay, until perfected into a fine black compact peat, in which the original organic structure of the parent is lost. The savanna peat immediately under the roots of the grass on the surface is very similar to the perfected peat of the marshes. The savannas are continually moist or wet on the surface, even in the middle of Summer, but hard underneath. Roots of trees, apparently where they grew, are to be found by digging the surfaces of some of them, and probably of all. From what was seen of their edges at the water courses they lie on the solid rock, without the intervention of any soil. The rocks exhibited were transition clay slate, mica slate, and granitic.

One of the most striking features of the interior is the innumerable deer paths on the savannas. They are narrow and take directions as various as the winds, giving the whole country a chequered appearance. Of the millions of acres here, there is no one spot exceeding a few superficial yards that is not bounded on all sides by deer paths. We, however, met some small herds only of these animals, the savannas and plains being in the Summer season deserted by them for the mountains in the west part of the island. The Newfoundland deer, and there is only one species in the island, a variety of the reindeer, *Cervus carolinus*, or cariboo; and, like that animal in every other country, it is migratory, always changing place with the seasons for sake of its favorite kinds of food. Although they migrate in herds, they travel in files, with their heads in some degree to windward, in order that they may, by the scent, discover their enemies, the wolves; their senses of smelling and hearing are very acute, but they do not trust much to their sight. This is the reason of their paths taking so many directions in straight lines; they become in consequence an easy prey to the hunter by stratagem. The paths tend from park to park through the intervening woods, in lines as established and deep beaten as cattle paths on an old grazing farm.

Owing to the great abundance of the birch tree, (*Betula*

signa, all the brooks and lakes in the basin of the interior have been formerly and many are still inhabited by beavers, (*Castor fiber*), and these animals in many places have been destroyed by Indians. The bark of the birch tree, together with that of a dwarf willow, which abounds at the edge of the waters, is the favorite food of the beavers. They also subsist on the large roots of the white water lily, (*Nymphaea odorata*) called by the Indians beaver root, which they detach in pieces from amongst the mud at the bottom of the lakes and pools. They sometimes, although seldom here, eat of the bark of the spruce fir, (*Pinus balsamifera*). They obtain the bark from the trunk of the tree, gnawing their way through about two feet above the ground, and thus causing them to fall. The side on which a tree is intended to fall is cut two-thirds through, the other side one-third. Sometimes, as happens with the most experienced wood-cutter, a tree slips off the stem and will not fall to the ground owing to the support from the branches of adjacent trees. The work has then to be performed over again above the first cutting, as we saw had happened with the beavers in several instances; some of the trees thus brought to the ground were fifteen inches and upwards in diameter. The tree being felled, every branch by additional gnawing becomes accessible, and by sub-dividing, portable.

The sagacity displayed by the beavers in constructing their houses has been often described; but it is in their draining operations of the season is completed. They frequently dam up brooks and have birch trees growing plentifully along their margin and build their houses—with one always immersed or dipped into the margin of the lake thus formed. They also, by damming, raise the level of natural lakes—to accommodate the surface to some digible site near the margin, or on an island or rock, chosen to build their house upon. On first witnessing the extent of work performed of some of these dams, it is difficult to persuade oneself that it has not been done by man. The materials used are trunks of trees gnawed down by the beavers themselves for the purpose, mud, sticks, stones, and swards. Their houses are formed of the same materials, and resemble in their exterior a hemispherical mud-hovel—of from eight to ten feet in length—such as human beings, in some parts, dwell in, but without a visible door, or aperture for the escape of smoke. They have different abodes for summer and winter, situated in the former for four or five months, and the latter seven or eight months of the year, according to the temperature of the seasons. These are sometimes several miles apart. A winter house differs from a summer one—principally in being larger and more substantial. The chief entrance of both is under the surface of the water in the lake; that of the summer house about two feet, that of the winter about three feet. A house line often runs along the edge of the water on one side if the ground will permit, also under water for egress and ingress to and from the adjoining woods. If the entrance of the winter house was placed nearer to the surface than is stated, it might be frozen up from the outside during the severity of the winter, and a stop put to the egress and ingress into and out of the lake. In summer the beavers can travel up and down the brooks, swim round the lake, go into the woods in search of cones and return to their houses to rest. In winter the whole surface of the country, land and water being sealed under snow and ice, instinct directs these animals to concentrate at one accessible spot underneath a stock of provisions to subsist on during that season. It is easier for them to build a house close to where a winter stock of food is to be procured, than to carry this to the house occupied in summer, around which much of the food has probably been consumed. A winter stock consists generally of two old, and two, three or four young, will commence early in September to build a house for the winter, and soon afterwards to collect a stock of provisions. They fell tree after tree in the manner described as near as possible to the winter house, gnaw the branches into portable pieces, carry them one by one to the margin of the lake, swim with them to near the front entrance, and dive and deposit them to the bottom. If their wishes are inclined to do this, they stick one end in the mud and even have stones upon it. In October or November, by the time the lakes are frozen over, and snow covers the ground, the house is completed and the winter's stock of birch wood, with the bark on, placed around the entrance. Now in retirement they dive through to the bottom of the lake and bring up at pleasure to within the house a piece to eat of the bark, when the trip is very short and requires no more. Thus is the winter stock at the termination of it, when the ice disappears, the hundred pieces of wood, that seven months before were covered with bark are now to be seen deposited on the dam entirely peeled. The senses of hearing and smell, especially of the former, of the beaver, are exquisitely fine. It requires the utmost precaution and vigilance of the hunter to steal within shot of them without detection, and this must be always done from the rearward. Their sense of sight is weak, and they seldom appear abroad during the day. On account of the value of its skin the beavers are the chief object of chase with the Indians. These people having made themselves acquainted with the different spots throughout the island where these valuable animals abound most, hunt over these alternately and periodically, allowing them three years to regenerate. We shot many of them for food.

(To be continued.)

For Forest and Stream,

NORTH SHORE OF LAKE SUPERIOR.

BY PARSON SIDNEY WILMOT.

Leaving the little "City of Pines," where the Northern Pacific Railroad crosses the Mississippi River at just about the geographical centre of this great State, just after an early breakfast, we reached before dinner the "Zenith City of the Unsettled Seas." This is the name a witty Congressman gave Duluth. Meantime to ridicule its Western ambition and dampen its enthusiasm, he really gave the unique and plucky city a title at the head of lake navigation its best advertisement. We were bound for our first trip on the great Lake, and visions of big trout, such as the "Fishing Terrors" of the Negipon had described, danced before our eager eyes. On the staunch Canadian steamer Ontario we had put our boat and luggage for a quick passage to Silver Island, designing to work our way back along shore by a "white-ash breeze," when the "gentle zephyrs" which roar from the northeast would not fill our sails.

"We" were Captain Grant, of twenty years experience on the rugged coast—a good fisherman, an efficient carp-

manager, an experienced sailor, with the rare fault of cautiousness amounting to timidity—John, a clever and powerful half-breed; "good boy Fred," and the "Reclor," by whose invitation we were glad to be the pioneer of the "Brainier Forest and Stream" in this wonderful region your editor has so graphically reported to the angling world. On the same steamer with us were Bishop Whipple, of Minnesota (undeniably of the true apostolical succession, for his slouch hat bristled like a porcupine with hooks given him in all parts of the world, and a more graceful and energetic whiplow of trout streams, and a more genuine companion one could not find in his large lake-dotted diocese), who would his divinity waded, have thought could they have seen his dashing wading, his quick whirling of his two hands into a Japanese butterfly when we bragged of our big trout before he saw it, and heard his camp yarns; this is a long, awkward sentence, but anglers lives spin out when they don't expect it sometimes—Judge Wilder, of Red Wing, a most worthy companion of his Bishop, and three younger gentlemen, two green hands at fishing with a fine boat and outfit, and old Captain and little Indian. Our boyhood's dreams even never compassed a grand outfit or more engaging company.

Our famous rivals for the "speckled beauties" of the North Shore were to stop at Prince Arthur's Landing, one hundred and seventy-five miles from Duluth, and as we were going twenty-five miles further, and intended to be the last of the season, we had anticipated a race and keen competition in fishing. In the cold, foggy air on deck we needed more clothing than in a quiet morning here with the mercury at zero; but in the cabin was abundant good cheer, and any quantity of that expectant sportsmen's talk which so happily whistles away the hours. Fish and fishing stories, comparing tackle; snapping killing hooks, grasping lures, and all the lore of the coast; time passed by. At ten P.M. we heard the Bishop's party time to disembark, and at midnight eagerly carried our boat out at Silver Island, launched and landed her, and pulled for a camp-ground a quarter of a mile from the wharf.

We had dreamed of soft green sward, of romantic camps, of overhanging trees, of sheltered harbors. The best place the rocky town offered was a rough point where, scraping the level of the rocks, we could pitch our tent on a little level, though stony ground. But what was that to enthusiasts! We slept the sleep of the weary, and the next breakfast, cooked by our camp-fire, assured us that the jolly joys of "roughing it" had indeed begun. It seemed amazing to us that John and the Captain were so cool about sport. They enjoyed camp for camp's sake, and were not eager to end a fine. We nor was our zeal diminished at seeing a surprised and speckled trout which had been caught early that morning by a gentleman fishing off the rocks, who informed us that such fish were occasionally taken morning and evening miles away from any stream. After looking about the rough mining town, we rowed down shore a mile to pay our respects to General Sibley, the President, and Captain Druce, the efficient superintendent of the rich and wonderful mine which, although situated on the lake's edge, half a mile off shore, gives the name to the town on the main coast of the bluff shore, as bold as the sea-cave of New Hampshire, with water clear as the ocean at Isle of Shoals, the eager Reclor took with a trolling line a beautiful lake trout weighing seven pounds, which we weighed at once with our club scales taken for that purpose. He was much set up; and we waited our turn. On the same trip we lost a new spoon among the rocks. Returning over the same route, and before, some one discovered the spoon in ten feet of water two rods before we reached it, and it was soon fished up by another spoon. We had just finished our early supper when I saw some boys fishing from the rocks a hundred yards from camp. One had hooked, but lost, a big trout. My turn was coming. I wish I could say I took my eight ounce rod, with most delicate line and daintiest fly. For some reason I thought me to be better in the lake, getting "the rule" according to the rule, I pressed toward the mark" of perfection in appointments and practice in the high art.

But, Brother Hallock, "I cannot tell a lie, I did it with my" common joint-pole, an ordinary bass line and reel, and a small snelled hook baited with a piece of pork. Of course, I shall change my name when, in the future, I write for criticism, some account of exploits with a pole which is *not* but, the best of the pole in the world. I stood on a rock thirty feet from the water, I saw a large fish playing about the boy's beef-baited line, as if undecided which to take. The moment I offered it he took mine. I'm sure for the moment I shouted like a Methodist, rather than the sedate parson I really am; but as he started for deep water with a reel, making such music as I never heard before, I realized that all my small experience was to be utilized if I would land him. I called "Bob" to take out my watch to time the fight, and held that twitching, determined nose as near the top of the water as I could and away from numerous sharp rocks. Much of the time I could see him, and he was evidently so gamey a number of fishermen removed their lines to give me full play. How he rushed! Twice he leaped from the water. Three times he sent me from fifty to eighty feet into the lake. I was *in* but, how glad was I my line was long and well tied for the unfortunate "Reclor" had his untied line all reeled off and run away with by a large fish a few minutes before I struck him. At last he submitted to be towed gently along shore to a spot where I could clamber down by some coarse vines to a shelving rock, for I did not dare risk lifting his main weight in the air. "Buk," a good specimen of that enterprising country fellow you can always find in the lake, a man who will speak to him kindly, held my pole until I got down and then handed it to me. Glad enough was I to find my fish was not unhooked in the transfer. The sight of me drove him off in his last fierce dash for liberty, but he came back again subdued. I had no gaff nor landing net, and the waves were dashing nearly to my knees on the shelving rock. Bringing him carefully in on the crest of a big wave, I caught him well, I kept him in, and the recluses left him flapping at my feet. Grabbing him as lustily as ever a boy did his first shiner, and removing the hook, I ran at once to camp to weigh him—to get all the honest weight I could—while he was wet. I think he lost two ounces of blood, as the hook was deep in him; but I was glad to notch him at four pounds fourteen ounces, while John stuck to it "five pounds six, fair enough." He was twenty-two inches long, six inches high, and weighed sixteen pounds—the "biggest fish of the season" on that section of the North Shore. Report gives Lady Dufferin, who accompanied "My Lord Dufferin" on his grand excursion

up the Lakes, the championship of the Negipon; but I have heard no figures. Heroes of nine pounders will smile at my minuteness in describing so small a battle; but the average brotherhood will appreciate the exhilaration of such a capture by one whose previous experience had been in the "Hoaring Wepa-Wog" at Milford, Conn., where I never put my weight on a fish more than four ounces. Notching his length on my pole, and taking his tintype by the skill of a strolling artist, I sent him to a lady. Next morning we started on our long pull home. Of this in another paper.

Brunard, Minnesota, Dec. 26th, 1874.

For Forest and Stream.

A FORTNIGHT IN THE WILDERNESS.

BEING THE JOURNAL OF A PARTY THAT SPENT TWO PLEASANT WEEKS IN THE SUMMER OF 1873 IN EATING, SLEEPING, ROLLING, AND TROUT FISHING IN THE WILDERNESS OF NORTHERN NEW YORK, TO THE GREAT BENEFIT OF THEIR PHYSICAL BEING, AND WITHOUT HARM TO THEIR SOULS, OR INTERFERENCE WITH THE RIGHTS OR ENJOYMENTS OF THEIR FELLOW MEN.

THE party, consisting of two middle-aged gentlemen, viz., Richard U. Sherman and Josiah L. Foote, both residents of the pleasant city of Oneida, two sons of Sherman, viz., James, aged eighteen, and Sanford, aged sixteen years, with their young friends, Edward B. Green, eighteen; Clark S. Bailey, seventeen, and Wm. P. Abbott, seventeen, left Utica on Friday, July 18th, 1873, by the Black River Railroad, en route for the wilderness of Northern New York, where it has been the custom of the elder Sherman to spend from two to four weeks in the pleasant Summer months of the year for the past twenty-five years. The route was eighteen miles by rail, twenty-two by good wagon road, and after that four by foot, travel to their final destination, which was a pleasant stream, hereafter to be described, a few miles from the southern border of the great wilderness which forms the larger portion of Northern New York. Their outfit was complete for the occasion. Each man and boy had his pack basket, in which his luggage was neatly packed. This consisted of two or three knapsacks, by pack straps, and carried like knapsacks. In this manner a weight of thirty to fifty pounds may be carried by a person of average strength many miles a day without severe fatigue, the straps acting after the manner of shoulder braces, and permitting free action of the lungs. The outfit of each person consisted of two suits (including the one worn) of stout, colored clothes, thick army blanket, a rubber poncho, felt hat, two or three pairs of shoes, and leather slippers. Each man had his knife and fork, tin cup, plate and spoon, two towels and such little articles of the toilet as his tastes required. Each had his fishing rod, basket, and minor tackle, and to the whole party was one rifle and one shot gun. A complete cooking kit, consisting of camp kettle, frying pan, coffee pot, etc., including a small tin Dutch oven, formed an essential part of the outfit, and the supply of provisions inventoried out as follows: Bacon and ham, forty pounds; dried beef, twelve pounds; self-raising flour, eighteen pounds; potatoes, sixty pounds; corn meal, oat meal, and crushed wheat, fifteen pounds each; mixed crackers, twelve pounds; bread, twenty-five pounds; sugar, twenty pounds; butter, twelve pounds; dried fruit, twelve pounds; Bermuda onions, twenty pounds; condensed milk, six cans; beans, six cans; rice, sixteen pounds; and small stores, such as pepper, salt, matches, candles, lemons, maple syrup, tea, vinegar, etc., to match, the whole being estimated on the basis of two and a half pounds of solid food per day to each person. Two axes, a cross-cut saw of the "lightning" pattern, and a hatchet, completed the outfit. The journal of the party's movements commences with the start from Utica on Friday, July 18th.

Friday, July 18th.—The party left Utica at eight A. M. by railroad for Prospect, eighteen miles distant. Arriving there we found the transportation ordered awaiting us. The members of the party were stowed in a large spring wagon, and the supplies and baggage in another. We stopped to lunch at Paul's "Hunter's Home," fifteen miles distant from Prospect, and on the border of the great woods. Nothing eventful occurred on the day's trip till we crossed the east branch of the West Canada Creek, one mile east of our stopping place for the night. Here, some eighty yards distant from the road, we observed a huge black bear in chase of a flock of sheep. On seeing us he abandoned the pursuit of the sheep and retreated slowly to the adjoining thicket, not disappearing, however, till Clark Bailey, who had a good breed, shouting and firing, sent him a parting salutation. The shot was an excellent line one, but struck a tree about a foot above the bear's back. At six P. M. we arrived at Becraft's. This is the last house in the settlements. It is situated in the town of Morehouse, Hamilton county, on the West Canada Creek, and about forty miles northeast of Utica. It is the end of the road, which would here butt into the mountain, but that, to save its brains, it loses itself in Becraft's saw yard. The locality of Becraft is famous with all who visit this region. Come when they may, morning or evening, midnight or noon, there is always a welcome for them, and the house, though old and rickety, and boasting not over half a dozen rooms altogether, seems, in the spirit of its hospitable host and hostess, to expand with the occasion. None were ever denied a night's free lodging in it, and none ever left its doors with appreciation of the kindness of the host and hostess. The house was a pleasant home to all, and leave enduringly impressed on the memory a grateful sense of her kindness. A bountiful supper awaited us, and a comfortable night's rest prepared us for the anticipated labor of the morrow.

Saturday, July 19th.—We awoke to the music, not of singing birds, nor to the piper, but the splash of rain on the roof. We hoped it would clear away before noon, so that we might pack for the woods, but it did not. It continued to rain heavily during the day, and we were forced to postpone the departure for the morrow. The day was spent in alternate cure and eating. As there is nothing particularly worth recording of the day's incidents, we may as well devote a few lines to a description of our place of destination. The water called the "Metallic" is a cold spring, and its water rises to the surface of the earth, so that, in general course is westerly, and it enters the north branch of the West Canada Creek about four miles above Wilkins' son's, which is the last settlement on that line, and nearly

opposite Jock's Lake outlet. It is one of the hundred or more tributaries that go to make up the volume of West Canada Creek. This latter stream is one of the most remarkable of the many beautiful flowing waters of New York, drawing from a water shed nearly equal to that of the Hudson, converting at Hinchley's Mills, two miles above the celebrated falls of Trenton, millions of feet annually of the timber of its upper forests into marketable lumber, and contributing to the Mohawk, where it enters that river, twenty miles below, a volume of water equal to its own above that point. Nowhere on the Metcalf is the hand of civilization visible. No settler's habitation has ever been seen on its banks. The bear, the wolf, the panther, and the owl form the population of the forest, and the speckled trout sports in teeming swarms in its cold and pellucid waters. The voice of the hunter, the trapper, and the fisherman are occasionally heard here, but the loving of kine, the prattling of children, and the sound of church bells never reach this lonely scene. This was the paradise to which our footsteps trended.

Sunday, July 20th.—The morning broke lowering, but there was no more rain. The drift of the clouds was to the eastward, so that there was promise of good weather before the day should be over. When in camp on Sunday we were not so much concerned with the weather as we are to spend the day as men brought up in a Christian land should do; but a party en route for the wilderness, like an army, must move according to circumstances. It is from no lack of reverence for the Christian Sabbath that we take up our line of march to-day. If we wait we may not have as favorable weather to-morrow. So at eight o'clock A. M. we are packed and ready for a start. The supplies and baggage are loaded on the horses, two miles distant, by a light lumber wagon drawn by two stout horses up a mountain road, where the rise is at least 500 feet to the mile. The party on foot precede the wagon. At nine we are at the lake, where Frank French, the warder of the log castle that overlooks that beautiful sheet, awaits us with his large boat. Wilmut Lake is situated as nearly as a lake can be, at the top of a mountain. Its waters are of crystal purity, and its golden sand and its trout are the best of any in the wilderness. The lake is, however, private property, and none are permitted to fish but its owners. We cross the lake to the commencement of the trail on the opposite shore. At ten we are packed for the camping ground, still two miles distant. Five good stout packers accompany us to bear the heaviest burdens. Each member of the party shoulders his own traps with such else of the general luggage as he can bear. Our friends, Babcock and Van Dyke, who are guests at French's, volunteer to accompany and see us settled in camp, and they, too, shoulder packs. The scene, as the fourteen heavily laden pedestrians defile through the forest, singing: "O, 'aint you glad we're going in the wilderness?" was picturesque. At eleven o'clock we were at Snag Lake, a pretty sheet of water a half mile long and a quarter broad, where we made our first halt. The trail to the foot of the lake, leading over jagged rocks and through tangled wind falls, was a difficult one, and we paused again to rest at the foot. Thence we tramped to the Metcalf without further halt. We reconnoitered a little for a good camping place and finally selected one on a heavily wooded knoll between the two principal pieces of stillwater, the stream immediately in front of the camp being rocky rapids. On the pretty view opens beyond the stream, the rugged, rocky, precipitous, and jagged rocks abruptly to the rapids. A cold spring stream, furnishing us with an abundant supply of the purest water, rippled at the foot of the knoll at the West. As by magic the scene is transformed. The blows of axes resound in the forest and the leafy monarchs are soon falling around us. Our habitation is to be fifteen feet long by nine deep in the clear and eight feet high in front. Well jointed logs form the structure, the rafters, the rafters, the rafters, the rafters, and the roof and the sides above the logs of smooth spruce bark. By four P. M. the structure is complete. The cracks are well chinked and stuffed with moss and a bed of sweet hemlock boughs supplies the place of both floor and bed. A bright log fire is soon ablaze in front, and a heavy supply of bacon, eggs, crackers, and Bermuda onions having been disposed of, we lay down on our blankets, with heat as grateful as the cold. Our friends, Babcock and Van Dyke, have placed these enjoyments before us, as any that worship within ethereal walls. The grand old anthems, "Old Hundred" and "Coronation," are sung in concert by the party, and then all compose themselves for sweet sleep and pleasant dreams.

Monday, July 21st.—After a quiet night's rest, unbroken by howl of wolf or howl of owl, we were up by times. Breakfast at six and then the camp being fully formed, the first thing to do was to place, at which the following "orders" are promulgated:—

GENERAL ORDER NO. 1.—CAMP TOWN, ON THE METCALF.

I.—The camp is christened "Camp Todd" in honor of our absent and lamented comrade, Captain W. D. Todd, the efficient A. G. and F. A. C. of the memorable Pine Lake party of 1872.

II.—The following are the names of the officers and men:

Assistant Adj. General.—Captain Josiah L. Foote.

Chief Chaplain.—Jas. S. Sherman.

Scoutmaster.—Charles Schenck.

Scoutmaster.—Sanford F. Sherman.

III.—The position of First Assistant Cook, (the illustrious Chief of the Kitchen, whose services are so much appreciated and much needed by the absence of Captain Todd), will be filled under the operation of the Civil Service rules not administered by the Government of General Sherman, and the position of Second Assistant Cook will be filled under the direction of the Chief Cook, perform such duties as Assistant Cook as shall be assigned him, and no dual appointment of Assistant will be made. The duties of the Chief Cook will be to see that the daily detail of dish-washers, assisted by the Landrover as Chief Wiper.

By order of the Chief of Expedition.

J. L. Foote, A. G.

At eleven A. M. our ears were saluted by sounds rare to this wilderness—the merry voices of young women. The party had been at the falls for some time, and the water had risen. Soon emerged from the thickets that surrounded our camp a bevy of blooming girls. They were the Misses Babcock and Van Vorst, who were sojourning at Wilmut Lake with their fathers, our volunteer aids of yesterday, and had come two miles over the mountain to make us a neighborly call. Frank French accompanied them as guide, and young Frank Babcock, come also. The young gallants of the party did their prettiest to entertain their fair guests. They sat to dinner with us, and a good dinner it was. The competing candidates for assistant cook did so well that they were all breasted as assistant cooks, and Capt. Foote, for his surpassing skill and experience, was given linear rank in that honorable office.

Just as the dinner-hour was sounded, there were two other arrivals in camp, viz.: Mr. E. D. Farrell, of New York, with Giles Becraft as guide. They were en route for

Little Rock and some unexplored lakes beyond. We had thus a party of fifteen at our dinner-board—a party greater in number than had ever before assembled on the Metcalf's banks—and a merrier party never gathered together anywhere. Our lady friends, with their escort, left us at four P. M., much to the regret of all, especially of the young boys of the party, whose admiration for calico and bows, even the charms of the wilderness could not abate. This afternoon several of the party went out on the stream to fish. Abbott and young Sanford Sherman had the honor to open the dance with the trout. They came in early with sixty-six in number. Jns. Sherman and Green soon followed with a couple of dozen, and Giles Becraft brought in sixty-six. Thus in a short time and with little effort we had a two-day's supply, proving the excellence of our selection for a fishing ground. Trout for supper—the first we had eaten on the trip—royally cooked by Brevet-assistant Green, with fitting accompaniments from our bountifularder, and the meal was pronounced by all, "The best yet."

In preparation for the camp fire to-night stupendous feats of chopping, lifting and log-rolling were performed under the engineering skill of the party, and the aid of his strong arm. A log weighing not less than a ton was impelled up the hill and into its place for a back-log. Its fellow was placed on top, and one but little less in bulk mounted on spruce and fir for a forestick. Ample store of dry balsam was piled on these, and we defied cold and storm. "Early to bed" is our motto in the wilderness, and before ten o'clock the party was snoring in discordant but able-bodied concert.

Tuesday, July 22d.—After a night's sound sleep, the party rose "like giants refreshed." With that tendency to barbarism which men are apt to feel when living a life close to nature, we resolve ourselves into a band of Modocs. We have no lava beds for our haunts; but this forest fastness, with its mountain precipices, its treacherous morasses and its rushing waters, afford us an equally safe retreat from that in which the Pacific coasters so long defied the military power of the nation. To be sure, we have no war paint; but the tar and lissed which we have brought to ward off the attack of the musketoes, will answer for facial decoration; a blue jay which Clark Bailey shot yesterday furnishes the feathers, and if the boys continue to tear their clothes, as they have done the few days past, they will soon enough come to *breach* their tunics. Nothing is now wanting to complete the transformation into a savage life but a new christening. This is readily had. Behold, therefore, in all the paraphernalia of "big Injun," the array, as follows: Chief Modoc, "Captain Jack"—Sherman, Sen.; "White Stocking Joe"—Foote; "Smooty-face Clarke"—Bailey; "Hunky Jim"—Jas. Sherman; "Shack Nobby Ned"—Green; "Smoke-out Bill"—Abbott; "Schonchin Sanifer"—Sanford Sherman; "Steamboat Frank"—Young Babcock.

These names, like those of the true Modocs, have a personal significance, well understood by the members of the party. Two of our jaunty young braves, namely—Shack Nobby Ned and Hunky Jim—went over to Wilmut to-day to return the young ladies' call. Nothing else eventful occurred. Farrell and Giles started after breakfast on their trip of discovery and exploration; and the remainder of the party lunched and snoozed alternately till dinner time. For this meal we had jerked beef, stewed, with eggs and crackers, fried trout, succotash, stewed dried fruit, and the never absent Bermudas, with a cup of good strong tea for beverage. "The best meal yet." White Stocking and Smut Face came in at dinner time with sixty-two trout, and Smoke-out Bill brought in sixty more soon after. So we were still two full days' ahead on our trout supply. At nightfall our young braves returned, bringing in two welcome recruits, viz.: Mr. C. P. Kirkland, Jr., of New York, and his nephew, Charles Kirkland Seward, of Utica. They were immediately adopted into the tribe, assigned places in the wigwam, and christened respectively in the Indian fashion as Bald Head Charley and Sandy Squirrel. Supper over, a huge fire was built in honor of the new comers, and what was meant for joy was soon, alas, turned to tears. A zephyr sprang up in the north. Northern zephyrs are not, as a general rule, bad things in July; but when your camp is an open one, and facing due North, with a roaring fire in front, they may make more discomfort than Arctic blasts. The inmates of the camp were soon smoked out, and took refuge in the soft places of the surrounding forest. The smoke did one good thing, and drove the flies to more congenial retreats, and so left us free from that pest. Towards morning, as the fire burned down, the uneasy slumberers, "laying around loose" in the forest, gradually crawled back to the shanty, where, after a few hours' comfortable sleep, they were again equal to breakfast duty.

Wednesday, July 23d.—A good square meal—"the best yet"—fully restored the physical equilibrium. At eleven A. M. we were having another call from the Wilmut ladies. They were accompanied this time by Mrs. Lewis H. Babcock, mother of the young ladies of that name before spoken of. Mrs. Babcock has visited at different times most of the lakes in this part of the wilderness, and is an enthusiastic lover of woods life. She made a visit to-day to Little Rock Lake, two miles north of our camp, and on her return she accompanied the ladies for their farewell. Smoke-out Bill, Ned acted as their escort back to Wilmut, while Smut Face, White Stocking, and Hunky Jim started up the stream on an expedition to Big Rock Lake to hunt for deer. Big Rock Lake is situated three miles from our camp. To reach it the boys waded up the Metcalf a mile till they reach the mouth of Big Rock outlet, thence up the rocks that compose the bed and borders of that stream, and then, after a climb of two days' rascals, and intend to float for deer to-night.

Thursday, July 24th.—To-day an accident occurred which caused some concern at first, but which the skill of our master mechanic converted into a triumph of art. The spout of our family coffee pot melted off under the fierce heat of our camp fire, and as cooking utensils are not numerous in camp, nor the means of replenishing the stock of fuel at hand, it was likely to lead to serious consequences. The damaged utensil was turned over to Smut Face for inspection. Fortwith, from the depths of his pack, he fished up a small lump of solder, which, by some kindly providence, he had been impelled to put there while packing up his traps for the trip. A piece of spruce gum from the bark of a neighboring tree furnished the resin, a bullet mold made a serviceable press, and a rat tail, which he had in his pocket, was used by Clark's skillful manipulation, the spout was restored, and we were all happy in the possession of a serviceable coffee pot.

There is nothing like necessity to stimulate ingenuity, and the woods is the school to furnish the stimulus. For his success, "Smut Face" was immediately commissioned "master mechanic of the expedition, to be obeyed and respected accordingly."

Friday, July 25th.—The usual round of eating was gone through with to-day, each meal closing with the unanimous expression on the part of all—"The best we have had yet." Bald-head Charley, who previously to his adoption of savage life, had been a distinguished member of the New York bar, showed himself so efficient to-day in dish washing duty, it being "his wash," that the dignity of dish washer in chief was conferred on him, with the approbation of the whole party, and thus it proved to the world, in the face of its prejudices, that some good may be got out of even a lawyer.

Our chief to-day dropped his first line to the fish. The communication seemed most welcome, for he came in before two o'clock with his basket full to the brim. He had gone further down the stream than any others of the party, and had struck a rift where the trout fairly leaped into his net. Others of the party from both up and down stream also brought in large supplies, and the camp was kept still two days ahead in its store of fish.

Eating, fishing and sleeping are good things in their way; but variety is the spice of life, and we began to want a little of this sort of seasoning. Music has charms for any situation, and it occurred to the fertile brain of our admirable Assistant Adjutant General, that with all the musical talent in our party, we might have a little preparation, a band of music. Neither instruments nor performers were lacking to a full orchestra. So, obtaining an investment from our chief of the office of "Band-master," "White Stocking Joe," extemporized quite the most remarkable band that ever played in this wilderness. The cast was as follows:

First Horn, (the dinner horn).....	White Stocking Joe.
Second Horn, (from a bottle).....	Capt. Jack.
First Frying pan.....	Shack Nobby Ned.
Second Frying pan.....	Schonchin Sanford.
First Kettle.....	Smoke-out Bill.
Second Kettle.....	Hunky Jim.
First of the tin plates.....	Smoke-out Bill.
Second of the tin plates.....	Smoke-out Bill.
Band-leader.....	The remaining Modocs.

This evening being the first of the organization there was a grand serenade in camp. The band was complicated in excellent terms, from a high stump, by Captain Jack, who not being quite up in the vernacular of the Modocs, spoke in a dialect which answered as well, and corresponded admirably with the music. Such was the envy which the performance excited among the other musicians of the forest, that even the frogs ceased to pipe and the musketoes to hum, and if there were any wolves within a mile of the camp, they must have died of chagrin to have had their own performances so completely outdone by a company of mere tyros.

(To be continued.)

THE RED RIVER COUNTRY.—The Chatham New Brunswick *Advertiser*, published by D. G. Smith, Esq., formerly editor of "The *Quip*," a sort of provincial *Punch*, is printing some interesting letters from the Red River Country, Manitoba. We make a few extracts:—

Two distinct classes of half-breeds are, in this region, designated as English half-breeds, and French half-breeds. A singular peculiarity seems to draw the distinction, the English half-breed taking more after the white, and the French half-breed more after the Indian. This would almost seem a problem curious enough for a Darwin genius to investigate for solution. Then, again, the English half-breed seems to take naturally to the cultivation of the soil, is provident and staid, whilst, while the French half-breed cares little for anything but agricultural pursuits, and is fond of hunting the buffalo, galloping over the prairies, fiddling, dancing, and horse-racing.

The riding uniform of a French half-breed is thus described:—"A fur cap, capote or cariboo shirt, leggings and moccasins to match, flint-lock guns, and mounted on roving little Indian ponies, caparisoned with a gorgeously worked heated saddle-cloth, and beaded saddle. The ponies are not a walk or gallop, but a peculiar mode of motion, except when racing or chasing the buffalo."

Buffalo hunting begins with the setting in of Winter, and dog trains with small carioles, called also toboggans, are used. The dogs are generally of the Esquimaux breed, and are called "Huskies." The dogs are fed once a day with fish, or about a pound of pemmican. This keeps them in good condition. The inhabitants of Red River, Scotch or half-breed, wear a costume made of moose or buffalo skin, Summer and Winter. They are the fortunate possessors of a splendid country. As regards the soil, it is one of the gardens of the earth.

A curious custom of Red River is, that on New Year's Day, whether at a wedding, a chance meeting, a dance, in "calling," or otherwise, the men and women kiss each other as the New Year salutation. The highest compliment to an Indian woman and white woman used to take the kiss as a matter of course, even from entire strangers. The custom is becoming obsolete, however. The advent of so many strangers is making reforms in many ways.

The half-breed, like his half-brother the Indian, is generally an inordinate eater. An Indian and a half-breed sat down on one occasion to test their gastronomic abilities on a cooked fish, weighing close on twenty-five pounds. They finished it, leaving only the head and bones. Not yet fed they devoured a quantity of pemmican—and yet seemed hungry. At a citizens' ball in the village, now town, of Winnipeg, a stout half-breed sat at the supper table, and taking up a fork, deliberately transferred a whole duck from the dish to his plate, and after totally demolishing it, proceeded to partake of his supper with a keen appetite.

CHLORAL FOR HEADACHE.—Dr. E. M. Nolan, in the *Atlantic Medical and Surgical Journal*, describes the following cure of a very painful headache in a lady. He dissolved fifteen or twenty grains of chloral in very little water, and with the tip of a finger rubbed it upon one of her temples until she could sensibly feel the burning, and the skin was reddened. The part rubbed was no larger than a silver dollar. The pain was entirely relieved and remained so. This doctor has also used this remedy with success in many other applications for headache with success in many other applications, sometimes rubbing on one temple, and sometimes on both. No permanent sign is left.

AN EPIGRAM FOR "LO."—Loathe the poor Indian.

the buck's hoofs and kill the deer, the buck charged me six or seven times, making me get behind trees, until the dog attracted his attention in the rear. The battle lasted some five minutes, and was pretty close, till I brought it to an end by shooting the deer through the heart, as the buck had knelt down the dog under his feet, and was doing his best to "discourage" him. I dressed the dead buck, tied the liver to my belt, and hurried to camp to examine it before it could freeze. I found it contained many of the oval leech-like worms above mentioned, and like the doe's tail was disfigured and drawn out of shape by the parasites. I have preserved some of the cells with the worms complete, also empty cells and portions of the diseased liver, and when I reach home, where I have facilities for examining them, I will write you more fully on the subject.

P. S.—The mercury is below zero, and writing in a shanty with the door open to admit light (and cold) is detrimental to navigating a pen.

Very truly yours,

J. H. BATTY.

We have often seen these "blood-suckers" (as hunters call them,) in the livers of deer killed in mid-summer, and always regarded their presence as a condition or indication of ill health, and a strong argument against the eating of venison killed out of season. By autumn we had supposed the deer got rid of these parasites in some mysterious way, we never heard any one attempt to explain how, but the fact as stated above affords proof positive that their presence is not confined to any particular season, and naturally suggests the inquiry whether such presence renders the carcass unhealthy or unfit for food. Worms are also found in the nostrils of deer in the spring, when they are lean and sickly, thereby destroying their sense of smell; and old hunters have told us that there is an oil bag in their hind leg, near the fetlock, in the hollow of the joint, which the deer break, and applying the contents to their noses, thereby relieve themselves. As deer depend more upon the sense of smell than sight for protection against enemies, their lives would be measurably imperilled by these worms stuffing up their nostrils, did not nature thus provide a remedy. We mention this at the risk of appearing credulous, and exposing our own ignorance. We have never seen the subject referred to in works of natural history, and would like to be informed in regard to it by any one competent to corroborate or give an intelligent explanation of these statements. —[Ed.]

For Forest and Stream.

THE BIRDS OF NEWFOUNDLAND.

[CONCLUDED.]

Wild Geese and Ducks.

BY far the most common species of geese in Newfoundland is the Canada goose—*Branta canadensis*. They arrive in vast numbers in April and May, but the greater proportion pass on to more Northern regions to breed. Some, however, remain for this purpose in Newfoundland. There is a marked difference in color between the sexes, the male being a light grey, the female dark grey, almost black. There is perhaps no finer table bird than the Canada goose, and none, with the exception of the partridge, which is more attractive to the sportsman. It is no easy matter to entice these wild geese to swim towards the shore. Should the sportsman have no dog he must catch one of them by imitating its cry, or "croaking," as the settlers phrase it. The more usual method, however, is the following:—The sportsman secretes himself by the edge of any pond on which geese are seen, and keeps throwing a glove or stick in the direction of the geese, each time making his dog retrieve the object thrown. Soon this process arouses the curiosity of the geese, who begin to swim towards the object. Should the sportsman have no dog he must catch one of them by crawling on his hands and knees in and out of the bushes—a method which, if continued for any length of time, becomes anything but pleasant. The stuffed skin of a fox, however, will answer the same purpose admirably, especially when the geese are near the shore, by tying it to a long stick, and imitating the motions of a dog retrieving any object. It has been observed that when on the wing, either in flocks or in pairs, a leader leads; and the rule here is to fire at the hinder bird, not only because the goose is the fattest, but because the leader will generally hover over his dead mate for some time, and thus his affection often proves fatal to the husband, as a second barrel will bring him down. This bird, like the domestic goose, is long-lived, the average length of life being from forty to fifty years.

The Brent goose is very common on the Southern and Western shores of Newfoundland, but is rarely seen North of St. George's Bay. From Port-au-Port they cross to Anticosti and thence pass up the Labrador shore.

Ducks.—Perhaps the finest table bird found here is the black duck, or common wild duck of the island, which lays from ten to fifteen eggs and breeds on the borders of lakes and rivers. It is no easy matter to get within gun shot of this shy bird, as "it will wind you like a deer."

There is another duck well called by the settlers the "Pie Duck," the young of which is considered a delicacy. It is one of the first to arrive in Spring and remains till frozen out in the Fall. It is a curious fact that this duck makes a hole in a rotten tree and there builds its nest, sometimes near the ground, often at a height of twenty feet. This species is the American golden eye.

Long-tailed Duck, or Linnard.—This handsome bird is very abundant along the coast in Fall and Spring, but does not breed here. Our settlers call them "hounds" from the resemblance which their clamorous cry, in a flock, has to a pack of hounds in full cry. This cry is "caw-caw-wit!" "caw-caw-wit!" and when borne on the wind from a distance it really has some resemblance to the cry of a pack of hounds. These "hounds" are most expert divers, and when the day is dull and cloudy, or with snow upon the ground, it is almost impossible to kill them, as they dive at the flash with the rapidity of lightning. On bright days, however, they can be shot as easily as non-diving birds.

American Eider Duck.—This species is called "the sea duck" by our settlers, and until the last few years was the most abundant species of ducks in Newfoundland. The increase of population and the destruction of its eggs have recently reduced its numbers. So abundant was it formerly, that one time that it was nothing uncommon for a settler to kill from fifty to a hundred at one shot. Sometimes as many as twenty are still knocked down by a single shot.

King Eider.—The adult male of this species is a large, handsome bird, much sought after by ornithologists. Here it is called "the king bird," and is often shot during the periodical migrations in company with the eider duck.

Harlequin Ducks.—The male and female of this species are called by our settlers "lords and ladies," and are beautiful birds, and perhaps the most expert of divers. The sportsman is amazed to find that one of these birds can escape the shot of his percussion gun by diving, though sitting quietly on the water at a distance of but twenty yards. Sometimes, too, he fires at a flock on the wing, and is delighted to see the whole flock drop apparently "stone dead" into the water; but presently his astonishment is great when he sees the little Harlequins all on the wing unhurt, and just out of the range of the second barrel. Other species of ducks occasionally met with here are the surf duck, the American scoter and the velvet duck.

Stormy Petrel.—The stormy petrel, or Mother Carey's Chicken, is a common summer migrant, and breeds on many of the islands round the coast. Wilson's stormy petrel is also seen occasionally. Three species of shearwaters are met with in the Gulf of St. Lawrence, on the Banks of Newfoundland, or in the Straits of Belle Isle. They are rarely if ever seen on the island near the coast, and their breeding places are probably some of the surrounding islands on the Banks, where formerly the great auk found a favorite resort.

Gulls.—Fifteen species of gulls have been observed in Newfoundland, of which the ring-billed gull is the most common, its local name being "the saucy gull." They are all carnivorous, but this one is specially so. No sooner is a dead or dying bird visible on the water than it is espied by these gulls, who gather round in noisy circles and speedily devour everything but the bones and feathers. Bonaparte's gull and the ivory gull are seen occasionally in the Straits of Belle Isle and on the Northwest coast of Newfoundland.

Great Northern Diver.—This bird is called here the "Loo," its proper name being "Loon." It is a common summer migrant, and at that season nearly every lake is tenanted by a pair of "loos." It is believed that the same pair return to the same pond or lake for a long period, and thus destroy the continuity of the flock. They are very awkward waders, though wonderfully strong on the wing; and breed on the lakes of the interior.

Having formerly in a separate paper in FOREST AND STREAM described the great auk, once so abundant around these shores, and now believed to be extinct, I need not now return to the subject. The little auk and the common guillemot, or murre, are periodical migrants here and breed on the islands and north of the island. Altogether upwards of two hundred species have been identified as belonging to the avifauna of Newfoundland; and doubtless future observers will add greatly to the number.

M. HARVEY.

MISPLACED CONFIDENCE.—A crack shot and good fellow from New Orleans, while hunting along the railroad track a short distance from that city, discovered a large alligator swimming across a bayou to the place where he was standing. This was a strange proceeding, as alligators usually do quiver the levee, but this one, being very large, and looking savage, our friend thought it a challenge and gave him a ball just back of his flippers. The old fellow turned back at this, recrossed the bayou, about twenty yards wide, and crawled up the bank, when a second shot laid him out. Just then a party of track repairers ran up to look at the game and offer congratulations to our mighty hunter expected, when what was his surprise to find himself instead of the alligator surrounded and in imminent danger of having "his head punched" by an angry crowd. He had killed their pet, one they had been feeding for two years. The alligator had crossed over, seeing a man standing there, in friendly expectation of something to eat, and became a victim to misplaced confidence. Full apologies and explanations were made and grumblingly accepted.

However, I would not advise any of your readers to attempt to domesticate alligators, as they may do very well to waste provisions on, but as playthings would not probably prove a success. *

—The following amphibious story is going around:—

A shower of white toads took place in Larinee county, Colorado, lately. The shower embraced a strip of country half a mile wide and several miles in length. From a distance the frogs, as they bounced along the ground, looked for all the world like hail stones. After the storm the frogs hopped about over the country in droves of ten thousand.

JACKSON, MISS., December 22, 1874.

EDITOR FOREST AND STREAM.—Your issue of December 17th contains an article on "Suicide of a Scorpion," in which the English correspondent thinks he makes a good showing in the affirmative of the "mooted question, whether animals purposely commit suicide." It is another instance of what a German scientist would call "a fact not very well observed."

The scorpion killed himself, but he did not commit suicide, and the English correspondent doesn't prove what I say. He attacked his "pet" with a botanical lens, biting his prisoner with the "focused rays of the sun," and naturally the scorpion runs away, even hissing (?) and spitting (?) in a very fierce way, which is repeated four or five times, with a like result.

Now, what is more natural for the tortured arachnid than to strike at the object irritating it, pain, and as "focused rays" are not substantial enough, the sting enters its own body unintentionally, which I take to be a rational explanation of the occurrence. Yours truly,

GEO. C. EVANCK.

WONDERFUL LEAP BY A DEER.—An Irish journal gives an account of a tremendous leap taken by a deer belonging to Mr. Gubbins, the master of the Tuglinagh Slaghobh, County Limerick. The master a few mornings since was in the paddock engaged in separating the bucks from the does, when one of the former (his best) quietly walked up to the boundary wall, which is thirteen feet high, and cleared it at a bound. Loth to lose such an animal, Mr. Gubbins decided on hunting him, and accordingly two good hunters and six couple of picked hounds were selected, and laid at once outside the door. They immediately hit the deer, and after a run of two hours the track was safely taken. The jump over the wall was certainly an extraordinary performance. An English red deer stands about four feet high, so that this animal must have cleared more than three times its own height.

Woodland, Lawn and Garden.

PHOSPHATIC FERTILIZERS.

TO one of our correspondents, who asks us for a work on pure fertilizers, we can say that the only book we know of which will give him the desired information, laid down scientifically, is a large and expensive work by Campbell Morfit, chemist and author. London: Tucker & Co. 1873. This book covers the whole ground he seeks information upon. After some considerable study on our part, we can give the following concise, reliable, and practical conclusions of our own, which we believe will embrace the whole subject of his inquiry. We have found in very many works of speculative knowledge that they are to be depended on in the direct ratio only of their truthfulness, not of their apparent theoretical truth. Theory is not always founded on fact, as it should be.

A story is told of Dr. Henslow, when Professor of Botany at Cambridge, that there was brought to him by a farmer a few fossils. He saw at once, being somewhat of a chemist and geologist, that they were not composed as fossils usually are, of carbonate of lime, but of phosphate of lime. He drew in a long aspiration and said:—"You have found a treasure—not a gold mine. This is bone earth, which we are at our wit's end to procure for our grain and pulse, and which we are importing all the distance from Buenos Ayres at considerable expense. Only find a little of this and you will increase the food supply of England immensely."

It is a well known fact in the chemistry of agriculture that every phosphate of lime is not limited to the bones of animals. In the great laboratory of the world we find instances of deposits of the pure phosphates of lime very rare, and then on a small scale. The specimens thus found are only seen in cabinets as curiosities. The highest grades I have ever seen were from Spain and Canada, and were termed assuetes, and contained ninety per cent. of phosphate of lime.

A mineral phosphate, such as is used among our own commercial concentrated manures is made from lime intermingled with chalk, gypsum, silica, manganese, and a crude collection of grosser material, which are reduced to a pulp with sulphuric acid. Of this mass may be made a good, bad, or indifferent phosphate by the addition of bones, feculent matter, road scrapings, manure, and such.

OLLIPHOUT QUILL.

EUCALYPTUS GLOBULOSA.—This tree is a rapid grower, and it attains a gigantic size. It may be seen in St. Jose, California, of a great height. From a letter just received from a friend at that place I make this extract:—"The tree you inquire concerning is what we call the 'blue gum'; what you call it I don't know. It attains the height of sixty feet in six or eight years; it grows like a moss-horn. The leaves are of a gummy, sticky character, and they smell like camphor, very strong. This tree will not stand frost. It has failed to live in Georgia; attempts to cultivate the same having proved abortive. This is given upon the highest authority." If you will call to mind a circumstance that occurred at Washington a few years ago at the Smithsonian Institute, called the "sun flower mania," in which Prof. Maury claimed such wonderful powers for the sun flower, you will find a kindred matter in the *Eucalyptus globosa*. Maury claimed that several misanthropic localities were completely purified and made healthy by growing the sun flower in abundance. Of the value and virtue of the sun flower almost every one knows, while of this new claimant we know but little, and would be the first to advise its propagation could we be assured that it would meet only a few of its claims, which we are sorry to know are fabulous. Florida, the paradise of exotics, will grow this tree, and we have still to regard it as one of the plants whose location and abode must ever be *outré* more for all we can do with it as an embellisher of our cold Western and New England homes. As the FOREST AND STREAM has acquired the reputation of a truth teller, we have given to all who would love this wonderful tree a short notice of a characteristick characteristick characteristick, as far as we have noted, are correct and truthful, and may be strictly relied upon. We shall at another time give an article in greater detail on this wonderful tree, and we doubt not our friends and readers will be amused and instructed by it.

OLLIPHOUT QUILL.

WESTERN AGRICULTURAL LIFE.—What can be pleasanter, says an exchange, than the life of a Western farmer? At daylight he gets up and examines the holes around his corn hills for cut worms, and then he smashes them with corn larva with a hoe handle until breakfast. The forenoon is devoted to watering the potato bugs with a solution of Paris green, and after dinner all hands turn out to pour boiling water on the chinch bugs in the corn and wheat fields. In the evening a favorite occupation is adjudging peach trees to discourage the curculion, and after a brief season of family devotion, the shining of the night flying coleoptera, all folks retire and sleep soundly till aurora reddens the East and the grasshoppers tinkle against the panes and summon them to the labors of another day. Eternal vigilance is the farmer's motto, and our Western friends should add to their morning exercises a few barrels of several good fertilizers, in small quantities, and these pests, however troublesome, will entirely disappear. We have been making some careful experiments with six or seven fertilizers for quite a number of years, and with the very best success. From our experiments we know our Western farmers can find relief from too violent excretion, provided they will use the simple remedies we propose.

ANSWERS TO CORRESPONDENTS.

H. P. E. Jersey City Heights.—In answer to your inquiry of December 14th, I would say that the minute scale upon the leaf you sent are the skeletons of the scale insect, a common parasite of the apple tree. They were doubtless alive when you sent them, but had died on their way to me. An examination with the microscope gives them the definition above, and they can be easily exterminated by the use of pretty warm soap and water. Remove your pot to a place where you can water the leaves and stem of the ivy with a fine rose jet garden syringe, and replace it in a sunny place. Do not plant in good garden soil; repeat twice a year. Use a ten inch pot, with a drainage hole in the bottom. Do not plant in a shallow one, even in ten days, and then give the ivy water somewhat warm. The ammonia you speak of is well; use it once a

month. A better material is carbolic water, weak, and Gould's fertilizer, quarter of a pound to four quarts water, gives you just what you need. Do not use alcohol in any form about your plants.

ANTHONY GIBCO, Ill.—To your question as to commercial fertilizers, we will say: The State Board of Agriculture of Massachusetts has issued a circular to manufacturers, importers and dealers in all kinds of commercial fertilizers calling explicit attention to the act passed by the late Legislature, chapter 306, which requires every fertilizer offered for sale to be accompanied with a printed analysis, and that every manufacturer or importer shall take out a license before presuming to sell the article, paying annually the sum of \$50 therefor, and to file with the Board a paper stating the names of his principal agents, and also the name and composition of such fertilizers. Persons failing to comply with the above conditions will be fined \$50 for the first offence, and \$100 for each omission thereafter committed. This is a necessary protection for all farmers who are desirous of using a good reliable fertilizer. So many humbugs are thrown upon the market, with so many wonderful names, and whose effects, as claimed, are extraordinary and beyond not only precedent, but so utterly devoid of truth, that we are happy to inform all readers of the FOREST AND STREAM that all reasonable information of those fertilizers which we know to be reliable from actual experimental use only, will be mentioned in this paper. We have used numerous fertilizers for the past fourteen years, and know whereof we speak. Some are good and reliable—others are good for nothing, utterly worthless.

WALTER EVERETT, Ohio.—Will grow the thorn well, of the kind sent as a specimen. For full directions and management of a hedge made of this kind, I refer you to one of the earlier numbers of FOREST AND STREAM. The twig you sent is one of eleven species of hawthorn, and is the *Argemone Crataegus*; or common hawthorn. Has a hardy, robust trunk, branching from the bottom upwards; grows ten to fifteen feet high, armed with thorns; obtuse, tripart, with serrated leaves, and white flowers in numerous clusters from the sides, and ends of the branches. The seed is in bunches, bright red berries, and are called haws. It is the least beautiful of the ten other kinds.

OLLIVION QUILL.

The Kennel.

COMFORT FOR DOGS.

WE have had occasion from time to time to refer to the negligence of railroads in providing such accommodations for hunting dogs as would enable them to have comfortable quarters and to be fed and watered in a proper manner. The only road in the country that makes any provision for such animals, as far as we can learn, is the Missouri, Kansas and Texas Railroad, and the fact that all its directors and agents are lovers of manly pastimes is probably one great reason why it stands so pre eminent over all others in this matter. We should very much like to be able to extend this compliment to all attaches of railway lines, for we should then expect them to have some consideration for sportsmen, and provide some means of having their dogs properly attended to.

To the greater number of railroad employees, a gentleman traveling over their route in quest of hunting fluids is looked upon as a nuisance to be tolerated only because there is no law to prevent his assuming a place among other mortals; but his dogs, if he has any, are looked upon as vile creatures that ought to be starved, placed in the vilest cranny of a baggage car, kicked about and maltreated generally, as if their presence were odious, and the taking of their life by torture a duty. No matter how valuable the animal may be, he is left uncared for, unless his owner attends to him, or hires a man to do it. This general maltreatment of highly prized dogs shows that the greater number of railway companies have little respect for gentlemen interested in field sports, or at least, if they have, that it ceases when the latter enter the cars.

This is a serious wrong which should be rectified; and it can be if gentlemen will only insist on their rights, as they do in England, France and Germany. Valuable dogs represent a certain amount of money, and as money is property, it must follow that dogs are also property, and that any injury done to them by the negligence of railroad employees, under whose care they may be placed, ought to be as liable to punishment as the injury done to any other species of property.

To this general assertion of negligence we except the gentlemen connected with the above mentioned railroad, for we know by experience that they pay sportsmen the most assiduous attentions, and treat their dogs in the most considerate manner. Every gentleman passing over their route to enjoy himself among the game birds and animals that are so dense in the country through which it passes, receives those kindnesses and courtesies that make traveling so pleasant.

Indeed, the fact that a gentleman is also a sportsman, causes him to become the centre of attraction to the employees. This is such an exceptional case that we feel it our duty to call attention to the fact, so that the managers of other roads may be made aware of how much their kindness, humanity and genial courtesy are appreciated by all sportsmen who have come in contact with them. If other railroad magnates would follow their lead they would endear themselves more to the public, and materially increase their revenue.

—Dr. Twaddle, of Philadelphia, has a Dachshund of imported stock, and has made arrangements to procure others.

—Twenty-four greyhounds of choice breeds were recently sold in England for upward of \$7,650.

CARING FOR DOGS.

"Caractacus," a very prominent English writer on dogs, gives the following advice in the *Fancier's Gazette* as to the proper mode of feeding and cleaning these animals:—

Taking first the matter of food, it will be well to bear in mind that the dog is what may be termed a compound animal—that is to say, he will not only exist and thrive in the very extremes of climate, but will eat and flourish on either animal or vegetable food, singly or combined, either in a crude state or cooked; it may therefore be accepted as a rule, that the nature of animal and vegetable food will be found more conducive to health than an entire diet of either the one or the other. Then again, change of food will in most cases be found advantageous. Some dogs of a high nervous temperament require very careful treatment in order to put on flesh, and will consequently require greater indulgence in the choice of food than an animal of coarser build, and in some cases it will even be necessary to resort to tonics. Very poor feeders may be got into condition by means of cod liver oil, the daily dose depending chiefly on the size of the patient; a tablespoonful will not be too much for a St. Bernard or a mastiff, while half a teaspoonful will be found sufficient for a small terrier. Another capital flesh maker is crushed linseed, which should be as fresh as it possibly can be obtained; a handful boiled up with the daily stir-about, or soup, to mix with the biscuits will, in many cases, be found very advantageous. We have always found dog biscuits of great assistance as a change of food, sometimes given hard and sometimes soaked; when soaked they require mixing with the soup in which flesh has been boiled, milk, or Liebig's Meat extract. This latter we have been using of late with wonderful effects, and as it may now be obtained at trifling cost it is well worth the attention of those who desire to get their dogs quickly into form, as it is undeniably wholesome and possesses the additional attraction of being easily prepared; all that is necessary is to mix an ounce or an ounce and a half of the extract in a quart of hot water. Milk should only be used with very young puppies, and then it must be boiled, as otherwise it is almost certain to breed worms. After all, there is nothing that will condition dogs so quickly as scraps from the table, if you only have sufficient; the quantity of food a dog requires much depends on the size and habit of the individual, and the amount of exercise he receives, that no rule can be laid down; but, generally speaking, unless a dog is a very gross feeder—in which case very little meat should be given—it will be found best to give but two feeds a day of as much as he will eat.

We next come to exercise, which not only tends to keep in health, but brings out that muscular development which is so greatly admired in every variety; indeed, in some classes, it forms a most important feature; and a bull terrier or a greyhound, however good otherwise, would stand little chance with most judges if such were deficient. It is an easy matter to get muscle on a bull terrier; they are so courageous, so enduring, so hardy, and so full of life; various means may be employed, and so long as he gets the exercise, matters little how it is done.

Dogs that are regularly supplied with plenty of good, dry, clean, wheat straw, will require but little washing, especially if they are in the habit of taking an occasional swim. When, however, a tub is necessary, avoid ordinary soap, as it destroys all natural gloss and has the effect of making the coat look dull, besides which there is always a slight portion of the soap left on, however carefully he may be rinsed, which holds the dirt afterwards like a cat's paw. Em-alive powder holds dirt. The various carbolic soaps are far superior. We have tried most of them, and give the preference to Brown's, which undoubtedly improves the gloss, keeps the skin sweet, destroys the parasites, and cures surfeit and slight cases of mange. Large, smooth-haired dogs will be much benefited by a constant use of the flesh brush, and sand rubbing afterwards. When the coat is rough and coarse it will be improved by the constant wearing of a thick jacket, similar to a greyhound sheet. Small doses of arsenic are sometimes used, but this should only be practical under direction of a medical man, or one who has had considerable experience. Another plan, which is almost as good and perfectly harmless, is to give a ball of common tar and oatmeal every day for a week, the quantity to be regulated by the size of the dog, a ball the size of a large walnut for a pointer, two for a mastiff, and one for a terrier.

The tails of terriers are occasionally too plentifully furnished with hair, especially on the under side, and when such is the case it is generally fined down by means of a little powdered resin taken in the hands, through which the tail is quickly and repeatedly drawn. Thus far we think it only fair and right that exhibitors should bring their favorites up, showing to the best advantage, but there are dogies resorted to in "getting dogs up," which cannot be too severely condemned. The most common of these are the faking of the ears of dogs that are supposed not to be cut, trimmed, or otherwise manipulated; cutting the strings in the upper lip of bull dogs, in order to shorten the face; or making "stage" wrinkles by means of a lead pencil; painting or staining the coat; curling with hair tongs the hair of retrievers and many other contrivances, when cleverly done, are so difficult of detection that it is perhaps best not to mention them at all.

MORE VALUABLE IMPORTED DOGS.

We take the liberty of publishing the following private letter, as it contains information that will interest our readers. As soon as "Rock" arrives in America we shall give his description and pedigree:—

Boston, December 23, 1874.

I see you gave the pedigree of Mr. Smith's Dart, and my friend Luther Adams, Esq., has imported her dam, Dora, a very beautiful bitch, one of the very best dogs in England, and quite celebrated as a winner there. From Mr. Buckner's description of him—whom Mr. Adams has just been reading to me, in a letter announcing his shipment—he will be worth a long journey to see. Buckner expresses a wish that some of your New York sportsmen may see him, and speaks of his head as very noble, and altogether I believe him to be the best dog yet imported. Mr. Adams is a man of good judgment, and imports solely for his own gratification and use; but if you think it will be any gratification to you, or to some of your friends, I will try to send you the pedigree of both Dora and Rock; which are first-class, and doubtless Mr. Adams will be pleased to show the dogs to any gentlemen visiting Boston.

W. H. C.

Sea and River Fishing.

FISH IN SEASON IN JANUARY.

Pompano. Snapper. Grouper. Rockfish.	SOUTHERN WATERS. Trout (black sea-). Drum (two species). Kingsfish. Striped Bass.	Sheep-head. Tallfish. Sea Bass.

FISH IN MARKET.—Shad are now becoming quite plentiful, so retail at forty-five cents each. Halibut is so scarce that the market cannot be supplied, hence it brings twenty cents per pound. Smelts are coming in most profusely and bring only ten cents per pound. Bluefish and kingfish are limited in number. Blackfish are rather common and retail at the usual price. Codfish bring from eight to ten cents per pound; lobsters ten cents and hard shell crabs in good condition, are worth \$3 per 100.

—At New Bedford and New London King Kalakaua found many personal acquaintances in the ship captains and old whalers who crowded in to shake hands with him.

—Philadelphia is the great catfish market of the country. There is a party at Deep Landing, Prince Frederick county, Maryland, who has a pond capable of holding 8,000 bushels of these fish, which he catches and keeps therein for market.

WINTER FISHING.—Employment is being provided this winter for a good many in this county and Gloucester by Mr. Edmund S. Tozer, of Newcastle, who is going largely into the frozen fish business. Bass, eels and trout are taken through the ice and shipped in a frozen state to the American market. The bass are taken by being dipped with nets out of large holes made through the ice, the eels are taken out of their winter quarters in the mud by iron spears, and the trout are caught with the hook and line. *Chatham (V. B.) Advance.*

The following summary of the loss of Gloucester fishing craft and men during the fishing season of 1874 is given by the *Opportune Advertiser*. During the year there have been sixty-eight lives and ten vessels lost, against 174 lives and thirty-one vessels in 1873. Of the ten vessels lost last year the crews of seven were saved. The heaviest losses have been in the Grand and Western Bank fisheries, sixty-three lives and five vessels having been lost in their prosecution. For the first time in ten years the Georges fishery has been pursued without the loss of a vessel, and but two lives have been sacrificed. One vessel was lost in the Bay of St. Lawrence; two employed in the Newfoundland herring fishery; one vessel and three lives in the shore fishery and one vessel in the menhaden fishery. The total tonnage of the ten vessels lost was 63,217 tons; their value, \$19,100; insurance, \$41,375; insurance on outfits, \$3,000. Of the sixty-eight men lost, eighteen were known to be married, leaving eighteen widows and thirty-seven children.

—For several months four exquisite photographs of large size, illustrating the history of a Salmon, have hung upon our sanctum walls, keeping constantly in remembrance those past familiar experiences to which these bear the marvellous resemblance. Often in the intervals of office labor we have gazed upon them with the earnest and eager longing of a salmon angler, tempted, but deterred from sport; but we have found their influence rather soothing than otherwise, not breeding discontent or rendering irksome the hours of editorial duty. The freshness and freedom of the wildwood had been brought into our presence, and we were rendered happy by reason of sylvan pleasures already vouchsafed to us, instead of dissatisfied because circumstances prevented their immediate enjoyment.

These photographs are transcripts of those remarkable oil paintings by Walter M. Brackett, Esq., the Boston artist, which were sold in London last Spring at a magnificent price—\$5,000, we believe. Still, we have always felt that they were not sufficiently appreciated, even by the enthusiastic connoisseur who became their possessor; at least, no newspaper criticism that we ever saw, here or abroad, has ever done them full justice. The realities that are developed on the canvas seem to lie beyond the scope and conception of the merely dispassionate art critic or cold anatomist. Exactly wherein the pictures are truthful, none but the practical angler can perceive or understand; just as there are certain intelligences in the babe that a mother alone can discover and be conscious of. To the man who has thumbed these rough pages of nature every year until they have become perfectly familiar, there is not only an inner consciousness of marvellous accuracy in every detail of situation, color, shade, anatomy, and contingency, but each hour's study brings some new development that assures, surprises, and delights. Of course, these photographs lack the dramatic force and vivacious sparkle which colors give them; nevertheless, shut out from mental view all other objects, let but these absorb the thoughts, and it is easy enough to fancy oneself beside the salmon pool before us, carefully studying every vantage ground of approach and attack, choosing a strategic base of operations, and devising the most subtle artifices to lure the monarch from the secret depths below. Directly in front is a long stretch of river, with a big projecting rock in the immediate foreground, so near, in fact, that we are to imagine ourselves standing on it, and we can see the moss that clings to it in place; wet and glistening with the spray and dampness of the river. Away up above is a cascade, whose tumbling foam presently subsides into a glassy, eddying surface that indicates both depth and strength of current, and then pouring through a contracted channel between two ledges, flows past our feet with a full translucent volume and a marked descent that suggests approach to a rapid below. At the lower edge of our rock is a sharp cut ripple, and then a little eddy that circles into still water at its base. It is just at this spot where a salmon would be likely to rest after surmounting the rapid that we detect

the trailing fly of the unseen angler, with its silvery snood of gut, and mark the rising of the victim to the surface. On the opposite shore the river is thrown into gloom by the black shadow of overhanging woods and rocks, and the distance which the shadows fall indicates the hour that is most auspicious for the angler. And we all the concentrated experiences of a dozen lives, and the intuitive perception of the most wily mentor, we could not have made a more judicious cast. We feel that we would have selected the self-same spot that the artist has chosen for his test.

Just here, we may surmise, the history of our salmon begins. It is not every life, by any means, whether of man, animal, or fish, that has a history; for many lives are mere blanks of existence, and might as well not have been. Events, or their recurrence, make history; hence it may frequently happen, as in the case of this salmon, that the history of a life is condensed and crowded into a few brief chapters. It is not at all probable that he ever experienced any striking event before, and the incidents herewith portrayed were to him, no doubt, a great surprise. This is chapter I. of the series, entitled "The Rise."

We can see now how genius can animate canvas, and breathe the breath of life into ground pigments. From our point of observation we may note each motion of the fish, the play of muscular forces, and the mechanical action of fins and tail, that enable him to breast the impetuous current and rise to the surface—a noble fish in full vigor of maturity, flashing with silvery coat of mail, round, and finely built in every part. He comes not with furious headlong rush to seize the fly, and hook himself, like some insensate idiot; but having duly considered the character of the trailing object and formed his opinion, he inflates his lungs and with steady eye and impulsive sweep of tail deliberately rises and takes the lure gently as one sips kisses from the lips of love. Presto! Quick as thought comes the sharp sting; of the hook as the quick angler strikes it home; feeling which he instantly dashes into the depths of the stream, more surprised than frightened, yes, more indignant at the imposition than moved by actual pain. When he has run off a hundred yards or more, he feels his momentum unaccountably checked, and giving three or four nervous jerks of his head to test the nature of the impediment, he realizes for the first time that he is no longer his own free will agent. For the first time he becomes thoroughly alarmed, though by no means daunted. With desperate determination to break away, fight adding strength to energy, he rushes madly hither and yon—now darting the whole length of the sluggish pool, now seeking the surges of the lower rapid, dashing among the boulders of the mid stream with many a twist and turn, rubbing his nose against the gravelly bottom to get rid of his strange tormentor, until finally, as a last resource, he breaks for the surface, and with one mighty effort leaps four feet clear of the water! This brings us to the second painting of the series, designated "The Leap."

All these maneuvers have consumed time and compelled numerous counteractive expedients on the part of the angler, and we accordingly find the relative positions of the combatants materially changed in the picture. The fisherman has evidently yielded a point, for we find him further down the stream, with new features added to the landscape. We cannot see him, but the glittering gut-length that holds the fish shows the exquisite skill with which he handled his victim. For the first time we discover where the salmon is hooked, and find that the barb has but a slight hold in the edge of his upper jaw. We wonder that he has not already freed himself. Again we are called upon to remark the rare genius of the artist, who has thrown into the eye of the fish an expression indicative of mental emotion—a dilation and brilliancy of the pupil that accurately reflect the situation in the drama. One would hardly expect the vacuous eye of a fish to speak so feelingly! The continued exertions of the salmon of course tell visibly upon his strength. We can determine inferentially the time that has been consumed in the contest when we turn to the third act in the drama, "The Struggle."

The angler now has his victim well in hand. Gradually he has brought him under control. Inch by inch every foot of the one hundred fathom line has been contested. Slowly but surely the revolving reel has shortened it to a few yards, until at last, with the but of the rod turned toward him, to give increasing strain, the brave fish comes in sideways, curved nearly double with a mighty spasmodic resistance, head and shoulders out of water, jaws agape, and eyes rolling in a frenzy of torture and despair. In this picture the anatomy of the fish seems perfect, showing great muscular development and nervous tension. We have heard an eminent naturalist say that the opercula, or gill covers, are a trifle too small; but we prefer to waive the criticism, though willing to take it at its value. The success of the portrayal to us seems marvelous. It might be inferred that after the struggle came victory; but in salmon fishing victory is never assured so long as the salmon can wave his tail, more powerful in his death throes than in life; the relative positions of the actors in the last picture of the series show that the contest must have been some prolonged thereafter. The end comes at last, and when we look again we find the doggy warrior "Landed," lying stiff in death upon the green sward of a gentle slope far down the stream, in all his magnificent proportions, with the implements of the angler's craft, the gaff and rod, beside him. He has yielded his life, and his history is written. Far up the river, in the distant perspective, we can just discern the sparkling waters of the cascade; midway

is the fatal rock where the fish was hooked, and the space that intervenes tells plainly of the protracted battle. The harmony of scene and event are everywhere faithfully preserved and carried out, and the praise awarded to the artist has doubtless found grateful response in his own consciousness of success.

We have chosen to call attention to paintings so long ago exhibited, because the artist has now nearly completed duplicates of the same, having undertaken the task by generous permission of the owner of the originals. They will probably be on exhibition some time next February. Photographs, 7x5 inches, can be obtained at his studio, 41 Tremont street, Boston, and at 48 Maiden Lane, Andrew Clerk & Co., city.

PROTEST AGAINST SPEARING FISH.

New York, December 28, 1871.

EDITOR FOREST AND STREAM:—

I feel sure of a place in your columns for a lamentation I am forced to visit to Theresa, Jeff county, in this State. And I am equally sure of your sympathy, if you have ever had an exciting boat with a large maselance (*Esca edor*) at the end of eighteen feet of line, without a reel, attached to a natural rod of true-tapering, springy hemlock of same length. "This magnificent fish, which is the finest, largest, and most excellent food of all the pike family, is the boldest, fiercest, and most voracious of fresh water fish." These are the words of Henry William Herbert, whose drawing, from nature, on wood, in Frank Forester's "Fish and Fishing," is the most correct and life-like picture of the maselance ever published. Indian River rises in our great Northern wilderness, and discharges itself into the St. Lawrence by Black Lake and the Oswegatchie River. That portion of the stream—say twenty miles—between the falls at Theresa and the rapids, and two lovely lakes connected with it, have been the best waters within my knowledge for sport with this fish; and would be now, were it not for the illegal spearing, which the profligate sporting residents neglect to suppress. And here comes in my Jeremiah. I am told that few maselance were taken with rod and line last season, and that their number is evidently diminishing, for the disgraceful reason mentioned, and for the illegal legislation by Raymond, W. D. Chapman, Joseph Fayol, Charles Fiske, Ambrose Walrad, George E. Yost, and other well known anglers, to exert themselves to prevent the extinction by such murderous practices, in violation of law, of this noble pike, whose zany and able qualities used to attract so many visitors to Indian River from far and near. The last named is member elect of our Assembly, and if the illegal legislation is enacted will, I am confident, be able to procure it. He will find a hearty coadjutor in Gen. Richard V. Sherman, of Oneida county, who will be one of the most useful and influential members of the House, and who numbers among his pleasantest fishing experiences a trip, years ago, down Indian River.

H. H. THOMPSON.

CATCHING A SEAL.

ANDOVER, MASS., December, 1874.

EDITOR FOREST AND STREAM:—

I succeeded, with the assistance of Jerry Bunker, in capturing a live seal the other day. The circumstances were as follows: We were out sailing in the bay, and when near the seal rocks off Old Orchard Beach, a large number of seal were discovered upon a "sand spit" not far from the main land. It is particularly amusing to see them flop into the water when a boat approaches them. As we were bent wholly upon pleasure, we sailed around the spit, and let the men haul in the net, which they commenced their scurrying, and such a churning of the water occurred, that would have done credit to a regiment of demoralized soldiers fording a stream, with the enemy in hot pursuit. After all, as we had supposed, were well off the spit, we discovered one asleep upon the top of the spit, and about twenty feet from the water. The skipper, quick as thought, turned the direction of the boat to the spit, which, on the west side was quite steep, and the moment the bow struck the sand he jumped ashore, at the same time shouting to me to, "let the sheet go and let her remain where she is." I did so, the wind keeping the boat in that position. All this was the work of a moment, and looking up I observed the skipper beckoning to me to follow, which I did quickly, and reached the spot just in season to see the surprise when the seal was water. Immediately upon his waking up, he gave a spring for the water, but Skipper Bunker was too quick for him, and grabbed him by his rear flippers; then a severe tussle ensued, which took the united efforts of both to cause him to yield. Some twenty minutes was occupied in the capture; the tide flowing in upon us very rapidly, so much so, that we came very near having to abandon the job, or at least make a self help. I must tell you that our first attempt was unsuccessful in getting our prize into the boat. The reason was, he crashed the boat's painter close to the bow of the boat, and commenced writhing and taring over and over with such rapidity that we thought he would gain his liberty; but Skipper Bunker, getting tired of holding such a weighty mass (100 lbs.), and changing hands, as he was forced to do, jumped on the painter, and with the help of so lucky for us, he let go his hold of the painter, and the next time we took the precaution and got a couple of half bites upon his flippers, and were a little more careful in handling him when we put him into the boat. We secured him safely in the cuddy of the boat where he was allowed the choice of berths. In the meantime while all this was going on, the numerous seals were showing their heads in all directions, and looked like so many human beings that had been witnessing the capture. We returned quite brave with our prize to the pool.

Answers To Correspondents.

We positively answer no more questions through our Correspondent's column from anonymous writers.

GAZETTE.—For maps of Florida address Columbus Drew, Jacksonville. J. E. S., Philadelphia.—See answer to "Frank" this week. Will give your queries special attention in our next.

FLINT LOCK.—The United States will not sell serviceable arms except to army officers.

PICKETON, Carbondale.—We understand the picketer of the Provinces, so designated, to be our well-known pike, *leucopercus*, while our picketer are there denominated pike.

BARNES.—Will you please inform me if there is a law in Suffolk, Kings, or Queens counties after the 1st of Jan. for rabbits? (Ans. No law as to rabbits and squirrels at the season.)

FRANK.—Can you give me the name and address of the owner of the Deer Creek, New York pointer that was exhibited and took first premium at the Queens County Fair? (Ans. Jotham Smith, of this city.)

W. P., Brooklyn.—Please tell me of a good dog on zoology, where I can get it and the price? (Ans. Wood's is a rather good one. Price about \$15; three volumes.)

J. V. S.—Would you please inform me, in your next edition whether quail and wild turkeys would thrive in Pike county, Penn., and also what time they should be turned out? (Ans. Experiment has been tried. Too much snow and too high a price.)

D. W. H., Belmont, Mass.—Will you be kind enough to give me a receipt for making the percussion or fulminate with which rim fire metallic cartridges are primed, and the manner of loading them and oblige! (Ans. A trade secret.)

CANYON BACK.—Can you give me the name of any person living on Back or Gunpowder Rivers, Md., that I can correspond with, relative to running shore on either of these rivers for duck shooting? Would prefer the Gunpowder River. (Ans. Write to Joseph T. Bailey, Esq., corner of Twelfth and Chestnut streets, Philadelphia.)

E. E., Wehrum, Mass.—I saw article in December 17th issue on andered dog. Can you give me any testimony if you would like to chat. Would like to hear from you. 2. My dog has got bound up, have given him four pills at a dose, but does no good. Please prescribe. Dog cross between a hound and terrier, two years old, light weight? (Ans. Injection of castile soap aids.)

I. V. P., Catskill.—Will you please inform me, through the columns of your valuable paper, the best remedy for its in young dogs? (Ans. Of late years the most popular remedy has been bromide of potassium. Give three grains twice a day for a week. Send us the result of the experiment at the end of a week's trial.)

G. W. G., Hartford.—Please let me know where I can get wild pigeons for trap shooting, and price per hundred? (Ans. Cannot get any wild pigeons in this region of country at present, nor do dealers know where they can be found. However, write to P. N. Walker, Deer Park, Garret County, Md.)

Dr. T. J. C., Ky.—Could such an article as green elastic varnish, or liquid India rubber, in its natural state, be obtained in New York? I want something of the kind for my roads. The enamel is so hard and polished that it is impossible to get any kind of varnish to stick. (Ans. D. Hodgman & Co., 37 Maiden Lane, New York City, have a black elastic varnish, which we believe will answer your purpose. Dr. Starr, of Mt. Vernon, N. Y., is about manufacturing a similar composition. Ordinary paper prepared with it has held kerosene oil for a year.)

P. D., Greensburg, Penn.—Will you please inform me, through your paper, when, in season, I can find the best trout fishing, either in Jefferson, Elk, or Forest counties, in this State? (Ans. Trout, Straight, and Clarion Creeks, in Elk county. No trout fishing in Forest county, excepting in the extreme eastern portion, and there confined to small runs flowing into the upper Tonawanda. The southwestern portion of Forest county is a portion of the mountain belt, and trout fishing is confined to the creeks flowing into the Clarion River in the northern part of Jefferson county. Of these the counties we would prefer Elk.)

NO NAME, Syracuse.—1. Which is the best size boat to be used as a row and sail boat, if needed? (Ans. Eighteen feet. 2. Would one of the Thousand Islands boats 21 feet long, 3 feet wide, pointed at both ends, be safe for sailing? (Ans. Yes, if properly handled. 3. What is the price of the makers of the Thousand Islands boats, and what is the price of them? (Ans. J. W. Swell & Co., 153 South Street, splendid boats for sail or row. 4. What does a steamer 25 to 30 feet long cost, and is there much chance of buying them cheap, second hand; also please give me the name of such builders? (Ans. Cost of steamer from \$1,300 to \$1,500—second-hand steam yachts of that size seldom in the market. Write to New York Safety Steam Power Co. for any information wanted in detail.)

FRANK, East Liverpool, Ohio.—My setter dog lately had the distemper—in fact is hardly over it yet, and what troubles me most, is that he has almost gone blind. He is thirteen months old. You will greatly oblige by informing me of a cure? The diagnosis of your dog's complaint is too imperfect for us to give the advice we would desire. If he has suffered with fits during distemper, partly of the optic nerve, no doubt, is at present curing blindness. Partial blindness may be cured for a time by improper treatment in distemper. If the dog has had convulsions and the blindness followed, a seton under the skin on the poll, moved every morning will do good. We should like to know more in regard to the condition of the seton during distemper, and the symptoms, that we may know if it be distemper.

P. B. P., Paris, Ontario.—1. What material and the best color for the same would you recommend for a durable shooting coat, and what style of cut would be the most correct? (Ans. General the general rule is to use a coat of cut, lined with gun, loaded with 3 or 4 (say 4) drachms of powder and 12 oz. of No. 8 shot, put into a thirty inch circle, and what would be considered good penetration for the same? (Ans. Oak tanned (color of dead leaves) for Autumn, and dark green for earlier season. Short skirt, numerous and ample pockets. 2. As each barrel in a gun shoots differently, by a general rule, we can give you the general size of shot. From 160 to 200 grains would be a fair average. The penetration would of course depend much on the distance from which the gun is fired. At forty yards, a penetration of thirty five pieces of the usual test paper is done, it's good work.)

W. G. D., Davenport, Iowa.—In the number of the FOREST AND STREAM for November 19, page 223 is a communication from Seth Green, in which are enumerated the following varieties of the bass family, viz: Oswego bass, strawberry bass, green bass, blue bass, and black bass. Now, the former of these, in its locality, is like the latter, and the latter is like the former. We have a bass that differs from the black bass, though closely allied to it in many respects. Among our anglers who have noted the difference, they are known as green bass, or slough bass, and by some called grass bass. We take these green bass with the minnow and fly in the same locality with the black bass; they frequently spring out of the water when the black bass, and act in the same manner. From 160 to 200 grains would be a fair average. The penetration would of course depend much on the distance from which the gun is fired. At forty yards, a penetration of thirty five pieces of the usual test paper is done, it's good work.)

SMITH.

CANOVICH, Belmont, Minn.—1. What are the heaviest breech load gun shot, and who are the makers? 2. What breech loading gun you recommend for ladies use—small caliber, light weight, accurate in shooting, and simplicity of mechanism are indispensable? 3. Are deer claws on setter puppets signs of inferior blood? Do you advise their removal from young puppies? 4. Can you, or any of our correspondents, give a receipt for dog biscuits? At the West we are so far from the sources of supply that it would be economical and convenient to make our own. 5. As does ever used in capturing elk or moose? 6. What pocket compass and you recommend as durable, convenient to carry, and reliable? 7. Will you express an opinion regarding the \$10 Creedmore target pistol or rifle, advertised in your last number? (Ans. 1. Breech loading shot-guns can be ordered of any weight desired, from first-class manufacturers; but few can be found ready made heavier than 12 to 15 pounds. 2. As does ever used in capturing elk or moose? 6. What pocket compass and you recommend as durable, convenient to carry, and reliable? 7. Will you express an opinion regarding the \$10 Creedmore target pistol or rifle, advertised in your last number? (Ans. 1. Breech loading shot-guns can be ordered of any weight desired, from first-class manufacturers; but few can be found ready made heavier than 12 to 15 pounds. 2. As does ever used in capturing elk or moose? 6. What pocket compass and you recommend as durable, convenient to carry, and reliable? 7. Will you express an opinion regarding the \$10 Creedmore target pistol or rifle, advertised in your last number? (Ans. 1. Breech loading shot-guns can be ordered of any weight desired, from first-class manufacturers; but few can be found ready made heavier than 12 to 15 pounds. 2. As does ever used in capturing elk or moose? 6. What pocket compass and you recommend as durable, convenient to carry, and reliable? 7. Will you express an opinion regarding the \$10 Creedmore target pistol or rifle, advertised in your last number? (Ans. 1. Breech loading shot-guns can be ordered of any weight desired, from first-class manufacturers; but few can be found ready made heavier than 12 to 15 pounds. 2. As does ever used in capturing elk or moose? 6. What pocket compass and you recommend as durable, convenient to carry, and reliable? 7. Will you express an opinion regarding the \$10 Creedmore target pistol or rifle, advertised in your last number? (Ans. 1. Breech loading shot-guns can be ordered of any weight desired, from first-class manufacturers; but few can be found ready made heavier than 12 to 15 pounds. 2. As does ever used in capturing elk or moose? 6. What pocket compass and you recommend as durable, convenient to carry, and reliable? 7. Will you express an opinion regarding the \$10 Creedmore target pistol or rifle, advertised in your last number? (Ans. 1. Breech loading shot-guns can be ordered of any weight desired, from first-class manufacturers; but few can be found ready made heavier than 12 to 15 pounds. 2. As does ever used in capturing elk or moose? 6. What pocket compass and you recommend as durable, convenient to carry, and reliable? 7. Will you express an opinion regarding the \$10 Creedmore target pistol or rifle, advertised in your last number? (Ans. 1. Breech loading shot-guns can be ordered of any weight desired, from first-class manufacturers; but few can be found ready made heavier than 12 to 15 pounds. 2. As does ever used in capturing elk or moose? 6. What pocket compass and you recommend as durable, convenient to carry, and reliable? 7. NEW YORK, THURSDAY, JANUARY 7, 1875.

To Correspondents.

All communications whatever, whether relating to business or literary correspondence, must be addressed to THE FOREST AND STREAM PUBLISHING COMPANY. Personal or private letters of course excepted. All communications intended for publication must be accompanied with real name, as a guaranty of good faith. Names will not be published if objection be made. No anonymous contributions will be regarded.

Articles relating to any topic within the scope of this paper are solicited. We cannot promise to return rejected manuscripts.

Secretaries of Clubs and Associations are urged to favor us with brief notes of their movements and transactions, as it is the aim of this paper to become a medium of useful and reliable information between gentlemen sportsmen from one end of the country to the other; and they will find our columns a desirable medium for advertising announcements.

The Publishers of FOREST AND STREAM aim to merit and secure the patronage and continuance of that portion of the community whose refined intelligence enables them to properly appreciate and enjoy all that is beautiful in Nature. It will wander to no depraved tastes, nor pervert the legitimate sports of land and water to those base uses which always tend to make them unpopular with the virtuous and good. No advertisement or business notice of an immoral character will be received on any terms; and nothing will be admitted to any department of the paper that may not be read with propriety in the home circle.

We cannot be responsible for the dereliction of the mail service, if money remitted to us is lost.

Advertisements should be sent in by Saturday of each week, if possible.

CHARLES HALLOCK, Managing Editor.

WILLIAM C. HARRIS, Business Manager.

THE "BIG HUNT."

COL. WM. C. MCARTY, of Texas, has been in this city for several days completing his arrangements for the Great Western Hunting Expedition that has been announced for the coming season. He is at the Fifth Avenue Hotel. We have several communications upon this subject which we shall print, as soon as we obtain from the Colonel a detailed statement of his plans and program, and we shall be pleased to give him a fair field an full opportunity to combat the strictures of our correspondents who have written down the enterprise. We are somewhat surprised to learn how complete his preliminary arrangements are, and how much he has accomplished. He has written contracts with all steam lines, railroads, hotels, wagoners, escort, &c., from Glasgow, Scotland, to California, and endorsements of his scheme from high and intelligent authority.

FINE STOCK.—Mr. M. M. Barker, our Western representative, in acknowledging the courtesies extended him by the big-hearted sportsmen of the region he has visited, refers to a pleasant visit to the "Highland Stock Farm" of Mr. L. W. Towne, at Clarence, Shelby Co., Missouri. Mr. Towne has a herd of about forty head of short horns, many of them of the celebrated "Princess" stock. He has several imported bulls, and his cows are deep milkers, whose pedigrees are recorded in the American Herd Books. He has thirty Berkshire sows, which he is breeding to imported boars. Such enterprise in improving the stock of the country is most creditable. In due time he will, we presume, announce a sale, when parties wishing any of his cattle or hogs can obtain them.

NEW ARCTIC EXPEDITION.—The steamer Bloodhound, a Newfoundland sealing steamer has been purchased by the British Government for the new Arctic expedition to be sent out next May, via Baffin's Bay, under Captain Markham and Sir L. McClintock. The Bloodhound is one of the best of the steam sealing fleet. She was built two years since, and is admirably fitted for encountering ice. The plan is to station one steamer within Baffin's Bay as a reserve, and push on with the other as far north as possible; then by sleigh parties to endeavor to reach the North Pole. It is said the Bloodhound is to have the post of honor, and will carry the adventurers to the extreme northern point.

OUR RIFLE CLUBS.

THE city of New York and its suburbs have now four well organized rifle clubs. The largest and oldest of these is the National Rifle Association, which has a membership of about 1,400. This is the parent club, and under its fostering care the others have been nurtured into active life.

The second is the Amateur Club, one thoroughly known throughout this Continent as well as Europe, for to it we are indebted for the victory which crowned the American riflemen in the last international contest. This is devoted specially to long range shooting, and the development of rifles having both lightness, power, and a low trajectory. This is in contradistinction to the former, which aims to secure accuracy with military rifles, and to teach our National Guard to become good marksmen. Both are doing excellent work, for one improves our weapons, and the other advocates instruction in their use.

The third is the Irish-American Rifle Club, which is composed principally of journalists and officers of the National Guard, but it includes also one of the greatest musicians as well as the most popular dramatist in the country. It will enter upon the contests next year with a small but good array of riflemen, and will, no doubt, make a good record.

The Scottish-American Club is composed of much the same material as the former, and in members both are about equal, for the reason that it is material and not numbers that are required. The Scots have several good shots among them, but they expect to have better ere the next season closes.

The last is the American Rifle Club of Mount Vernon, which was recently organized and gave its first exhibition last Christmas Day. This embraces several officers and members of the National Guard, and it therefore promises to do much good.

These clubs ought to be able to infuse a large amount of enthusiasm into our young men and induce them to pay more attention to rifle exercises. The great obstruction to their work is the want of energy displayed by the National Guard—those who should be first to foster such a manly accomplishment—and the lack of anything like practical interest in it by men who have both the time and means to become good marksmen. While the National Association is open to all who pay \$3 per annum, the other clubs are somewhat exclusive, and only a certain class of people are adopted as members; but all who are enrolled among the latter must also be members of the former to entitle them to the use of the range at Creedmoor. By this means the efficiency of the former has been increased, yet the receipts do not by any means keep pace with the expenses. The State and City authorities knowing its financial condition and the good work it is accomplishing, should support it rather liberally, inasmuch as all its efforts are directed toward a patriotic purpose. The means at command should always be sufficient to keep the Creedmoor range in proper repair and make any needed improvements.

This range is now devoted entirely to the use of the Amateur Club, those who are to engage in the contest with our Hibernian friends practice quite frequently, and intend to continue the practice all Winter, so that they may be prepared to meet any emergencies that may arise in the Green Isle. The active members of the team are to be raised to twenty, and from this number are to be selected those who are to take part in the next international contest.

This match is to be for a cup or badge instead of money, and this will take away from it any menial accessories, and prove that it is one to test skill and to obtain honor, rather than one to garner the "root of all evil."

Our riflemen are buoyant in their confidence, yet they do not assume to assert that they are sure to be the victors, but they do express the determination to leave no effort untied to fit themselves for the contest. If the clubs now in existence carry out their programmes with the enthusiasm with which they have inaugurated them, they will be able to send a team across the Atlantic whose chances of returning victorious will be very large.

TRAITS OF NEWFOUNDLAND FISHERMEN.

THE speech of the Newfoundland fisherman is full of phrases derived from his every day employments. To make an engagement for a term of service is to "ship" with Mr. So-and-so. Even servant girls are said to "ship for six months," when they engage with a mistress. A young man "ships" himself to a sweetheart when they are affianced; and a church is said to have "shipped" a new parson; or perhaps he is called the "skipper" of the church. The master of the house, whatever his occupation, is invariably "the skipper," and the mistress is "the woman." "How's the woman?" is the usual way in which a man is asked regarding the health of his wife. Gaining an advantage over a man is called "getting to windward of him." "Mr. Blank is a terrible knowin' man; there's no gettin' to windward of him." Is a man prosperous?—he is said to be "making headway;" if the reverse, he is "going to leeward." To initiate any undertaking is described as "getting it under way," and to live meanly and parsimoniously is "to go very near the wind." There is a world of meaning in the Newfoundland proverb: "The big fish eat the little ones." Thus plithily said with a sort of mournful criticism, do they at times describe their own forlorn condition at the end of a fishing season, when in payment of their debts the whole proceeds of their toil go to the score of the wealthy merchant, while they are half starving

during Winter. Of profitless talk, it is said in reproach, "words fill no nets." A dull, plodding man, who succeeds in spite of deficiency, by honest industry, is said to "get on by dint of stupidity and hard work," a most expressive description.

Another peculiarity of the Newfoundland fishermen, derived from their sea-faring habits, is an inordinate fondness for flags. Every merchant has his flag flying on his storehouse or wharf, as though a state of active warfare existed; while at the principal harbors, the approach of each vessel is signalled by a flag, be it schooner, brig, brigantine or ship. On Signal Hill, overlooking St. John's Harbor, three masts are erected, and at times, when a number of vessels are approaching the port, these, with their yards, look like a draper's shop, with the various flags streaming in the wind. Flags, however, are utilized in other ways. When any important personage has "crossed the bourne whence no traveller returns" the flags are hoisted half mast; but when a wedding takes place all the bunting in the place floats in the breeze. Big "sealing guns," (used in shooting seals on the ice), whose report is like that of a small cannon, are brought out and fired continuously, and evidently afford the greatest delight on these joyous occasions. In the "outports," as all places but St. John's are named, it is usual to catch the happy couple in a net, as they emerge from the church—a symbolic act, perhaps—indicating that both are noted for life. In these "outports," too, church bells are few and far between, and the time for each service is indicated by hoisting on a pole a flag, on which is emblazoned the mitre or the cross. Each school house, too, has its flag-staff; and when the flag is hoisted the urchins are seen coming along the paths—"creeping like snails unwillingly to school."

Near the shores Newfoundland is rocky, the ground being everywhere covered with stones of all sizes. The word stones, however, is rarely used, the smallest pebble and the largest boulder being alike called a "rock." Boys invariably speak of "bring rocks," but never of throwing stones. A servant was asked how she had been spending her time lately. Her reply was: "Why, I has been heavin' rocks out of them raisins for the best part of an hour." Thus "stoning fruit" is "heavin' rocks" in Newfoundland. So abundant are the rocks in some places, and so scanty the soil, that suitable ground for the burial of the dead cannot be found, and amid huge boulders the graves are made by soil brought from a distance; or where this is not possible, the coffin is laid upon the rock, above ground, and then walled in and covered. It is not very uncommon for a grave to be dug less in depth than the coffin. Of course this is true only of certain localities.

Among the primitive population of the "outports," there is, among the Protestant portion, a wonderful passion for choosing names taken from the Old Testament, and these, at times, the oddest and most uncommon they can select. Israels, Rubens, Daniels, Azariahs, and Isaiahs are plentiful as "rocks," but it is rather startling to be introduced to Miss Lo-Ruhamah Tucker or Miss Lo-Ammi Squires, and to be told that the little flaxen-headed girl you are trying to make friends with rejoices in the name borne by one of the daughters of the patriarch Job, Keron, Hapuch, or that the baby's name is Jerusha. To those not quite familiar with scripture names, it may be well to say that the first two are to be found in Hosea I. Ch., 6 v. and 9 v. It is on record that one child was baptized Beersheba, entered in the marriage register in due time as Bathsheba, but always called Bertha by her neighbors. A clergyman of the Church of England relates that once, in beginning a service, in a private house, in an "outport," a woman near him, intending no offensive familiarity, lifted up a corner of his surplice, and after examining it with finger and thumb, pronounced it aloud, "a beautiful piece of stuff." Under similar circumstances he was startled, on another occasion, in the middle of his sermon, by an old woman in the chimney corner calling out to some young ones: "My gracious, girls, I've forgot the loaf! Julia go out to the next house and hang on the bake pot." It must be understood that these incidents occurred in some of the primitive outlying settlements, far from the centres of civilization, where the people seldom see a clergyman, and are quite unaccustomed to the solemnities of religious assemblies. They welcome eagerly the rare visits of clergymen, in these scattered hamlets, and whole batches of children, of various ages, are baptised by him at the same time. So cold is the weather in Winter, in the more northerly part of the island, and so wretched their houses, that in order to keep the loaf from freezing at night, it is the practice to wrap it in the blanket and take it to bed when retiring.

The population is a mixed one, nearly half being descendants of Irish settlers, the rest English, most of them sprung from progenitors who came originally from Devonshire, Dorsetshire and Hampshire. The descendants of the latter retain many of the peculiarities of speech which still distinguish the peasants of Devonshire. They say, "I's took no notice to she," that is no notice of her. "Did 'ee want anything w' I?" They speak of their "handes" and "postes;" of their cows being "alossed" and their bread "amade." They will say, "Mubbe I's gone home." The parson is "parson," and they ask him to "bide a spurt" with them. A "spell" is either a short continuance at labor or a time of rest. Short distances are, in common speech, measured as "spells." Thus "two shoulder spells" is the distance a man would ordinarily carry a burden on his shoulders, resting once in the midst. The word "obedience" is sometimes used for "obedience." Thus children are directed to "make their obedience," that is, to bow,

or courtesy. The inhabitants of a settlement are called "livers," and if any district be uninhabited there are said to be no "livers" in it. An expressive phrase is used to indicate a fall in the temperature, "To-day is a jacket colder than yesterday." "How do times govern in St. John's?" is a common question which is answered by recounting the price of fish, oil and provisions. "Praise the fair day at 'em," is a Scotch proverb which has its counterpart in Newfoundland: "Praise the bridge that carries you over." The folly of lazy, shiftless expedites is well expressed by saying: "He sits in one end of the tilt and burns the other." When admiration of a benevolent man is expressed, he is described as "a terrible kind man," or the weather is commended by saying "it's a shocking fine day." Clever, in Newfoundland, means strong or large. A "clever man" is a stout, large man; a "clever baby," is a hearty, big baby. A singular use of the word "accommodation" is common. A person of bad repute is said to have "a very bad accommodation," or a servant on leaving his master requests "an accommodation," evidently a corruption of "recommendation."

With all their primitive and often amusing peculiarities and local customs, the fisherfolk of Newfoundland have many sterling qualities of head and heart; and all they want to put them on a level with corresponding classes in other countries more advanced in the arts of civilized life, is education. No one could live among them without liking them. In simplicity of character, warmth of heart, kindness and hospitality, they are unsurpassed.

FLORIDA ROUTES.—The increase in the number of tourists traveling to Florida every year, to enjoy its balmy climate and tropical scenery, and to avoid the fierce blasts of our Northern Winters, has caused the steamer and railroad companies to make every effort that would add to the comfort of travelers. In order to place such a trip within reach of all classes of invalids the Pennsylvania Railroad Company has made such terms with connecting roads, as far as Jacksonville, that excursion tickets for the round trip from New York to Jacksonville can now be purchased for from \$50 to \$80, according to the route selected. The Pennsylvania Railroad Company is entitled to the thanks of the public for its enterprise and energy.

REPLY.—In order to obtain all possible information relative to the advantages of each style of rifle manufactured in the United States we have addressed letters to every manufacturer of arms containing specific questions, but we are sorry to state that few indeed have responded, and they are those whose weapons are best known. We return thanks to Lieut. Metcalf, of the Springfield Armory, the Remington Company and the Whitney Arms Company, for their prompt alacrity in answering our note. If the other companies would benefit themselves as well as an inquiring public they ought to respond, even if their answers are only partial.

—All officers of the Army and Navy, by authority of the higher powers, will be permitted to make collections of the fauna of any portion of the world in which they may be stationed for the benefit of the Zoological Society of Philadelphia. This interest in science will be duly appreciated by all interested in the natural history collections of our country.

—A. B. Lamberton, of Rochester, has accepted an invitation to read a paper at the next annual meeting of the National Sportsmen's Association at Cleveland in June next. His subject will be on Nomenclature.

HOW TO RAISE QUAIL.

WE reproduce from our issue of Feb. 12, 1874, the following article, in order to serve the interests of many of our readers at the present time, and also to supply in part the demand for this particular issue of our paper, which is now out of print.—ED.]

OFFICE OF WEST JERSEY PROTECTIVE SOCIETY.

February 10th, 1874.

EDITOR FOREST AND STREAM:—

I have been requested by a fellow member of the West Jersey Protective Game Society to give you a slight sketch of my small experience in the raising of partridges, with the hope that others who have, or do interest themselves, in the laudable pastime of raising and protecting game, may derive some benefit, however small, from my slight experience.

There are three ways of raising or protecting partridges in this country, and everyone who is interested in the protection of game, should, if possible, adopt one of these three ways according to his means and time. The first and most common way is to feed the birds by throwing out either screenings of oats, rye, wheat, or some corn, in some place where the birds are in the habit of roosting. This should be done with some discretion, otherwise it would become expensive and burdensome to a poor man to feed birds every day. If, however, it is done two or three times before the heavy snows of the Winter have set in, the birds will be likely to remain in the neighborhood, and when the snow has entirely prevented them from getting their food, a few days feeding at such times will enable them to outlive a storm and Winter. This plan is very commonly adopted all over the country, and when judiciously managed, has been found to be of great success. But I will here add, if more extensively carried on, it would greatly increase the amount of game. I would suggest to those who have farms, and who either lease them or employ their own farmers, that a small reward of five or ten dollars to their tenants or farmers for their trouble in protecting and feeding the birds over the Winter, would insure many more birds for the Fall shooting, and would be well worth the outlay.

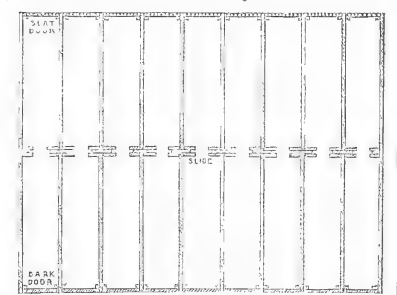

The second plan is the more expensive and troublesome, and depends much upon the means and accommodation one has at hand to carry it out. The plan is that of putting the birds in a room or loft, and arranging bushes around the room so that when frightened, the birds can hide in the bushes. The plan is objectionable for several reasons, and should not be adopted unless one has no other means at hand. It is objectionable because the birds are kept together and thus are liable to pack in the Spring, and hence all your time and trouble goes for naught, and it is also at fault because it makes it difficult to clean the room, and when you wish to turn the birds out of a box, in a desirable place, (which is the only proper way, and not as is often done by opening a window and letting them fly out,) the birds are liable either to hurt themselves when thus frightened, or to be injured by being too roughly handled. If no other way, however, is feasible, this plan of rising birds should be adopted.

The third and last plan, and the one in which I have had the most experience, is perhaps the most expensive and troublesome, but is by far the most desirable; it is the keeping and raising of birds in pairs in boxes. In raising birds, light, air, cleanliness, and proper food, are the first and most important essentials to be looked after, in order to have the birds in good condition to turn out in the Spring.

The box in which these birds are confined should be made as follows:—It should be seven feet wide by ten feet long and one foot high; the top be padded with some soft substance like cloth or muslin, so that when frightened, the little fellows will not hurt their heads against the top of the box on flying up. The trouble, however, of padding can

be avoided by making the box lower, but this is not desirable, as the birds have very little room to use their wings; and I have found on letting them out in the Spring, that from their long confinement, they have not for several days regained the full use of their wings. Divide this box in the middle by a piece of board running the whole width of the box and divide each half thus made, lengthwise, by nine partitions, (for as many as you wish,) this will give you twenty separate boxes, each one foot by three and a half feet long. The partition, running the whole length of the box, gives you a light and dark box, which communicate by a door with a slide which can be gently raised and shut down at your discretion. The object of the boxes is, that while the birds are in one box you can clean the other without disturbing them, and when you approach the front of the boxes they will run from the light to the dark box. The communicating door being gently closed enables you to throw in feed or clean the boxes as you wish.

PLAN—SCALE, 7-24ths TO THE FOOT.

The front door to each box or partition should be its entire width, and made of slats half an inch apart, and should be hung on hinges from the top and fastened at the bottom; this enables you to clean the partitions more readily and also feed the birds. The sides of the dark box should be bored with half inch auger holes for ventilation, as also the back door of the dark box, which is the same width, and hung and fastened like the door of the front box.

SLAT DOORS.

The communicating door is large enough only to let one bird pass through at a time, and the slide that covers this door is lifted up from the top, and regulated or kept up by a little wooden pin. These boxes can be made for fifteen or twenty dollars, and I have found from experience are excellent both for air, light, &c., and are most handy. Care should be taken to see that the boards on the inside are smooth, so that the birds cannot hurt themselves. The next important step is the food.

DARK DOORS.

The best food is mixed bird seed, and occasionally a little wheat; wheat, itself, is too strong, as is also corn for birds confined in this way. Gravel and sand should also be thrown on the floor of the box and occasionally a clod of dirt. A zinc bath tub, three inches high and six inches long, with the edges turned down, so that they cannot cut their feet, and heavy enough not to turn over, should be put in the box with fresh water every morning. This is very important, as the birds on coming out of the dark box will be observed almost invariably after feeding to take their

bath, and I am satisfied, from experience, that their condition is greatly improved by it. The box should also be cleaned every morning, as nothing is more injurious to the health of a bird thus confined than a dirty box. In such a box, with the capacity I have just described, I could clean all the boxes, water and feed all my birds without frightening or disturbing them, in the space of ten minutes. In two or three instances, where I have given the above directions as to the building of boxes, to other gentlemen desiring to raise birds, I have in each case been told that not a single bird has been lost, although it was their first experience in raising them.

The next step is the letting out of the birds. This is most important, as you may have all your Winter's trouble and loss, if the proper precautions are not taken at the proper time. The time, therefore, and the way in which the birds are to be let out, are two very important steps in the object you wish to achieve.

As soon as the snow is well off the ground and the grass commences to start, then let them out in some thick cover by pairs or in fours, two cocks and two hens, and at the interval of a day or two between each pair or fours, as the case may be. Thus, by letting them out, rather late in the season, and by pairs or fours, you attain two objects, which are desirable. The first is, that birds confined in a box and regularly fed, will migrate several miles, unless they are able to get their food when first let loose, and it would not be amiss for one or two days to drop some food at the box door, as they are almost sure to come back if they are not able to feed themselves. By letting them out in close cover you give them a place to take at night and a place to retreat to from their mortal enemy, the hawk. Secondly, by letting them out by twos or fours you enable the female to change her master, if she so wishes, which is often the case, and you prevent that which is more important, the whole covey from "packing," as it is called. Packing is where a covey, instead of pairing and breeding, stay together, and so travel all through the breeding season. Should this happen, all your pains are taken for nothing. This I have seen occur twice, and entirely from the fact, I think, of their being let out too late, which was done during the latter part of the month of June. Whereas, birds kept in the same box and a part of the same covey let out in the early part of the month of May, all paired off and had their young. I would, therefore, advise their being let out as soon as the Spring has well set in. They thus get food and warmth, (for the change is great for them, from a covered box to a roost in the open air,) and protection from hawks. A swamp is an excellent place to let them out. In conclusion, I would advise that no bread should be given as food, as I have known it at times to have killed many birds, and on opening them have invariably found the bread caked in their crops.

Under the method I have just described, I have raised eleven coveys out of twelve pairs of birds let out, and again six coveys out of six pairs turned out, and also six coveys out of eight pairs turned out.

I have recommended the birds being paired in the boxes for the reason that when the breeding season commences, about the end of February, the birds will commence to fight, and I have lost in one night all my birds, except one cock and hen, which were so cut up as to be of no use. As you never know when such a disaster may take place, it would be safer to pair them as soon as you get the birds.

I would advise all clubs to use this system of raising birds; the expense can be more easily borne, and as it will be under one person's direction, it would therefore be more likely to be successful.

If, Mr. Editor, you should think this article worthy of your paper, I will live in the hope that some trustworthy person, having read the foregoing, will try it, and thus attain the object for which it is written, viz: the successful raising and breeding of partridges.

PROTECTOR.

WISCONSIN POULTRY ASSOCIATION.—The Wisconsin State Poultry Association will hold its annual exhibition at Milwaukee, February 26th, and will continue it until March 5th. Besides the premiums for poultry, some excellent ones have been prepared for cage birds and household pets, such as guinea pigs, white mice, dormice, squirrels, rabbits, ferrets, minks, cats, and dogs. The Association prizes for dogs are \$5 for first and \$3 for second, for each variety exhibited, and FOREST AND STREAM has added three special prizes in the shape of three of its yearly subscriptions, for the best hound, setter and pointer in each of those classes. Many prominent sporting gentlemen in Chicago and Milwaukee have promised to aid the society rather liberally, and to exhibit their animals besides. The managers of this exhibition are enterprising gentlemen and deserve much praise for their effort to improve many of the domestic animals of their State.

—Grasshopper-eaten Kansas settlers are migrating to Florida in considerable numbers.

—The temperature at New Smyrna, Florida, on Christmas Day, was sixty-four degrees at 7 A. M., seventy-six at 2 P. M., and sixty-nine at 9 P. M.

—A meeting was held in Detroit last week for the purpose of having the next regatta of the National Amateur Association at that place. The sum of \$1,500 is needed to bear the expenses, and it is supposed that this amount can be readily raised. *Wilkes' Spirit* says:—

The citizens of Saratoga are intent upon securing the return of the collegians to Saratoga Lake for the next regatta. A meeting was held last week, and it was then resolved to increase the facilities of transportation to the lake by building a railroad thereto. The meeting was adjourned to last Wednesday evening, and the sub-committee on stock subscriptions has issued an appeal to the citizens to come forward and subscribe, so that the road can be paid for in cash, thus diminishing the cost of construction. Messrs. Ferry of Yale, Van Duzer of Harvard, and Rees of Columbia, have visited Saratoga with a view of ascertaining what would be done to further the interests of the regatta. We trust the Saratoga folks will not overlook the necessity of providing a faster boat to accompany the race, quite as important as the success of the regatta, as the accommodation of visitors in getting to and from the lake.

Shot Gun and Rifle.

GAME IN SEASON FOR JANUARY.

Hares, brown and gray.

Wild duck, geese, brant, &c.

FISH.

Deer, Wild Turkey, Woodcock, Quail, Snipe, Ducks and Wild Poul.

Under the head of "Game and Fish in Season" we can only specify the general classes of game, because the laws of the State vary so much that it is impossible to particularize. We could do so here, but this would require sections that relate to the kinds of game in season. This would require a great amount of space, in describing game laws, and the laws of nature, upon which all legislation is founded, and our readers would do well to provide themselves with the laws of the State for constant reference. Otherwise, our attempts to assist them will be of little or no value.

GAME IN MARKET.—Wild turkeys are getting rather abundant and retail at twenty-five cents per pound. Ruffed grouse retail at seventy-five cents per brace; prairie chickens bring the same price; brant are scarce at \$1 75 per brace, but ducks are common. Mallard bring \$1 per brace; canvas backs \$2 50; quail rare at \$3 per dozen; English pheasants \$6 per brace, and English hares at \$3 per brace. Small snipe from Virginia sell at seventy-five cents per dozen, although they are not very abundant.

MASSACHUSETTS.—Andrew Bates, of Hanover, Mass., captured 2,000 skunks last year, the skins of which brought him eighteen dollars a dozen. And last year was not a good one for skunks in Massachusetts, either.

MARYLAND.—*Deer Park, December 29th.*—Not much of importance this week, for the deep snow and rainy weather have spoiled the shooting, with the exception of shooting at turkeys in a box with their heads for a target at a hundred yards.

Game is very abundant. From all that I hear I should think it would be cheaper than other kinds of food.

ALEXANDER.

IOWA.—*Reelfoot, Dallas County, December 29th.*—Our quail shooting closed first of January. Have had good sport lately. Within the last four weeks I have been out five times averaging five hours each trip, and bagged one hundred and sixty. They were nearly all killed in the thick brush where I think I do well when killing once in two shots. I am quite partial to this kind of shooting, for although one can't get so many, there's twice the honor in what you do get. Yesterday I shot one which flew quite a distance and struck against a steep creek-bank. On going to look for it the dog evidently smelled something in the water which ran from under a piece of ice attached to the bank, and plunged his head clear under several times, feeling the bottom carefully with his nose. On breaking up the cake of ice the dead bird was found lodged against some drift beneath it. It had fallen into the water above and the current swept it under. O. H. HAMPTON.

MINNESOTA.—*Brainerd, 29th.*—A. Mr. Clayton, an English gentleman, has bought eight hundred acres on Fish Trap Lake near Brainerd, Minnesota, and opened a fish farm. He has a good boat on the lake, which abounds with fish. Deer, grouse, rabbits and other game on his premises, and the finest outfit of guns probably in the State.

The Warfield Brothers, of the old Kentucky family of that name, have bought on several farms at Pelican Lake, Minnesota, including Ponder's famous snipe-sporting place. They have introduced several car-loads of blooded hares and honed stock which will be of untold value in that region. They have imported bird-dogs and hounds, so that Winter and Summer alike on prairie and lake they can enjoy the sports of the chase. His offer of a hunter's hospitality will be something in these woods next year.

Godfrey Vivian, M. D., of Alexandria, Minnesota, has for some years bred and raised a very superior quality from imported stock. With a party of friends and hunters since he killed nine deer in one week. The last, a noble buck, after a long run turned to fight the dogs, but, closer pressed, took to the lake where two dogs followed him, and when he was shot and they taken into a boat. He weighed dressed two hundred and twenty-eight pounds.

General G. A. Custer passed through Brainerd on the lake through trap lake, in a special car with Mr. C. W. Mead, General Manager of the Northern Pacific R. R., on his way to Fort Lincoln opposite Bismarck, Dakota. He had some fine fox hounds from Kentucky and a high bred pointer with which to replenish his large kennel. With his fox hounds, stag hounds, and greyhounds he expects to make the woods about the Missouri musical this Winter.

Mr. Thomas P. Cantwell, your graceful wood-carver, in describing Minnesota sports under the name of "Haviland," has the land at the end of his garden fenced high, and a fine large dog-house built therein, partially underground. He has several blooded dogs, especially a fine fox hound built with a large litter of puppies.

MISSOURI.—*Salida Dec. 29th.*—Nice clear mild weather. Plenty of game. Ducks, mallard and wood, two to four bits per brace. Quail dressed five cents each. Prairie chickens fifteen and twenty-five cents each. Rabbits ten and twenty cents each. Fox squirrels ten cents each.

CANADA.—*Gravenhurst, Muskoka, Dec. 29th.*—The steamboats made their last trip on the 28th of November this year, which is about the usual time they stop running. The lakes up here are generally frozen by the first of December. All the hotels in the district are open both Winter and Summer. The depth of snow now is about 18 inches, and the average depth is about the same.

We have good roads in the Winter and generally good sledding from about the middle of this month until the first of April. The Northern R. R. now extends to Severn Bridge which is two miles further than Wasaga.

Stages run from Severn Bridge on the arrival of the train from Toronto to Gravenhurst and Bracebridge at eight and nine-thirty A. M. to connect at Severn Bridge with the trains for Toronto. Tickets from Toronto to Bracebridge \$2.50. A stage also leaves Bracebridge for Rosseau and Parry Sound every Monday, Wednesday and Friday. Returning leaves Parry Sound for Bracebridge on the same days at eleven A. M. There is also a mail stage leaves Rosseau every Tuesday morning for the Magallowa, but don't return till the following Monday. There is not much fishing done here through the ice. There has been a few speckled trout, salmon and pickerel caught, but nothing to speak of. I intend to have a few days

fishing through the ice next month, so a few hints on fishing through the ice in your valuable paper would be very acceptable just now. This month closes the hunting season. JOSEPH SCOTT.

GEORGIA.—The Savannah *News* says a snow white deer was killed at Schlatterville on the 23d ult. Two brothers named Ezell, living in Putnam county, have killed thirty-four wild turkeys during the last Fall. A sixteen pound otter has been captured in Monroe county.

—An elk of large size has been seen within the past fortnight in the northern part of Marquette county, Wisconsin. Several hunters have pursued him, but failed to get within gun shot.

—The quail taken from California to Nevada were thriving well among the sage brush, when some idiots, fond of sporting, butchered a large number of them.

—A call has been issued to the citizens of Kent county, Michigan, to meet at Grand Rapids, January 14th, to organize a county sportsmen's club. The call is signed by nineteen gentlemen.

—Colonel George W. Wingate, the energetic Inspector of Rifle Practice in the Second Division, N. Y. S. N. G., has issued his first annual report, and quite an interesting one it is from its very sensible comments and deductions. He thinks it a piece of idle work to send inexperienced men practising at a target 200 yards distant when they cannot hit one more than 50 yards off. He, therefore, recommends that novices begin at 100 yards, and increase the distance as they improve in marksmanship until they can assume the recumbent position at 400 yards. His suggestion that the Creedmoor Range should be thrown open to the National Guard, when in uniform, free of charge, is apropos, for otherwise they cannot practice with the assiduity necessary to make them good marksmen. If the State were to increase the appropriation to enable this to be done, it would be money well expended. We learn from the report that the regimental teams of twelve men each, made the following total aggregate at 200 and 500 yards: Twenty-third 207 points; Fourteenth 131; Thirty-second 162; Forty-seventh 153; Twenty-eighth 136; Thirteenth 123; Fifteenth Battalion 60. The Inspector thinks that better shooting would have been done if the shells issued were better.

—Objections are made against the Wimbledon style of targets adopted by the American Rifle Club of Mount Vernon by a very competent authority, for several reasons; the principal being that uniformity of scoring throughout the country is destroyed and therefore that the scores of marksmen cannot be compared, and also that the machinery for marking, used at Wimbledon, does not exist here. We shall publish an article on this subject, by our highest authority, next week.

A running deer of iron, on the Wimbledon plan will be one of the objects to be fired at during the present season at Wimbledon. Double barreled rifles will be allowed in firing at the salientaries, so that the chance for hitting it is good.

—The Leech Cup will be shot for next May. The winner thereof last year then returns it to the Board who will give him a badge, proving his victory, in place of it.

—Col. Gildereslee will probably command the next American International Team, as pressing duties may not permit Col. Wingate to cross the Atlantic this year.

—All American citizens can shoot for the Leech Cup.

—The California Riflemen have not yet returned an answer to the challenge of Co. D, 12th Regiment.

PIGEON SHOOTING.—The first day of the new year was pleasantly passed by members of the Long Island Shooting Club, who, having a large number at Dexter's, on the Jamaica road, they decided one match, four handicap sweepstakes, under the Long Island rules, and two handicap sweeps, from five traps, English rules governing. The following are the matches and scores, as furnished to the Herald:

Match of \$100; 25 birds each; 21 yards rise, eighty yards boundary; 11 oz. shot.

Charles Ireland—Total, 20; killed, 11; missed, 6.

G. Walters—Total, 20; killed, 11; missed, 9.

Handicap sweepstakes, \$3 each, 3 birds.

M. Baylis, 21 yards—Total, 10; killed, 10; missed, 0.

C. Ireland, 21 yards—Total, 10; killed, 10; missed, 0.

M. Baylis, 21 yards—Total, 10; killed, 10; missed, 0.

W. Ireland, 21 yards—Total, 10; killed, 10; missed, 0.

Handicap sweepstakes, \$3 each, 3 birds; \$18 to the first and \$9 to the second.

Mr. Atkinson, 21 yards—Total, 11; killed, 11; missed, 0.

W. E. Birdseye, 21 yards—Total, 11; killed, 11; missed, 0.

C. Ireland, 21 yards—Total, 11; killed, 11; missed, 0.

M. Baylis, 21 yards—Total, 11; killed, 11; missed, 0.

W. Ireland, 21 yards—Total, 11; killed, 11; missed, 0.

Handicap sweepstakes, \$5 each, 3 birds; \$20 to the first, \$10 to the second and \$5 to the third.

M. Baylis, 21 yards—Total, 10; killed, 10; missed, 0.

C. Ireland, 21 yards—Total, 10; killed, 10; missed, 0.

Dr. Atkinson, 21 yards—Total, 10; killed, 10; missed, 0.

W. E. Birdseye, 21 yards—Total, 10; killed, 10; missed, 0.

Handicap sweepstakes, \$5 each, 3 birds; \$20 to the first, \$10 to the second, and the two lowest to pay for the birds.

Mr. Atkinson, 21 yards—Total, 10; killed, 10; missed, 0.

M. Baylis, 21 yards—Total, 10; killed, 10; missed, 0.

W. E. Birdseye, 21 yards—Total, 10; killed, 10; missed, 0.

Dr. Atkinson, 21 yards—Total, 10; killed, 10; missed, 0.

—Several members of the Long Island and Jerome shooting club and their friends, assembled at Dexter's, on Long Island, on Saturday afternoon to witness the conclusion of the pigeon match for \$400 between Messrs. W. E. Birdseye and James M. Hickock of Brooklyn, begun on Christmas Day. On that day the contestants shot at fifty birds, thirty yards rise, English rules. The result was a tie, each killing twenty-six out of fifty. They agreed to let the stakes lie, and shoot at thirty additional birds on Jan. 2, same conditions. Birdseye won. Out of the seventy-four birds shot at, Birdseye killed forty-four. Hickock killed thirty-six.

The Match for \$100, between Dr. Atkinson and W. C. Toot, at thirty birds each, English rules, was won by Toot, who killed twenty-one to his opponent's sixteen.

A pigeon shooting match between amateurs, representing New York and Philadelphia, took place on the Delaware last Wednesday at the grounds of Mr. Sartori. The day was rather favorable for the sport, being slightly cloudy. The match was between C. Livingston and J. G. Heckscher, of New York and General Grubb and George Potts, of Philadelphia.

The shooting was at thirty yards rise, each contestant being entitled to shoot at twenty-five birds, under English rules, and the stakes were \$3,000.

The contest resulted in favor of New York by the following score:

Livingston, 25; Heckscher, 14. Total for New York, 39.

Grubb, 18; Potts, 10.—Total for Philadelphia, 28.

Two sweepstakes were also shot for, and both were won by Mr. Heckscher.

SENeca FALLS, January 1, 1875.

EDITOR FOREST AND STREAM:—A match between H. Sibley and W. J. Peck at twenty-five single birds, plunge traps, 21 yards rise, took place today. The following is the score:—

H. Sibley—111011011001110111101111—19.

W. J. Peck—010111110011011101111111—19.

Match between H. Sibley and J. D. Burroughs, twenty-five single birds, same as above, with the following score:—

H. Sibley—11111011111111111111—21.

J. D. Burroughs—1000111111010011011111—15.

Geo. M. COMSTOCK, Referee.

COOT SHOOTING.

ROCKPORT, MASS., December 28, 1874.

EDITOR FOREST AND STREAM:—If "S. K. Jr.," will visit our town in the cool season, we will show him how to shoot at coots in a dory. Dories are used here to the exclusion of all other boats, on account of their safety. A "sallybury dory," in the hands of a sailor, will outlive all the gunning punts on the coast. Our fishermen use these "masted" dories when handling their trawls on George's Banks. It seems to me that fact is enough to establish their seagoing qualities. When the wind is "out East," and blowing a whole-sheer breeze, we can lay in our dory at Stagsmouth Point, and get the cream of coot shooting, while our visitors, in their shooting punts, are glad to "pull up kill cock," and make a lee between the island and main, or start on the home stretch for Rockport. When setting dories, always have them head toward the boat, as it is a matter of etiquette with the duck family to fly to the head end of your dorys almost invariably, and then turn and fly down the line of sail, drenching you from top to toe. Have many days laid off the Minot's with dorys, and without dorys, and have obtained as many ducks in a day without dorys as with them. I never the to the boat, but prefer to anchor them independently. The birds, to me, seem to know there is some connection with the dorys and boats. If you can't believe the theory, please watch a few large ducks of salt water, drenching you from top to toe. Have many days laid off the Minot's with dorys, and without dorys, and have obtained as many ducks in a day without dorys as with them. I never the to the boat, but prefer to anchor them independently. The birds, to me, seem to know there is some connection with the dorys and boats. If you can't believe the theory, please watch a few large ducks of salt water, drenching you from top to toe. Have many days laid off the Minot's with dorys, and without dorys, and have obtained as many ducks in a day without dorys as with them. I never the to the boat, but prefer to anchor them independently. The birds, to me, seem to know there is some connection with the dorys and boats. If you can't believe the theory, please watch a few large ducks of salt water, drenching you from top to toe.

COOT SHOOTING OFF MINOT'S LEDGE.

EDITOR FOREST AND STREAM:—"S. K. Jr.," in a short article upon coot shooting off Minot's Ledge, in the last number of FOREST AND STREAM, gives quite a correct idea of the true way of taking these ducks. For a novice, in a dory after coot, in such real northeastern as those in which I often used to shoot, his first attempt would probably be his last, at coot shooting in a storm in a day shell.

I all agree that coot shooting is an exceedingly "heavy" sport, and that is about all there is of it. To beg a couple of dozen out, on a rough November day, in a good, staunch boat, is not a small day's work, especially when the wind blows very strong off the Ledge, one end of your boat one moment down in the trough of the sea, and the next moment upon the crest of the wave, and this pitch and toss movement is pleasantly varied with double loads of salt water, drenching you from top to toe. Have many days laid off the Minot's with dorys, and without dorys, and have obtained as many ducks in a day without dorys as with them. I never the to the boat, but prefer to anchor them independently. The birds, to me, seem to know there is some connection with the dorys and boats. If you can't believe the theory, please watch a few large ducks of salt water, drenching you from top to toe. Have many days laid off the Minot's with dorys, and without dorys, and have obtained as many ducks in a day without dorys as with them. I never the to the boat, but prefer to anchor them independently. The birds, to me, seem to know there is some connection with the dorys and boats. If you can't believe the theory, please watch a few large ducks of salt water, drenching you from top to toe.

GOOD GROUND FOR DUCKS.

New York, January 1, 1875.

EDITOR FOREST AND STREAM:—We hear that some parties have visited Good Ground, I. I., for ducks on what they understood was the recommendation of "Jacobstaff." They have been disappointed. To all such we would say, that if they will drop a line to Mr. William Lane (Good Ground), they will receive a prompt and truthful answer; will be told when, and only when, birds are to be obtained, and if they go down they will meet with generous treatment, and on the word of "Jacobstaff" they will find their bills, both as to gunners and the other individuals, moderate and satisfactory.

In saying this much we have no other intention. In the matter than an honest desire to see our brother sportsmen and readers of the FOREST AND STREAM of what we think is one of the best localities in the vicinity of the city for birds in the season. Having been down there several times, both sniping and during ducking time, "we know whereof we speak." Mr. Lane will not need for sportsmen to come to the Bays in there will be a fair prospect for a bag. He will do his best for them, and he will not go for every dollar they have got before they leave. Yours truly, JACOBSTAFF.

BOWDEN'S SWALS, TENN. RIVER, December 30, 1874.

EDITOR FOREST AND STREAM:—We have had a good many ducks, hares and squirrels to live on since we've been on the winter. Consequently, and the other day, when we were camped at the mouth of the Little Tennessee, opposite Leona's Station, we got a season (7) weighing 11 pounds. (What kind of fish was this so, called salmon, Mr. Editor?) Two trappers and fishermen had been there

for one or two months, fishing being their principal business. As these trappers were good boatmen, I hired them. They had then three or four salmon (1 weighing ten or twelve pounds). We have met with several trappers here who trap all the winter, and live pretty much like Indians. They have a "coono," (cannon) some shotguns, fishing line, nets, etc., and a long rifle, with a little bar for balls, and a coon's skin cap. They live in "chebangs," made of plank, poles, or reeds, as chance directs, and they "git the run on the varmints" in one or two nights. One old fellow was camped on Belle Canton Island, and while we were there caught eleven muskrats and seven coons in one night, which was good sport for a week, I suppose. He had a "ketcher" (i. e. a muskrat tender) of going up Little Tennessee, to get a few bear, as his skins are more valuable.

I rather fancy the life would be much more conducive to plenty than engineering. With a good shot gun and a rifle, I could have the finest wild game for food. The fishermen I hired have a boat fifty feet long, with a house on it, a cooking stove, two porcelains, and a place to keep live fish in all the time, also nets, fishing tackle, etc., together they would have a good time, if they would only wash occasionally and keep a change of clothes. There were nearly two pounds of ova taken from the salmon (7) by guess. There were two lobes each or ten inches long, and from one and one half to two inches wide and about one inch thick. You can estimate the number probably. I killed a pheasant, two hares and a squirrel the other day, and we had very often as much game as we can eat. How would you and your family like to join in an rifle on the water? Yours truly, A. B. C.

The salmon of the Western rivers is known to us as the pike-perch.—Edo.

LEXINGTON, KY., December 28, 1874.

EDITOR FOREST AND STREAM:—

At the annual election of officers, December 28, for the Hunter's Club, the following were elected for 1875: R. A. Thornton, president; Major John R. Clay, vice president; J. M. Taylor, secretary and treasurer; Horace G. Craig, Frank Waters, Dr. W. W. Dudley, directors. By order of the president, I have notified the members of the Executive Committee to meet at Lexington, Ky., on Wednesday, December 30, to arrange the programme for the meeting of the Kentucky State Sportsmen's Association, the third Tuesday in May, at Paris, Ky. Numbers are constantly joining the Association, and it promises to be one of the largest of State Associations. Will send programme when published. J. M. TAYLOR, Sec. Ky. S. S. A.

A HUNTING TRIP.

NEW YORK, December 31, 1874.

EDITOR FOREST AND STREAM:—

Some twenty years ago my two brothers and myself decided to go to Chicago on a hunting expedition, taking with us "Sid" Smith, a well known shot who had some of the best of the State Sportsmen's Association from his home, but who had never been on the great prairie of the West. Fully equipped with all sorts of "shooting iron," and a brace of setters, we left New York in December, 1854, via Erie R. R., and reached Chicago in due time, and having hired a wagon and noble team of white horses, we started out in fair spirits for the Kankakee River, but in crossing the woods and soft places of the prairie had to wend forward an advanced guard, to make depth of soundings. After prying out the vehicle several times the harness gave way, and we had no alternative but to walk. That night we stopped at a farmer's house, whose hair was down his back, and who said there had not been a barber there for five years. So Sid Smith, to oblige him, offered to perform the task, and a pair of sheep shears were produced, a small mirror, and a change in the appearance of the backwoodsman entirely satisfactory to him, but being out in furrows, is not the present style of wearing the hair. We dined on racoon meat, and our appetites found no fault with the fare. We traveled forty miles on foot, and I had just entered a woods for quail, when I was startled by the snapping of the twigs, and saw a noble deer bounding from the brush. It came near my gun, loaded with No. 10 shot, was discharged in his forequarters, but he gave a snort and headed off, and was soon out of sight. Nevertheless, deer were plentiful in the tamarack swamps, and we took three noble specimens here. Such a thing as going such a distance from home, at that time, was almost unknown, and we were the objects of much curiosity wherever we stopped with our game. On our return by Lake Erie we took a very large, but very old, steamer, and as she was very heavily loaded, and a severe gale coming on, we were near going to the bottom. The steamer's adjoining ones were occupied by two young men, one of whom had recently married, and he was constantly bemoaning his fate, expecting his wife would soon be a widow. On our trip to the South Ste. Marie, the steamer General Jackson, on which we were passengers, exploded her boiler and killed four men, but we safely got home with a lot of venison and game, and kept our neighbors supplied for weeks after our return. F. C. F.

ANOTHER GUN CHALLENGE.

JACKSONVILLE, Ill., December 28, 1874.

EDITOR FOREST AND STREAM:—

I am authorized by the president of the Kit Carson Sportsmen's Club, Macon, Mo., to offer in his behalf a challenge to any club in the United States, for one hundred dollars and upwards in field shooting. The locality to be mutually agreed upon, either in Missouri, Illinois, or Kansas, the game to be not over 100 yards, and a shot to be chosen from each respective club. The game to be anything in season. M. M. B.

PLAIN QUESTIONS PLAINLY ANSWERED.

PORTLAND, Me., December 23, 1874.

EDITOR FOREST AND STREAM:—

In your paper of 7th inst. I see that "Check Cord" asks a few questions of "sportsmen," and as I claim to belong to the brotherhood, will answer them according to my views, hoping others will do likewise. 1st. "Is there any real satisfaction in shooting Wilson (English) snipe during the Spring light?" Don't know, never having tried it. It costs 100 per cent more to get it here in Maine, and ought to cost at least in Shrewsbury, 2d. "Are we not working against our own interests in shooting wild fowl during the Spring?" I don't think we are; the case is not parallel to that of snipe. The eggs in the female are not far towards development at the time of our Spring coast shooting of wild fowl. Wood ducks are protected with us, and any attempt to prohibit the shooting of either wild fowl during the Spring would cause such an outcry as would endanger all our game laws. 3d. "Has not last summer's experience proved to most sportsmen the need to abolish Summer woodcock shooting?" No; but it has proved to many of them the need to abolish eight snow storms in April. 4th. "Is it sportsmanlike to encourage the trapping of wild pigeons during the winter, and are they not necessary?" etc. Trapping birds of any kind, or at any time, is un-sportsmanlike, and a perfectly practicable protection for wild pigeons must be sought through the Legislatures of the States where they breed. Mac.

To AVOID WET FEET.—Here is another way to prevent water from getting through shoes. The composition also makes a good harness dressing. Take neatfoot oil, one and one-half pints; beeswax, one ounce; spirits of turpentine, four ounces; and stir well together. Spread and rub this composition over the leather while it is damp; leather will absorb oil and grease better when damp than when dry. For the soles, take pine tar and rub it in before the fire until the soles will absorb no more. Three or four applications will be needed. The durability of the soles will be much increased.

Dachting and Boating.

All communications from Secretaries and friends should be mailed no later than Monday in each week.

HIGH WATER, FOR THE WEEK.

A MODEL YACHT.—Mr. Joseph B. Van Deusen is constructing at Williamsburg a centreboard schooner yacht for Mr. William T. Garner, of the New York Yacht Club, and owner of the dainty Magic. The new schooner will eclipse the famous Sappho in the matter of dimensions, and will be built after that peculiar principle observed in the Columbus and last year's perfectly developed in the steam yacht Ideal. She will be 121 feet on the water line, 138 feet on deck, more than 140 feet over all, 39 feet 4 inches breadth of beam, 9 feet 4 inches depth of hold, and about 230 tons burden. Her centreboard will be 30 feet long by 14 feet wide. The vessel is to have a draught of 6 feet, with her centreboard down she will draw about 31 feet 6 inches, considerably more than the load draught of the largest deep-sea schooner. Her rig will be that of a fore and aft schooner. The spars will be of the best material to procure sticks, reaching 100 feet if they can be procured. The topmasts will be 50 feet in length, so that if the Brooklyn Bridge is ever thrown across the East River, and the new yacht is then aloft and wants to go that way, they will require to be hauled. In all details the new yacht will be constructed in the most approved manner. Not a detail of which she will be satisfactorily introduced will be omitted by her successors builder. It is expected that this craft will be fully finished and ready to go into commission by the 1st of June next. It has been decided to christen her the Mohawk.—Herald.

—The Clipper Boat Club of Pittsburg will have a new house that will cost \$5,000. It will be made out of the steamer Milner, which has recently been engaged in the trade of the Upper Missouri.

—The yacht Tidal Wave, Commodore Wm. Voorhis, sailed on the 27th December for St. Thomas from Bermuda.

—The Pickwick Boat Club of Hoboken have elected A. M. Hopkins, President; M. Dast, Vice President; H. H. Sierck, Treasurer; J. H. Reekie, Captain; Robert Taylor, Lieutenant.

—The American yacht Josephine, N. Y. Y. C., Captain Phoenix, with Messrs. Talboys and Croker on board, arrived at Barbados from Martinique December 9, remained there one week and sailed December 15 for Trinidad.

—There is now on exhibition at the Rooms of the Maritime Association, 66 Beaver street, a most ingenious invention for detecting a leak in vessels. It is the invention of J. D. Leech, and is worthy of a visit from parties interested in marine matters.

—The Sloop Red Jacket has been added to the Brooklyn Yacht Club.

—An international four-oared race for \$5,000 and the championship of the world is to be arranged between a picked four selected by Bernard Biglin of this city and the English champion four. The English four will probably be J. M. Sadler, Robert Bagnall, Thomas Winslip, and James Lumsden, with Boyd and Taylor for substitute. The Hon. Bernard Biglin will select John Biglin of this city, Thomas Elliott of Greenpoint, L. J. Josh Ward and Hank Ward of Cornwall, N. Y., with Evan Morris of Pittsburg, Pa., for substitute.—Times.

YACHTING IN FLORIDA.—NO. 1.

EDITOR FOREST AND STREAM:—

The December wind is busy to-night driving the snow flakes into many a curling drift, and now and then with mischievous impulse trying to force a few of the dainty missives from the frozen North, under the doors and in at the windows; but the storm only enhances the cheeriness of the glow within, and the bright flames of burning birch wood crackles as merrily as a camp fire, and carries one's mind back to many a bivouac among the forests of Lake Superior, Nova Scotia and Northern New York. But pleasant and varied as these memories of our northern rugged woodland, we will not now jull ourselves with associations of the sighing of the wind in the pines and spruces, but turn to recollections of the sunny land, where the huge palmetto leaves rustle even now to gentle airs, and with swaying moss, and tall, gaunt cypress arms form a scene that has little in common with the outlines of snow that lie far and wide about us.

Fleeing a year ago from the cold, your correspondent found himself steaming rapidly away from one of the long wharves of the lower St. John on a small impetuous little yacht, one of the busy, bustling kind, imbued with the restless spirit that small things usually possess and exhibit, to show that after all is said and done, the world is not so bad.

It was a day for idling, and the rapid puff was not in harmony, so leaning over the small bow Cock that just held a bell and two easy chairs, the order was given to old Paul, the well known pilot, to slow up, and Paul conveyed the same to the engineer, when the sharp ripple at the bow lost its rustle, the engine breathed more comfortably, and with a lazy, lazy wake spreading far behind and the cold river, the laid back in our seats and determined to abandon northern haste and learn laziness in earnest, in fact to do nothing as hard as possible. And the lesson was very easy. The slow drifting clouds, the currentless river, the gentle wind, and all about was peaceful and free from suggestion of haste, and coming fresh from driven clouds and hurrying storms, it was enough to take in sunshine and roses, leaving the cold and the winter past.

The afternoon found us at Palatka, where the ladder was reinforced, ice purchased and a boat obtained. At twilight we pushed on, turning into the narrower and more picturesque channels, where the forest crowded out to the water's edge, and sprays of flowering vines hung far over the flood, lost in vain admiration of their mirrored beauty and grace.

The water was deep even to the shore, and we cut the bends of the stream close under the foliage that rustled with the breeze made by our motion, while views of remarkable beauty opened every moment before us, each in deeper shade and more mysterious beauty as the rapid darkness came on. As later every form on shore was lost in the dense blackness of night, it became a wonder to us how old Paul could thread the devious and narrow channel, but on we sped, only halting to insure that we had not lost the great river boats go by. The huge thing came panting like a Leviathan breathing flame, and with wide open furnaces casting broad bars of light over the water, and rows of colored signal lamps far above the bright cabin windows, she made a striking scene against the night as she sped on, bearing a gay throng of pleasure seekers to the upper river.

We were not anxious, however, to get on. There was a wealth of beauty, by the way, that few on the great stream would see, and after feeling our way for a time, old Paul rang to "stop her." "Back her," and our little boat drifted against a wood wharf, that no one but our pilot could have found with no sign to mark it under the forest blackness, and here tied up to a decayed dock, we did not envy the passengers going to sleep.

For the first time I experienced how there would be a rush for seats, and a scramble for food, and a long cue of tired men and women waiting to learn from a patient purser that there were no more state rooms, no more beds on the floor, and no more blankets for a curl up under the dining tables. We were not at the mercy of negro stewardesses, nor to be snubbed by magnificent waiters; we were as independent as chimney sweeps in a crowd. Your correspondent was admiral of the fleet (sloop and two skiffs), sailed for once, "ho-ho light and midshipmate," and chief of ordinance, (one Scott and one Remington), while Madame was in command of our cabin passengers, (maid and one child), and reigned supreme over a culinary department consisting of two spirit lamps at night and a fire on shore in the day time.

Just at the time we tied up hot tea was singing on one lane, but not soon (thanks to Leitch, the other, and with rolls, deified meats and canned luxuries, there was a good supper laid away, and the events of the day came in pleasant retrospect through the cheering medium of sparkling wine.

At dawn we clambered onto the old wharf. A wood road ran back from it through the forest to a settler's home. Birds were singing gaily, among them our familiar Summer friends; but many strange notes came from the low ground. Following the following seemed to be the sound of an axe, a woodpecker was found, an earlier workman than the lazy crackers. It was one of the large fellows that are sometimes seen on southern trees; as large as a teal duck, a gay handsome bird, with a bill like iron, and a head that enables them to exercise the feat long considered impossible, of sawing wood with a hammer. Ducks, herons, water turkeys, ospreys, and other birds followed the narrow water in their flight, shying above the tree tops as they found us occupying their solitude, and saying hard things of us in their own way, while high up on a venerable espere limb sat several ducks, rather an unusual sight, and there they sat while we made a fire and cooked our breakfast, and only moved off when a ball went very near them.

Nothing can equal this mode of enjoying the southern river. Just as the last of the season, the greatest is seen, but every moment one is hurried ruthlessly away from some spot where there is every temptation to linger, and then left to while away hours at some landing where preceding crowds have gathered every flower, and alarmed every bird with pistols and parasols.

After a leisurely breakfast on shore, as free from care as gypsies, we went on board, put easy chairs on deck, and laid our guns before us, and steamed on through scenes of great beauty and variety, now and then getting a duck which was picked up and enjoyed by our men who cooked them in the furnace under the boiler.

About noon we reached Lake George and found it very rough, but leaving the channel we followed an unusual route through the islands and ventured out, our yacht rolling a good deal, but we soon came under the west shore and found the water smooth. About midday on the shore the wonderful springs that are so beautiful. Leaving the yacht, we poled in a flat skiff over a shallow bar, and up the stream that flows from the spring. It passes through water lilies, and they were swarming with duck and rail, while in the water that was as clear as air were shoals of fish, bass, mullet, long savage looking gar fish and huge catfish. They would not bite, but were easily punched with our oars, and were taken from the water and served up. Half a mile from the lake the stream ended in a curve under a high bank, and here by hard rowing we found the spring, and looked down into a white walled chasm through water that seemed too ethereal to support our skiff. It was a dizzy overlook down into this deep pool, where long weeds writhed and swayed forty or fifty feet below us in the swell of the current, and where shoals of blue fish would sweep out from under rocks and lie swept rapidly about like shadows. The water rose with such force as to make a high boiling current, where skillful rowing could poise a boat, only to slide away with a rapid balloon-like motion that was not at all pleasant. Fine palmettos had surrounded this wonderful pool with a fit and beautiful shade, but they were just then a heap of smouldering ruin, having been taken from the water and laid on the shore, and the water had been taken from the water, and the small clearing. Vandal hands have rarely marred a more weird scene, nor ignorance more surely damaged the value of a rare possession; but so it is in Florida; all hands from the jewelled one that wrote its owner's name in a font at St. Augustine, to the cracker's horny palm, are against the ancient, the curious and the beautiful, and are long and long in the way of the machine and the old walls will fall before want of water, and give way to pine fences as has the old and mysterious "Treasury wall" at St. Augustine. (A disgraceful fact).

Full of regret at the useless loss of these trees we let our boat drift down the stream, startling again the water fowl and the fish. A pale faced cracker boy came alongside in a dug out and tried to put a wild turkey for a price that fell very rapidly, but we left it with him, as he would be cooked over a spirit lamp, or to be safely done by the fireman under the boiler.

Steaming on we found the mouth of the upper St. John, now a narrow river, flowing with some current through dense forest, where new forms of vegetable life abound, and seem to strive to cover over the river with plants that float in miniature islands with the stream, and vines that

reach o it like carpets of green from the leaf-laden shores. The animal life does not abound here as it did a few years ago. Every man and boy on the steamboats does "shooting in Florida" with some arm; pistol, champagne corks, orange tips or rifles, and no bird from the sparrows to the carious buzzard is safe except in the abundance of bad shooting. All are wild, and fit on just out of range, and even the stupid alligator slips from his mud bank after one or two shots.

The tropical character of this noble river is chiefly seen above Lake George. North of this lake the northwest winds, the cold storm winds of the country, pass only over land from the frozen north, and in mid-winter sometimes bring a very unpleasant chill, one that renders orange culture precarious, blighting in some years the new buds; but south of this the winds having a westerly direction pass over more or less of the gulf, and are disarmed by the warmth and moisture of that body of water of their blighting chill and dryness, and about Enterprise snow and frost are practically unknown; palms, palmettos, bananas and orange trees assume forms of vigor that render them very beautiful to the northern eye, and the refuge from Winter finds an assured promise of gentle air and golden sunshine.

The river is very crooked, bending sharply around points, cutting deeply into the banks, forming deep boiling pools, where fish are seen breaking constantly. The shores are usually low; a point ten feet high is known as a bluff, and such are sought by settlers for homes, possessing all the freedom from miasma, insalubrious and dampness that can be expected where the sun of almost perpetual summer breeds during many months a full crop of annoyances. The driest and most desirable places are found upon the shell mounds, where one strata upon another of shells form elevations of very considerable extent. These shell formations are of great interest, and puzzle the keenest minds with their layers of different shells, each distinctly defined in character, and differing in a marked form from that which renders them. The water-worn river banks show long and perfect sections of this character, and the strata are plainly seen in even and distinctly marked lines, not always level, but extending in long, unbroken elevations and depressions; showing that some disturbing upheavals have raised and lowered the deposited shells after they were imbedded in their present order.

Some of the strata, lying perhaps six inches in thickness, are composed of bivalve shells almost exclusively, much crushed and broken, but cemented quite firmly; other strata are without shells of this form, being composed of conical, convolute shells of about one inch on each angular side; but these differ again—in some the shells are fresh, but little broken, and not firmly cemented; in others crushed in fine fragments, and strongly united with the lime made by the partial decomposition. All these varieties may be seen overlying one another in a vertical height of four or five feet, and the different bands of color form lines that are visible as far as the face of the formation is exposed.

Upon these shell lands there are found numerous conical mounds, regular in form, rising from ten to thirty feet, evidently of human origin, supposed to have been, like the pyramids of Egypt, burial places for the distinguished chiefs of some of the ancient nations. The mounds are of arrow heads, axes, and other works of rude art, found in these mounds, are those of the stone age, which on this continent is extended to the present time among some remote Indian tribes; but some of these implements are found imbedded in a conglomerate so firm and stone-like that they convey to the mind of the ethnologist an impression of as remote antiquity as surrounds the bone caves and gravel deposits of France.

A great deal of learning has been exhausted upon these remains; but full examination has not yet been made, and many links in the chain of unwritten history may be supplied when a full comparison of these mounds and the works they contain is made with the corresponding discoveries of the old world.

As the more minute peculiarities of our pre-historic antiquaries are known, it is no time to assume the air of unravellers of the mazes that surrounds the deeply interesting questions of unity or diversity of races; and it is not unlikely that secrets are hidden in the shell mounds of Florida that may, when discovered and interpreted in the broad light of future knowledge, tell many a curious tale of wandering tribes and far-fetched arts and customs.

Half lost in vain theories and surmises aroused by these peculiar remains, the great and good associations of the old world, and our minds given up to the romantic associations of the first voyagers who here sought the fountain of youth, carrying so much of woe and cruelty with them that it is fortunate for the present that they did not find any elixir of the kind; and to the more vague but pleasant fancies of the race that still earlier possessed this alluring land and roamed freely, with no more idea of a coming and overcoming race than occurs to us now in our period of supremacy.

But this is drifting, and we would not be left without anchorage in the realms of speculation. We really went rapidly against the stream, and after a long day of full enjoyment over our craft to a bank, and in our small but snug cabin made pleasant plans for the morrow.

L. W. L.

BISHOP'S CANOE VOYAGE.

NEWBORN, N. C., December 29, 1874.

EDITOR FOREST AND STREAM:

The paper canoe "Maria Theresa" arrived at Newborn three hours after the yacht Julia reached her anchorage ground off that city—the day after Christmas.

When the *Norfolk Landmark* newspaper telegraphed to Judge West that the canoe had left for Currituck Sound via the Albemarle and Chesapeake Canal and North Landing River, our people decided to send out a party to intercept the solitary voyager, and bring him, with his paper craft, up the New River. The canoe was too small to be sighted at a long distance, and not a citizen of Newborn had ever seen the canoe man. J. E. West and a party of gentlemen, expecting to see the canoe for six days, did not expect to see it until after losing the beautiful yacht Julia during a hurricane at Ocracoke Inlet. On the night that the yacht was rolling on the shoals and dragging anchor with cables weighted with iron balls, the paper canoe was safely lodged in the rushes on Dody Island beach.

The yacht was sent out upon a second expedition under Capt. Brown. Another severe gale rose, and the yacht was driven back to the cabin windows under water. Had she reached Hatteras Inlet before the gale broke upon her, she would have been lost without doubt. That night the paper canoe was near the signal officer's quarters at Cape Hatteras Light House. The day after, Mr. Bishop heard from a fisherman of the three hundred miles' cruise of the Julia in search of his fly-eight pound

craft, and finding the wind too strong to cross the shoals of Pamlico in his boat, he walked fourteen miles down the beach to Hatteras Inlet and back again through the sands, but the yacht could not be found. The next day he crossed with the gale, and paddled fourteen miles to Hatteras Inlet, crossed it at one o'clock in safety, and camped in a deserted fisherman's camp five miles south of the inlet. This camp was eleven miles from any habitation southward to Ocracoke Inlet. The next morning by moonlight the canoeist got under way, rowed eleven miles to Ocracoke Inlet, across it five miles to Portsmouth, and reached Capt. Mason's lonely quarters in Cape Fear, from which he reached this city via Morehead City, coming inland from the landing on the cars, accompanied by the canoe.

Eighteen miles from Newborn is a curious landing ground. Little lakes are found in the great swamps, and thousands of wild fowl feed in those retired localities. Deer are numerous on the ridges. There is not, probably, a better hunting ground for the sportsman and the end of Florida. To explore this hunter's paradise, Commodore West has chartered carts to take provisions down to the lakes from the nearest railroad station to the hunting ground. His guest, of the paper canoe, and one or two friends of the Judge will be to-night for the camp. After the hunt is over, Mr. Bishop will continue on through Bogie, Stump, and Masonboro Sounds to Cape Fear.

NEWBORN, N. C., December 30, 1874.

EDITOR FOREST AND STREAM:

I have to acknowledge the receipt of Mr. Harris' favor of the 12th and that of Mr. Hailcock's of the 13th, upon my arrival here from Cape Fear via Beaufort and Morehead City. The trials experienced in crossing the points of the great shoals in Pamlico Sound nearly exhausted my poor stock of patience. I would be two and three miles from land in only twelve miles of water, with the wind blowing freshly, when the canoe would go on a "hump" in six inches of water, the seas would over the low side of the hump, and as long as I could hold the water enough for rowing purposes, and headway could be kept upon the boat, I did not have much trouble. Having heard that the yacht Julia was cruising for me, I made every effort to get as far south as Ocracoke Inlet, but two severe storms and fresh northers, as well as southerly winds, made old Pamlico too rough for traveling upon with my open canoe. I have reached Newborn, and have received much kind attention from the people. Editors from the interior have called to examine the paper boat. I have not yet met, out of hundreds of oystermen, fishermen and sailors, who have examined the canoe, one person who dares to get into her and row across a creek; yet I can travel, with about one hundred pounds of baggage, across every inlet (as I have done) from Cape Hatteras to this latitude, not excepting Hatteras and Ocracoke. It is only the idea presented by my visitors that the paper is the best thing that should be put into the water, that makes them afraid of this beautiful design of Rev. Baden Powell, elaborated and made durable by the genius and patience of Waters, of Troy. I am a novice at rowing. When I received my canoe at the builder's hands on the waters of the Hudson, at Troy, young Waters showed me how to handle the oar correctly. My experience has been gathered in sailing the paper boat, and I also have been in this rowing of small boats, and am a stranger to the drill and discipline of floating organizations, can get on so well in these rough waters, how much better could the trained oarsman do the same work? We are to examine an interesting hunting ground near Newborn, a description of which I will send you as soon I reach my next post office, at Smithville, Cape Fear. Very truly yours,

N. H. Bisson.

Rational Pastimes.

—*Bel's Life*, of Dec. 19th, has an article on "Base Ball in America," containing the proceedings of the Championship Committee in awarding the pennant to the Boston Club. They give the record in full of games won and lost, so it seems that they regard the game as worthy of regular place in their columns.

—Chapman has succeeded from the Captaincy of the Atlantic nine, and accepted a position as Lieutenant and right field in the St. Louis nine, where he is to help Graffen in the business of the club, and assist Pearce in the field.

—Old Charley Pabor is to Captain the Atlantic nine in place of Chapman. Barlow will catch, Rossman pitch, Crane, Patterson and Nichols play the bases, Kessler short-stop, and Booth, Pabor and Clark play the out-field. All Brooklyn players.

—The White Stocking Club of Deering, Maine, champion juniors of that State, won ten games and lost four during 1874. Their best game was their 10 to 2 match with the Mountaineers of Portland. Bodge, Fish and Mansley led the score at the bat.

—A co-operative firm of selected local experts is to be started in St. Louis to rival the stock company imported team. The make is a good one.

—New Haven is to have a professional club to be known as the Elm City Club. They are to knock spots out of the Hartford crew. So Arnold says.

—Skating was lively on New Year's day at all the metropolitan resorts; even Prospect Park being opened to the public for the first time this season on that day.

—The Ice Boat Club of Brooklyn launched their craft at the Capitoline Lake on Jan. 5th. Next week a race is to take place between Mr. Decker's Fly Away, Capt. Hailcock's "Nondescript," and Mr. Chadwick's Lady of the Lake. Ten times round the lake for the pennant will be the course and the prize.

—Speaking of tenpins, a correspondent says: "You see, while a man chooses a ball he can handle with a graceful swing of his right arm, the girls are bound to select the biggest one they can dig. 'Toing' it to the starting place, they go on a writhing run half way down the alley, and then let go their burden with a spiteful shove, give a sigh of relief, straighten up and walk back with a dignified and unconcerned air, as if they didn't care where that ball went or whether it knocked down any pins or not."

—The New Jersey Athletic Association will offer valuable gold medals and the title of amateur champion to the winners of the one-mile and the 100-yard races, which are to be contested next May. There has been much rivalry among the amateur walkers of the New York and New Jersey clubs. D. M. Sargent is the champion of the former, and his record of a mile in seven minutes is the best in America.

—A ten-mile walking match for the amateur championship took place at Franklin Park, Boston, last week, between J. P. Bruce and Frank White. Bruce walked the ten miles in one hour and forty-two minutes, defeating his antagonist by about a mile.

—The Tecumseh Base Ball Club of Dunnville, Ont., Canada, won five games and lost three during 1874. Their nine included Cunningham, Smith, Smithers, Price, Hiselet, Bickell, Ainsden, Samsby and McDonald. The Tecumseh won the 15 to 13 match with the Maple Leaf Club of Jarvis.

—J. M. Holman, a member of the Philadelphia Univer-

sity Barge Club, aged seventeen years, walked fifty miles in twelve consecutive hours in Philadelphia, last week. This is certainly good walking for a lad of his age.

CORNELL UNIVERSITY, December 31, 1874.

EDITOR FOREST AND STREAM:

I noticed in your issue of the 17th a communication from Yale College, signed "K." I wish to make a correction. It is Cornell University that the Yale Chess Club is playing with and not Cornell College. The latter college is located somewhere in Iowa, I believe. With the assurance of most Yale men, he takes it for granted that they are to vanquish us, and hopes that Cornell will act differently from Williams, and not back out when almost beaten, or words to that effect. I think a little more consideration on the part of "K." would not hurt him. A Philadel.

—Columbia College has followed the lead of Harvard and organized a rifle club. It is hoped that an intercollegiate rifle match will take place at an early day.

Billiards.

THE FOUR-HANDED MATCH.—The loose way in which matches are made and announced is illustrated in the case of the match said to have been made up and forfeit deposited, in which Rudolph and Vignaux were to have played Garner and Daly. Vignaux, in a card to the *Clipper*, says: "I will not play in such a match. I think a little more consideration on the part of Mr. Daly separately, and for my own part no matter how large; the game to be played on a table of H. W. Collender's manufacture, furnished with his combination cushion."

—The billiard event of last week was the defeat of Joe Dion by Vignaux at Tammany Hall on Dec. 30th. Vignaux marking his play by the splendid run of 192, and another of 116. The summary is as follows: Tammany Hall, N. Y. City, Dec. 30th, 1874. Match announced for \$500 in cash and championship of America. Maurice Vignaux, 600; Joseph Dion, 538. Averages—Vignaux, 12.24-48; Dion, 11.10-48. Best runs—Vignaux, 192; Daly, 64. Referee, John T. Reeves. Umpires—for Vignaux, Isadore Gayrand; for Dion, George T. Stone. Marker, R. E. Wilmarth.

THE BROOKLYN PROFESSIONAL TOURNEY.—On Monday, Jan. 4th, the Deane Brothers, of Brooklyn, inaugurated a tournament at their rooms, corner of Fulton avenue and Smith street, which was arranged for the purpose of affording the Brooklyn people an opportunity of witnessing the play of the most noted of the professionals of the country, in a series of exhibition contests together. The weather on the first night was bad; but the attendance was such as to crowd the hall. Seats were reserved for ladies, but none were present during the match. The first contestants were Rudolph and Daly. They began play in a match of 300 points up at the French house, the result of the contest being the success of Daly by a score of 300 to 253. Daly's best run was 121, and next best 72. Up to the twenty-second innings he did not score double figures, Rudolph leading at that time by 184 to 49. Then came the 121 run, and shortly after that of 72, and this gave him the lead. Rudolph's best run was 60. The winner's average was but 9.21; very poor for an exhibition match. On Tuesday Joe Dion and Gardner were to play. On Monday after the game, Rudolph gave an exhibition of "fancy" shots, which quite astonished the crowd. This is the first time he has played in Brooklyn for some years.

Chess.

CHESS DIRECTORY.

Chess Player's Headquarters—Café International, 254 Bowersy. Chess, Up-Town—Knickerbocker Cottage, 467 Sixth avenue. Down-Town Chess Club—Cafe Cosmopolitan, 15 Second avenue. Jersey Hall Chess Club—Cafe Cosmopolitan, 15 Second avenue. Brooklyn Chess Club—Mercantile Library, Montague street. New York Chess Club—No. 81 Montgomery street. Croton and Balke's Chess Club—No. 100 Montgomery street. New Brighton Chess Club—At Capt. Taylor's, Tompkinsville. Christian Union Chess Rooms—Fulton avenue, opp. Elm pl., Bklyn.

THE CAPE TOURNEY.—Mr. Mason, who thus far leads the score in the tourney still in progress at the Cafe International, appears to be over anxious to handle that fifty dollar prize which he is so near winning, judging from the columns of *Wilkes' Spirit*. It will be time enough to talk about awarding the prize and closing the tourney when he has played and won all his games with his adversaries. He has yet to play D. Barnett and Mr. Perin, and some six chess other players. Thus far he leads; Delmar being second and Albion third. Mr. Todd finished up all his games in three weeks, and yet he only played evenings. Why cannot the others do likewise?

THE BROOKLYN TOURNEY.—Dr. Barnett and Messrs. Spence, Homer and Thayer still have the best record in the club tourney.

THE CHRISTIAN UNION ROOMS.—These rooms are occupied by several noted experts of Brooklyn during the afternoons, prominent among them are Messrs. Thompson and Doctor Alfred.

THE BRITISH CHESS ASSOCIATION CHAMPIONSHIP.—The contest between Messrs. Wisker and McDonald, the great English players, is still the principal topic of interest in chess circles. The *London Field*, in its comments on the play in the match, says: "Compared with other matches, and remembering that a slight shade of difference in strength, often arising only from a difference in the state of health, has sometimes been sufficient to decide by much larger majorities the issue between two players of nearly equal force, we may call this match a very close one, and chess circles have been perhaps closer still had Mr. McDonald been in good form. That there was a considerable falling off in the latter gentleman's play became more manifest in the ending game, which used to be considered his great force. On several occasions, when his strong powers of resource and patience had carried him out of the opening and middle part of the game (of which his opponent possesses a profound knowledge) with an advantage which, analytically, ought to have been sufficient to win, his faculties of calculation seemed to fail him at the last moment, when victory did not depend so much upon judgment as upon accuracy of reckoning. On the whole the games were, however, fair specimens of well-contested match games between high-class players, and reflected a great amount of credit upon the winner, who exhibited the same superior qualities of endurance, depth and judgment which distinguished his play in the competition for the championship of the British Chess Association, of which he was the conquering hero twice in succession.

—At the second annual meeting of the Clanderboye Snow Shoe club, of Halifax Nova Scotia, the following officers were elected for the ensuing year: C. P. Bickell, President; A. D. Thompson, Vice President; H. J. LeMesurier, Secretary; F. M. Duggan, Treasurer. Managing Committee, W. J. Fraser, J. P. Stafford, J. Crawford, A. A. Brocklesby and Joseph Duggan. It was decided that the nights for tramping should be Friday, to commence as soon as there is sufficient snow.

—A meeting was held on the 22d ult., in Toronto, for the purpose of organizing an Ontario Branch of the Royal Caledonia Club of Scotland. Lord Dufferin was elected Patron; Mr. Peter Gow, Guelph, President; Mr. Joseph Stovel, Toronto, and Mr. George C. Ward, Port Hope, Vice-Presidents; Rev. Dr. Barclay, Toronto, Chaplain; Mr. D. Walker, Secretary-Treasurer.

SPENCER GRANGE, SILVER, 1

ORNITHOS.

The Goshen Park Association arranged the programme for two colts stake to be trotted next Summer. The first is for foals of 1872, \$100 subscription, \$50 at the time of nomination and \$50 on the first day of August, when all shall become payable or pay, mile heats, best time in five; the association to add \$200, two-thirds of the entire purse and stake to go to the winner, two-thirds of the balance to the second horse, and one-third to the third horse; to name and close on March 1, 1875, five or more to file.

To make up the same conditions for four-year-olds, foals of 1871; \$250 added to the purse, best three in five; to name and close same day as the three-year-old stakes five or more to file; to be trotted at the fall

MAGAZINES

The Popular Science Monthly. (New York: D. Appleton & Co.) for January, has two papers of great value to the student of chemistry and general science. We read with careful interest, and were well rewarded for the perusal, "Christianistic and Molecular Forces," by Tynall, and the "Future of Chemistry," by Prof. F. W. Clarke. The first, although upon a dry subject, has what we believe to be the element of true teaching, and the manner in which this subject is handled is such that the student of chemistry, whether he be a teacher of school or lecture room have the ability to interest those of the youngest capacity upon simple subjects. "The Future of Chemistry" is a paper of such value that the entire number is unsurpassed by any of its predecessors in the highest class of scientific knowledge.

ILLUSTRATED NATURAL HISTORY.—The following testimony to the truthfulness and beauty of "Hurst's Views," merely supplements the expressed opinion of many of our readers, who delight in the field of practical natural history. The views are taken from mounted specimens in life-like attitudes, with a landscape in exact imitation of the native haunt of the bird or animal. We refer to the advertising columns of the FOREST AND STREAM for list of views and prices.

SHAKOPEE MUSE. December 20 1874.

All housekeepers and others who desire to make their homes or apartments wear the appearance of elegance should call on Mr. Bendall, 112 Fulton street, and select a handsome carpet for about one third its real worth. The stock embraces all sorts of carpets for parlors, sitting rooms, libraries, chambers, dining rooms, and stairs; also a large invoice of oil cloths.

CIAL EYES,

Prize List!

FOREST AND STREAM,

A Weekly Journal,

DEVOTED TO

Out-door Sports

Hunting, Fishing, Yachting, Boating, Practical Natural History, Fish Culture, &c. &c.

It is the OFFICIAL ORGAN of

The Fish Culturists' Association of America.

The Publishers of FOREST AND STREAM

In order to stimulate the development of

MANLY AND ATHLETIC EXERCISES,

AS OF

FISHING, SHOOTING, ARCHERY, CRICKET, FOOTBALL, AND CROQUET.

Offer the following prizes for clubs of three or more subscribers.

Single Subscription per Annum \$5

Hunting Clubs.—Agents, and others interested, are advised that we do not insist upon their starting with full clubs to receive our prizes. They can send three or more at a time, and on forwarding the requisite number within 60 days will be entitled to same premium as if all were sent together.

CRICKET.

For \$20 00, four copies, one year, with one best spring bat, one College bat, one Dark cricket ball, price \$2 50.

For \$25 00, five copies, one year, with a complete cricket set, one College bat, one polished bat, Clapshaw, one Dark cricket ball, one set of "runner" balls, price \$12 00.

FOOTBALL.

For \$15 00, three copies, one year, with one Rugby outfit, price \$8 00.

FISHING RODS.

For \$15 00, three copies, one year, with one superior Joint Light rod, suitable for all kinds of fishing, price \$7 00.

For \$50 00, twelve copies, one elegant rod; suitable for trout, black bass with fly, or for trolling bass or pickerel, or line a rod as can be made; German silver tipped, with three tips; price \$25 00.

CROQUET.

For \$20 00, four copies, one year, with very handsome set of croquet; price \$7 00.

For \$25 00, five copies, one year, with superb set of croquet; price \$10 00.

For \$30 00, six copies, one year, with the finest set of croquet made; price \$14 00.

TABLE CROQUET.

For \$10, two copies one year, with handsome set of Table Croquet, 5 balls and 5 mallets, in wooden box. This game can be played on dining room or other tables.

For \$15, three copies one year, with the handsome set of Table Croquet manufactured, made of cocco.

REMINGTON RIFLE AND SHOT GUN.

For \$75 00, fifteen copies, one year, with one Remington Rifle; price \$28 00.

For \$100, twenty copies, one year, with one Target Rifle; much actual target, to be used for sporting, hunting, or target shooting; price \$26 00.

For \$100, twenty copies, one year, with one Remington double barreled, long landing shotgun, one of the best guns ever offered to American sportsmen; price \$45 00.

SHARPE RIFLE.

For \$100, twenty copies, one year, with one Sharpe sporting or target rifle, best quality; price \$30 00.

WARD-BURTON RIFLE.

For \$200, forty copies, one year, with one Ward-Burton rifle magazine gun for large game, price \$50 00.

SINGLE AND DOUBLE BARREL MUZZLE LOADING SHOT GUNS.

For \$20 00, four copies, one year, with one American single barrel gun, perfectly safe, blue barrels, walnut; price \$10 00.

For \$25 00, seven copies, one year, with one American double barrel gun; handy and reliable gun every way; price \$12 00.

For \$50 00, ten copies, one year, with one double barrel twin barrel gun; a safe gun every way for large game; price \$20 00.

For \$75 00, fifteen copies, one year, with double gun, English finished steel barrels, handsome finish; price \$35 00.

CASH PREMIUMS.

To those who prefer cash premiums a discount of 25 per cent. will be made on all clubs of three and upwards.

Every article is of the finest quality and will be sent free of expense.

Remitting Money.—Checks on New York City banks and bankers are best for large sums; make payable to the order of FOREST AND STREAM PUBLISHING COMPANY, 17 CHATHAM STREET, NEW YORK. Post Office Money Orders for \$500 or less are cheap and safe also. When these are not obtainable, register letters, all kinds stamps for postage and registry; but in the money and send the letter in the presence of the postmaster, and take his receipt for it.

Send the names with the money as fast as obtained, that subscribers may get the paper at once.

POST OFFICE BOX 2332,

STEREO SCOPIC

Natural History

For Object Teaching in Schools, AND PARLOR ENTERTAINMENT.

We are prepared to furnish the first sixty numbers of the first series of

Animals and Birds of North America.

To these will be added a second series of foreign specimens, and various Animals and Birds in grotesque attitudes, never before violating their natural instincts.

We offer these views not as pictures only, but as studies from nature. One of the great moving elements in our modern system of education is object teaching. The uttering fidelity of the stereoscopic transfers the animals and birds from their natural habitat to the room of the student, and the first of our homes, where they cannot fail to leave a lasting impression of the form, color, habits, and locality of each species.

An experience of more than twenty-five years as Trustmaster of the New York State Cabinet of Natural History, and in gathering his large collection of native and foreign specimens, enables Mr. Hurst to combine in every view the locality of the specimen with the appropriate rocks, woods or water, and coloring from the originals.

1. Wild Cat, or Bay Lynx..... Lynx rufus.
2. Snowy Owl..... *Nyctaleus nyctaleus*.
3. American Wolf..... *Lupus americanus*.
4. Wild Pigeon..... *Columba virginiana*.
5. Northern Parula..... *Parula parula*.
6. Black Crowned Night Heron..... *Ardea discolor*.
7. Woodchuck..... *Arctomys monax*.
8. Red Squirrel..... *Sciurus hudsonicus*.
9. Great Blue Heron..... *Ardea herodias*.
10. American Swan..... *Cygnus americanus*.
11. Red Scaled Diver..... *Colaptes auratus*.
12. American Woodcock..... *Bonaparte minor*.
13. White Fronted Goose..... *Anser albifrons*.
14. Ring Necked Pheasant..... *Phasianus torquatus*.
15. Hooded Merganser..... *Mergus americanus*.
16. Horned Grebe..... *Pelecanus cornutus*.
17. Golden Eagle..... *Haliaeetus leucocephalus*.
18. Prairie Wolf..... *Canis latrans*.
19. Spotted Sand Lark..... *Tringa macularia*.
20. Marsh Wren..... *Agelaius phoeniceus*.
21. Mallard Duck..... *Anas boschas*.
22. Great Horned Owl..... *Bubo virginianus*.
23. Red Tailed Hawk..... *Bubo virginianus*.
24. American Deer (Albino)..... *Cervus virginianus*.

TESTIMONIALS.

CORNELL UNIVERSITY, ITHACA, N. Y., March 18th, 1870. I must congratulate you upon your great success in this new educational enterprise. If we can arrange our arrangements so as to make them improve the mind, it will be a step in advance in education.

EZRA CORNELL.

WASHINGTON, D. C., March 12th, 1870. I am much pleased with the success you have met with in giving to the stuffed specimens a very decided appearance of life.

I hope you may be able to continue the Series, and I have no doubt but that the means of information and instruction in regard to the wild animals of New York.

SPENCER F. BAIRD.

STATE HOUSE, BOSTON, Mass., March 18th, 1870. I have examined carefully the "Stereoscopic Studies of Natural History," and judge that the illustrations, being, should say that they will prove of very great value both as object lessons for students and as a most interesting and instructive series of pictures. The delineations, position, and color of the different groups and the general treatment are most perfect. I cordially commend them to the public attention, and trust you will meet the encouragement which you have earned.

EDWARD A. SAMUEL.

Curator of Zoology in Mass. State Cabinet.

PEABODY ACADEMY OF SCIENCE, SALEM, Mass., March 18th, 1870. I have shown your Stereoscopic views to the Directors of the Academy and the editors of the American Acad. and Mr. Peabody. They are all very much pleased.

They concur with me in praising their truthfulness and the taste which have been displayed in surrounding the specimens with natural objects and scenery of characteristic fitness. They are certainly better fitted, not only as parlor and drawing room illustrations, but as educational illustrations for the use of schools and colleges, than anything we have yet seen.

CORNELL UNIVERSITY, PRESIDENT'S OFFICE, ITHACA, March 18th, 1870. I have received the Stereoscopic Views of objects in Natural History, and have enjoyed them greatly.

They have surprised all who have seen them by their wonderful fidelity, both as regards the animals and their surroundings, and I judge they are not far from being of great service to the study of Natural History, first by attracting students to it, and next by perfecting them in it.

ANDREW J. WHITE.

It is manufactured from the most expensive leaf;
is particularly adapted to Meerschaum and Cigarette
Smoking; gives no bite or make the tongue sore, is
unlike any other tobacco.

VIENNA, AUSTRIA, Nov. 30, 1875.

Messrs. Wm. S. Kimball & Co.:

SIR:—A friend of mine sent you, with a transport
of Indian tobacco, two pieces of "Vanilla Fair," which I declare
to be the best tobacco I ever smoked. We have very good
tobacco in Vienna—Turkish and Hungarian, but "Vanilla Fair"
is the King of all, by its aromatic flavor and the right sort of
strength. My friend in New York got an appointment in
California, he left tobacco I supplied him with, begging
you to send me for the remainder of a supply of "Vanilla
Fair," and to send me the same excellent "Vanilla Fair," I
beg you to deliver me the address.

THE ROARING KILL.

Far up in the forest glen,
Where the fathery sweet ferns grow,
Mossy nook, whose charms I ken,
Whence the gurgling fountains flow,
Elfin chamber, perfumed still,
Birth-place of the "Roaring Kill."

Cloud wreaths veil the mountain's head,
Tickle down his shaggy beard,
Mingling dew drops, gently spread,
From each defile, cool and weird,
Bubbling, tinkling, many a rill;
Wayward, roaming, "Roaring Kill."

Blendid rills, to music sweet
Ripple 'neath the wildwood shade,
Mark the hours, with flying feet,
Through the sunshine-dappled glade,
Nodding trees, on either hill,
Greet the bonnie "Roaring Kill."

Like misshapen giants old,
Sturdy boulders guard the way,
These the rising flood enfold,
Crested o'er with pearly spray.
Free born, naught can stay its will,
Fleet and strong the "Roaring Kill."

Smooth it glides by meadows green,
Spangles o'er the pebbly trend,
Slips the tangled roots between,
Where the light-plumed willows bend
Past the busy, clattering mill,
Leaps the buoyant, "Roaring Kill."

Of its full grown beauty chary,
Loiters now with hidden face,
Till the dusky hued Scobarie
Clasps it in a glad embrace.
Glossy biddings, softly trill,
Love songs to the "Roaring Kill."

T. W. A.

Across Newfoundland.

INTERIOR EXPLORATIONS—FLORA,
FAUNA, AND GEOLOGICAL FORMA-
TION.

[Continued from January 7th.]

CHAPTER III.

GEESSE (*Anas Canadensis*), and ducks, the black duck (*Anas boschas*), are met with in great numbers in the interior, the ducks in particular in the central parts of the island. There, remote from man, they breed undisturbed on the edges and islands of the ponds and lakes. The geese moult soon after their arrival in the Spring; and, owing to the loss of their pinion feathers, are unable to fly during the Summer or breeding seasons; but they can then run faster than a man on the marshes, and if surprised at, or near a pond, they will plunge in and remain under water with their bills only above the surface to permit of breathing, until the enemy has passed by. They feed on berries—preferring that of the *Empetrum nigrum*, and the seeds of grasses. Both the old and young become enabled to fly in September; and as soon after that as the frost affects the berries and causes the seeds of the grasses on the marshes and savannas to fall to the earth, or otherwise when the snow falls and covers the ground, they collect in flocks—and fly off to the Southern shores of the island and from thence to the Gulf of St. Lawrence. They remain there until December, and then assembled, take flight in immense flocks to the southern parts of America, to return in the Spring. The ducks do not quit the interior for the sea coast so early as the geese; that is, not until the pools and ponds in which they obtain their food are frozen over, and they are the last of the birds of passage seen here! Loons of two species breed in the interior, almost every lake, as observed, nearer to the sea coast, being occupied during the Summer season by a pair of them. Likewise the common sea-gull, early in the Spring, which fly off to the sea in July and August. Curlews breed on the barren hills;

snipes, (jack,) a kind of godwit (called yellow legs,) and bitterns on the marshes; but the first had now all gone to the sea coast. The red-breasted thrush, (*Turdus migratorius*), breed in the scanty woods, near to where berries abound; they fly off in flocks to the coast in September, and from thence to the more southern countries. There are several species of hawks and owls here; of the former genus, one species was very small.

The rivers and lakes abound with trout of three or four kinds, differing in size and color. In one of the source branches of Gander River which we crossed, we caught some small fish, apparently salmon fry. A species of fish larger than the trout is said by the Indians to be found in several of the large lakes.

We were nearly a month in passing over one savanna after another. In the interval there are several low granitic beds, stretching as the savannas, northerly and southerly. During this time we shot only a few deer, but many geese, ducks, and beavers, which, with trout, constituted our principal food. When we had no game to subsist on, the killing of which, although certain, was irregular, we subsisted on berries, which some spots produced in prodigal abundance. I longed for bread for about ten days after our stock was consumed, but after that did not miss it.

When we met deer in a herd, we seldom failed in shooting the fattest. The venison was excellent; the fat upon the haunches of some of them was two inches in thickness. We shot them with ball or swan shot, according to distance. The leading stag of a herd is generally the fattest, he is as tall as a horse, and must sometimes be shot at full speed, sometimes by surprise. The ball having pierced him, he bounds, gallops, canters, faults, stands, and tosses his antlers; his sinewy limbs quiver, unwillingly bend, and he stretches out his graceful corpse. Should the ball have passed through his heart, he falls at once, probably balanced on all fours. There is regret as well as triumph felt in taking possession of the noble vanquished; the broad spreading hoofs of the deer are admirably formed for preventing their sinking into the marshes. A single deer on the plain, when there are no others near to give the alarm, may be approached and knocked down by a blow on the head with an axe or tomahawk from a dexterous hunter. We happened to see a solitary stag amusing himself by rubbing his antlers against a larch tree on a plain; my Indian, treading lightly, approached him from behind, and struck him on the head with his axe, but did not knock him down; he of course galloped off. The flesh of the beaver is by the Indians esteemed the finest of all quadrupeds of the chase, and that of the young beaver justly so—in taste it is more like lamb than any other meat. In butchering it, with the skin is flayed off the lining of fat, which is sometimes two inches thick round the body. Beavers are commonly shot on the water; they seldom come out of their houses by day, but are abroad all night; before sunrise the hunter posts himself undiscovered as near as possible to the leeward side of their house, the beavers at that time come out, one following another; directly any of their heads appear above the water, it is fired at either with ball or shot, and sometimes a whole family is thus killed in succession; if any escape, their return to their house is watched before sunrise next morning in like manner as their departure was in the evening—their bodies float to the shore. The black duck shot in the interior remote from the sea, is the finest bird for the table in Newfoundland. The trout are easily caught in the rivulets in the interior, they being so unacquainted with enemies as to take the artificial fly merely by holding out the line in the hand without a rod. No country in the world can afford finer sport than the interior of this island in the months of August and September. The beasts of the chase are of a large class, and the cover for all game excellent.

The waters which we crossed contributed something to the rivers of the north, and sometimes to those of the south side of the island. We occasionally crossed some of the large lakes on rafts when our course lay across them and the wind happened to be fair, and there appeared nothing to induce us to go round their extremities. We

accomplished this by fastening together three or four trunks of trees: with withes, and held up a thick bush for a sail, and were blown over. There was, of course, considerable risk to our accoutrements attending this primitive mode of navigation. The proportion of water to land in the savanna country is very great. In some directions northward one half seems to be lakes, of every size and form; in other directions, one third, and seldom less. The marbled, glossy surface, as it appeared from the rising ground, was singularly novel and picturesque.

In some of the forests, strips of the trees are all borne down in the same direction—that to the earth—by wind, and the havoc displayed is awful. Such parts were almost impassable; the way through the woods elsewhere, except by the deer paths, is obstructed by wind-fallen trees and brushwood. There are extensive districts remarkable for abundance of berries towards the centre of the island, which attract great numbers of black bears. The paths or beats of these animals throughout their feeding grounds are stamped with marks of antiquity seemingly coeval with the country. The points of rocks that happen to project in their way are perfectly polished from having been continually trodden and rubbed. Although we had seen fresh tracks of wolves every day, and were sometimes within a few yards of them in the thickets, yet we only caught a glimpse of one of them. They lie in wait among the bushes and listen for the approach of deer, and rush upon them. When they saw man instead of deer, they immediately fled. There are two kinds of wolves here—one large, that prowls singly or in couples; another small, sometimes met with in packs.

Taking a general view of the mineralogy of the savanna territory, the rocks of the savannas are granite quartz and chlorite greenstone—the same as already noticed—mica, chlorite, and transition clay slates. The granite is pink and grey, and sienitic. It throws itself in low beds lying northerly and southerly, higher than the savannas, and also appears with the greenstone and slate rocks at the edges of the lakes and other water courses. It occurs of a globular structure on the verge of the savanna country westward of that branch of Clode Sound River which we crossed. The balls are round, and vary in size from a few inches to a fathom and upwards in diameter. In the whole of this savanna territory which forms the eastern central portion of the interior, there rises but one mountain, which is a solitary peak or pap of granite, standing very conspicuous about forty-five miles north from the mouth of the west Salmon River of Fortune Bay on the south coast. It served as an object by which to check our course and distance for about two weeks. I named it Mount Sylvester, the name of my Indian. The bed of granite, of which Mount Sylvester is a part, is exposed in a remarkable manner to the northeast of that pap near Gower Lake. Here are displayed the features of the summit of an immense mountain mass, as if just peeping above the earth; huge blocks of red, pink, and gray granite—often very coarse grained, and of quartz—but compact and granular, lie in cumulous and confused heaps, over which we had to climb, leap, slide, and creep. They sometimes lie in fantastical positions, and upon an enormous mass of gray granite may be seen, as if balanced on a small point of contact, another huge mass of red granite more durable in quality, and thus crowned by a third boulder. Their equilibrium invites the beholder to press his shoulder to them to convince him of his feebleness. These masses seem to be the remaining modules of strata or beds that once existed here; the more perishable parts having long since crumbled and disappeared, thus evincing the power of time. Quartz rock, both granular and compact, the latter sometimes rose colored, occurs, associated with granite. On the summit of a low, bristly ridge, formed principally of granular quartz, nearly half way across the island, are two large masses of granular quartz, standing apart at the bottom and nearly meeting at top; seen at a distance from the north or south, they have the appearance of one mass with a hole through it. Hence, this spot is called Rock Hole by the Indians. Plates of mica, six inches and up-

merit in knocking them over, for they acted as if the sole object of their life was to be killed.

As we drove up to the house our guide made his appearance, and in a moment we were mounted and on our way to the mountain. The "mountain" consisted of a long chain of volcanic formation, strikingly resembling the Palisades on the North River, only of about twice the height. At a distance of about a mile from the chain the ground commences to rise abruptly, the hill being composed of the debris, which, in the course of ages, the elements have brought down from the mountain. These foot hills are intersected by gorges washed out by the rain, upon the sides of which the growth of trees, in whose branches the guide informed us the turkeys were to be found.

Dismounting at the foot of the hill we detached our *riatas* from the saddle bows and picketed the horses, and after twenty minutes careful and severe climbing, Kaluna, the guide, arrested us by a quick motion of his finger and pointed out a line of dark objects in a tree about sixty rods away. Now directing Walton and myself to take our ground with extreme caution at a spot he pointed out, and await his signal, he disappeared in the long grass and we crawled up to the place indicated, which brought us within a hundred yards of the birds without attracting their attention. In an incredibly short space of time we heard a shout from the other side of the tree and in an instant the whole flock was on the wing and flying in our direction. We were just counting on three when they wheeled and sped down the wind at right angles. Walton's rifle and my left barrel made but a single report and we had the satisfaction of seeing two of them drop at the word. I let off my other barrel after them. They seemed to hear it, but not one of the four fliers stopped to see what was the matter. Walton's bird was dead, with a hole through his head, but that was a scratch; mine would have died soon but I didn't give him a chance. By the time we had re-loaded, Kaluna was alongside and we started again, marking the birds.

A similar maneuver at the next tree brought us in three victims, and as the guide came up, we noticed a look of more interest on his face, which was soon accounted for by the appearance of some goats high up on the mountain side. These did not interest me as much as the turkeys, but Walton said he thought he'd go and get one, and in about half an hour I saw him at a dizzy height above me and he appeared to be pulling down from a pine goat which stood out beautifully against the sky on a perfectly level lookout for the herd out of sight behind him. Presently we heard the crack of Walton's piece and had the satisfaction of seeing señor goat fall into an inaccessible ravine between two perpendicular spurs of the chain. While our friend was down the guide and I bagged another turkey, and after his arrival we added four more to the score.

Here we rested and Kaluna went back after the horses while Walton and I rested on our laurels. When the guide returned with the ponies, we proceeded at a leisurely gait towards the house, securing the birds to our saddles as we picked them up.

When we arrived at the rancho we found it occupied by a large party of Russians from the corvette *Haydianka*, but of the Russians and the *tsaun* and the *hala* and Billy Emerson, I shall relate the tale at another time. W. W. F.

For Forest and Stream.

A FORTNIGHT IN THE WILDERNESS.

BEING THE JOURNAL OF A PARTY THAT SPENT TWO PLEASANT WEEKS IN THE SUMMER OF 1873 IN EATING, SLEEPING, ROLLICKING, AND TROUT FISHING IN THE WILDERNESS OF NORTHERN NEW YORK, TO THE GREAT BENEFIT OF THEIR PHYSICAL BEING, AND WITHOUT HARM TO THEIR SOULS, OR INTERFERENCE WITH THE RIGHTS OR ENJOYMENTS OF THEIR FELLOW MEN.

[Concluded from January 7th.]

SATURDAY, July 25th.—Shortly before noon the deer came in from Big Rock Lake. They had no deer, though they had been faithfully waiting for them, and Big Rock is esteemed good floating ground; but for some reason the deer would not stand to our lights. Perhaps they had heard our music, and were affected by it the same way the wolves were. The boys were charmed with the beauty of the lake, and came in laden with the spoils of the outlet, in which they had found fine fishing. After dinner, Shack Nobby Ned, with the pack of provisions, bread, maple syrup, and a huge segment of new made cheese, from which we had several dainty "Welsh rarebits," skillfully prepared by the hand of our able first assistant cook. Our gastronomic pervers, by no means deficient when we came into the woods, were gaining new energies daily, and this reinforcement of our provisions stood most welcome. The band had a "promenade concert" to-night, in honor of the addition of a new member, Frank French's hound Tige, which had doubtless heard our music of the preceding night, and had come over the mountain for an engagement. His howl being a fine bass, he was assigned a place without an instrument. This new vocal feature was voted an improvement, as our instruments, especially the "cross cut," were mostly set on the shore.

Sunday, July 26th.—There is one home habit—not a good one—that we bring to the woods: that is, of rising late on Sunday mornings. It was seven ere we had breakfast; but as there was no church or Sunday school to attend, the public was not harmed by our tardiness. After breakfast, we all had a grand bath in the deep, clear, still water a few rods from our camp. Then we took a second reading of our newspapers. It being Sunday, and having had our morning meal late, we decided to have but two full meals that day, and in the interval to lunch on what might be eatable without cooking. It was a rash resolve, and if it had been persisted in for a week day or two, would have bankrupted our stock of provisions. Sandy Charley especially dependent, capacities as a luncher which gained him the champion's belt ere he had finished his fifth lunch

within the first hour. Our chief cook, who had betaken himself to a morning snooze, woke in alarm as he heard the crunching of raw Bermudas and the grinding of crackers, and seeing how things were likely to go made haste to get a regular menu. The ham which had been slung in the pot since breakfast was stimulated to a boil by a fresh handful of chips, the potatoes and succotash were put on to cook, the trout rolled in meal and salt ready to fry, and all the available space about the huge camp fire was filled with kettles, saucepans, and other implements of cookery. By this masterly movement was the raid of the lunchers quelled. The huge dinner disposed of, there was no more call for lunches that day, and forewarned by the day's danger the order was issued at evening meal: "three square meals each day hereafter, and no more lunches."

Monday, July 27th.—Two of the party to-day started for Snag Lake, which at times affords lively trout fishing, but is principally celebrated for its bull heads—what the New Englanders call "bull pouts"—a fish similar to cat fish, not as large, but of better quality. Then taken from the clear, cold waters of these northern lakes they are but little inferior in flavor to the speckled trout. The boys took the rifle with them, thinking it might be a handy thing to have in case a deer or bear should put in an appearance. The dog Tige started off on a rabbit hunt on his own hook. Others of the party went out on the stream to fish. Before noon Farrell and Giles came in from their exploring trip from the deeper wilderness. They reported the discovery of some fair basins full of dressin' out of a lake a hundred or more acres in area, flowing into Indian River (another tributary of the north branch), in which they found trout in abundance, and of weight averaging half a pound and upwards. The lake, like all others in this wilderness which abound with speckled trout, is shallow, and the bottom of dark ooze. The trout are gamey, but not equal in flavor to those we get on this stream.

Farrell and Giles had a light basket full of dressin' out, packed in moss, with which, after dinner, they proceeded to the settlement. At four o'clock the boys came in from Snag Lake with a basket full of bull heads, the skinning of which furnished active occupation to the whole party till supper time, when the bull heads disappeared altogether, carrying with them a heavy draft of bacon, eggs, bread, Bermudas, and coffee. The best meal yet. The rifle had no more success in its quest except upon a lion, and with the usual success. The tail of the lion was seen to go under water about the time the bullet left the gun.

Tuesday, July 28th.—There is little worth recording of to-day's proceedings, except it be the astonishing performances of the boys at the trencher. The 250 pounds of solid provisions we brought into the woods, with the scores of pounds of trout we have caught, are melting away like the morning mist, and as the stock grows lower they are again raised. The rapid reduction of the stock of provisions suggests to the boys the necessity of an earlier departure for home than we desired. In the hope, therefore, of conserving the staple supplies of food, a volunteer foraging party start for Big Rock, in the hope of having better luck at floating than their comrades had last week. Hunky Jim takes the pack of provisions, Shack Nobby Ned the roll of blankets, while Steamboat Frank, who is scarce four feet in height, but all pluck, wades up the stream neck deep, holding the gun over his head to keep the powder dry. It is next to impossible to travel on the banks of the stream, as there is an alder swamp on one side and a succession of almost impassable wind falls on the other. We give the boys a parting cheer, and earnestly wish them luck on our own account as well as theirs.

Wednesday, July 29th.—The party at the home camp fish the Metcalf with fair success. Our raids the past week have told somewhat on the resident population of the stream; but the supply is still equal to the demand. In the afternoon the Big Rock party return. Failing to get venison at the lake, they bent their steps down the mountain four miles to Becraft's, and coming thence to camp they returned to the party, and when we were informed they brought a further reinforcement of bread, cheese, butter, and other eatables, by means of which we were enabled to keep the wolf from our door a day or two longer.

Thursday, July 30th.—This being our last day in camp, we resolved to spend it diligently in fishing, so that we might have a basket empty of fresh caught trout to take out with us. The first day's catch was good, and which we did not neglect to keep our fish nice till we reached home. The party divided, part going up stream and part down, and some going further on than others, so as to make available the whole fishing ground. Capt. Jack waded up stream in the morning. He went past the first stillwater, through a long rapid to the next stillwater, a short one, and to another rapid above. At the second stillwater he discovered a considerable shoal coming in from the north, which he believed to be the outlet of a chain of small lakes, which he proposes to explore on a future trip. His success in fishing was not equal to what it had been on previous days, and so, after coming into camp about noon, he "enslaved the rule" and took a lunch, after which he went far down the stream among the big rocks, and came in at night tired, but with his day's work accomplished. We had a fair supply of beautiful trout, and as the day was the last day in camp the party fed on the provisions without mercy. Such a supper, and such feeders! Nothing like them has been seen since the days of the giants. But this wild life in the pure air had case-hardened our elastic stomachs, and no nightmare followed our repelition.

Friday, July 31st.—There were six eggs a piece left in our hen's nest, and enough Bermudas for a big fry. Bacon and onions, fried eggs, flap jacks with pure molasses, a Welsh rarebit, and a cheese and onion pie, with excellent coffee, and the remains of our bag of crackers to crumble in it—the savorage of these in our capacious stomachs was the provision we made for the day's march out of the wilderness. We needed no extra packmen to help us. Our load was oppressive from bulk rather than from weight. It was nearly noon before all the packs were arranged for the start. Our tramp to Snag Lake was up a steep ascending trail, and though our loads were lighter than when we came in, the march was harder. At Snag Lake we stopped to take another shot at the loon. He was a fair mark this time, not over 300 feet distant. Smut Face, who bore the rifle, took good aim and blazed away. The gun kicked strangely, and something like a stick struck the lake far ahead of where the loon went down. The sportsman had shot away his ramrod, and that ended the day's gunning. When we got to Wilmett the castle

was shut, the warden away, and the big boat on which we depended for crossing was anchored half a mile out in the lake. The expertness of Steamboat Frank, however, speedily relieved us of our dilemma. Quicker than we can tell it, he had thrown off his clothes and was striking out boldly for the boat. He swam to it, rowed it to the shore, and we were across with all our luggage in less than half an hour. Making a pile on the south bank, of our baggage, which we covered with our ponchos, and left for Becraft to come for with his wagon, we made straight down the hill for Becraft's and dinner! The dinner was not long delayed. If there is one thing which Mrs. Becraft does better than getting breakfast, it is getting dinner, and there are many who think that at supper she does best of all; but these are men just out of the woods, or just going in, after a long day's ride, and of course they are no judges. If we were Mrs. Becraft, we would rest our claim to culinary honors on the dinner she set before us this day. It had all the material that is requisite to make up a good dinner, and it had more beside. Nice roast mountain lamb, potatoes white as the pure snow, bread that any housekeeper might envy, raspberries fresh from the wild bushes, with cream, having the flavor of the white clover on it, coffee as clear as the ruby wine, cakes, pies, and maple syrup, a strawberry short cake of mammoth dimensions and of tea berry lightness, vegetables fresh from the fertile garden; this was the feast to which we were invited; and we did justice to it. Mrs. Becraft has seen men eat before whose appetites have been keyed up for two weeks by the mountain air, and the lively exercise of wood camps, so she was not astonished at our feast; but if any hotel man in the cities had seen such performances at his table he would have called police, cried fire, made his will, gone into bankruptcy, or done some other desperate act. "The best yet."

Dinner over at last, inspection duty took place of our clothes, which were in a sad plight on account of the numerous holes made by sticks and stones in our shoes, trousers, and shirts. Being once more within the pale of civilized life, we wash off the war paint and the rough coating of dirt, put on the clean shirts we have held in reserve, sew up, after man's clumsy fashion, the rents in our trousers, and then take an afternoon's lie down on the green grass. We are Modocs no longer.

Saturday, August 1st.—The morning broke lowering. Perhaps it was the same rain we had encountered going in, and which baffled in its attempts to hinder us then, but it waited for our coming out to pay its best respects. At any rate, it was prepared for us, and so we prepared for it. With a good lining of breakfast inside, and a covering of ponchos outside, we took our seats in the wagons provided, and bade adieu to the hospitable hotel de Becraft. Before going three miles, the storm burst on us in force, with fierce thunders and sharp lightnings. But what are these to a party who for two weeks have been clothing themselves with robust health as with a waterproof garment, and whose hearts are light with the anticipation of soon meeting loved ones at home. Before the rain began to fall, the boys had struck up a merry refrain, and when the floods descended their voices grew more joyous, and, with the thunder for chorus, they accomplished some vocal performances, aided by the horn, which would have put even the grand opera to its rout. The thunder makes no more prolongation of the chorus to "Old Aunt Jemima-o-oh!" and the boys kept it up as long as the thunder did. It kept on raining, alternately pouring, all the way to Prospect, into which place we came rolling at one o'clock, the mud flying from our wagon wheels like sparks from a Roman candle. We were somewhat wet notwithstanding the protection of our ponchos, but, as we were hungry. The rain, leaving us no further opportunity to molest us, stopped, as it usually does under such circumstances.

Prospect is a good place for hungry men to reach about dinner time. Our hotel keeper's name is Meal-us—Bob Mealus, or "Old Bob, Meal-us," as he is beseechingly called by the hungry sometimes. Why he is called "Bob" no man knows, unless it is because his name is Lorenzo; but the reason for his surname is apparent. He keeps a good house, and they want to come again, and in the summer weather the hungry of all climes, even from the far off cities of New York and Brooklyn, where the denizens of the great hotels have every day to stare famine out of countenance, attracted by the fame of his generous table flock to his hospitality in such numbers that he has every year to enlarge it. Of course the dinner is good, and he is attentive to the occasion, the most careful whether there is another hotel in the settlements that could have furnished one that would have been. The condition of quality might have been attained, perhaps; but with us, whose appetites had been for two weeks whetting in the mountain air, and whose animal spirits were correspondingly healthy, quantity alone could satisfy, and it took a good deal of even that to satisfy us. But Mealus knew this, and was adequate to the occasion. At four o'clock had reached that haven of rest. And here our journey and our journal end. R. U. SHERMAN.

TWO MARVELOUS FLOWERS.—The *Horticulturist* gives an account of two novelties among flowers which it is almost tempted to treat as fables until their verity is established by personal inspection. The following is the description of them:—

"One is a black lily in Santa Clara, California, with three large blossoms, each nine inches long, and perfectly black outside of the green petals. The other is to be seen at Constantinople, and described by an eye witness as belonging to the narcissus genus of bulbs. The flower represents a perfect humming bird. The blossom is bright red, and the petals are of a deep red color. The bird, and the throat, head, back, and eyes are perfect imitations. The hinder part of the body, and two outstretched wings, are of a bright rose color, one might almost say flesh colored. These wonderful bulbs should have been sent to the Vienna exhibition. They will be in abundance by the time of our Centennial celebration in 1876. And yet they can hardly be greater curiosities than the strange and mysterious *Amorita* flower from South America, with its life-long representation of doves."

—The athletic entertainment at Wood's Gymnasium last Saturday evening was quite interesting. Col. Monstery's fencing with the foil was the acme of graceful, quiet perfection, while his opponent, Mr. Englehardt, showed also that he had a quick eye and promptitude in escaping thrusts.

Fish Culture.

This Journal is the Official Organ of the Fish Culturists' Association.

PROF. BAIRD'S REPORT.

COMPARATIVE VALUE OF ANADROMOUS AND OTHER FISHES.

In reference to the fresh water fishes most worthy to attract the attention of the General Government or of the States, the distinction between resident species and those that are anadromous, or which spend a part only of their life in the fresh waters and remainder in the ocean, must be clearly borne in mind. The species which belong exclusively to fresh water, such as the brook trout, the lake trout, the land locked salmon, the whitefish, the black bass, &c., are well worthy of attention, and by judicious treatment can be introduced into new waters, or their numbers greatly increased in any particular locality. But, after all, there is a direct relationship between the number of any kind of fish of a given weight and the amount of water needed to furnish a supply sufficient to add definitely to that weight of food; and when the limit has been reached, we cannot, without feeding artificially, add more to the proportion. Where the water is pure and constantly renewed, and a suitable supply of healthful food is furnished regularly, large numbers of fish may be kept and cultivated, where not one in ten thousand would find an ample supply of natural food, but, as a general rule, the expense of feeding is such as to render the sale at comparatively high prices necessary for a satisfactory result.

It must be remembered, too, that however rapidly certain fish, especially the young of the salmon, multiply in new waters, there is a limitation to their increase, as shown by the experience of the Potomac River. This fish was introduced into this stream in 1854 by Mr. William Shriver, of Wheeling; several mature fish having been transported in the water tank of a locomotive from the Ohio River, at Wheeling, to Cumberland on the Potomac. Not many years after, the young fish began to distribute themselves in numbers, and in time they were everywhere, extending their life toward the mouth of the Potomac, until at the present time they are found in great abundance near Washington, and form a very attractive object of sport.

I am, however, informed by residents on the Upper Potomac and its tributaries that the bass are becoming scarce, and that their numbers are much less than a few years ago, while, as a concomitant, the immense schools of smaller fry, formerly so abundant, have disappeared, a minor in some localities being a rare sight. This is a very natural consequence, and must produce its result. In the increasing scarcity of herbivorous fish, the bass will be driven to feed more and more upon each other, and after a time a certain average will be established, perhaps the same as that existing in the waters of the Mississippi Valley and elsewhere, where, although indigenous, they are in proportion fewer than in the Potomac River.

An entirely different condition of things prevails with the anadromous fish, among which we may enumerate as best known the shad, the alewife, or the fresh water herring, the salmon, the smelt, and probably the striped bass. These fish spend the greater part of their existence in, and derive their chief growth from, the sea. At certain seasons of the year, when fat and plump, they enter the rivers and proceed usually as far as the obstructions will permit, or until they find their proper spawning ground; here the eggs are discharged, fertilized, and hatched. The adults either return immediately to the ocean or after a certain interval. The young fish spend a certain period in the fresh waters, feeding, it is true, but on minute organisms, which are always procurable in abundance.

Shad and herring enter the rivers and spawn in the Spring, and the young return in the Autumn. The eastern salmon enter the rivers in Spring, and spawn in the Autumn, the eggs not hatching until late in the Winter. The young remain for one and some of them even for two years, and then go down to the sea. After a certain interval these fish return to their birth place, the shad, at the age of three or four years, weighing from three to five pounds; the salmon after the same interval, weighing from nine to twelve pounds; this immensely rapid growth having taken place in the ocean, and without requiring anything in the way of human intervention. For this reason it is that the efforts necessary to the multiplication of anadromous fish may be limited to securing a proper passage of the adults to and from their proper spawning grounds, or, in addition, to the securing of their eggs in numbers, and placing the young when hatched, and after a suitable interval, in the water where they are to pass the period of their infancy. Nothing, therefore, is asked of the waters but the right of way, the adults rarely taking food of any kind while in the rivers. Their sustenance during this period is derived from the surplus of fat in their own bodies, and the exhaustion produced by this period of abstinence, especially with its accompaniment of the development of the eggs and their fertilization, being made up by the voracity of their feeding on returning to the ocean.

The species just mentioned live in the ocean and run up into fresh water to spawn; the list being capable of considerable addition. Other fishes, again, live in large bodies of fresh water, as lakes, and run into tributary streams or outlets for a similar purpose, and are thus anadromous likewise. The *Caregonus* or whitefish, are almost universally anadromous; also the landlocked salmon, the quassa trout, or blue-back, the fresh water smelt, &c.

In this connection it may be interesting to refer for a moment to the difference in habits between the common eel and the species just referred to. This, like the others, is an anadromous fish, or better, perhaps, catadromous, the order of its movements being reversed. The eggs of eels, for the most part, are laid in the sea, and the young, after a short interval, enter the mouths of rivers and streams in early Summer and pass up as far as an open passage will permit. The adult catadromous eels, on the other hand, enter the water sheet of the Niagara Falls, as struck as much by the immense number of young eels swarming against

the rocks and attempting to climb over their surface as by any other feature, the numbers to be seen being simply incalculable.

After reaching a suitable place of abode, in fresh water, the eels remain, as is supposed, for at least three years, growing to a considerable size. After becoming sufficiently mature, their instinct, probably that of reproduction, carries them seaward again during the Autumn; and it is at this time that various forms of fish dams and fish weirs are called into requisition. The simplest kind consists of two lines of stone wall, forming the sides of a rude dam, made so as to converge and bring the angle down stream, through which the passing water falls into a sort of basket. This consists of a frame with lattice work at the bottom, so arranged that, while the water passes through, the fish are forced up over the slats, and so form a series of slides, and fall into a receptacle beyond, where they are taken sometimes by wagon loads. The most productive result of this mode of fishing consists of eels intercepted in their seaward movement, although other fish are often taken. It is very destructive to young shad and is very properly interdicted by the laws of Pennsylvania and New Jersey, in their shad rivers.

The laying of the eggs, it is supposed, takes place in the Autumn, or Winter, and the young begin to move up in the Spring, or early Summer.

In further reference to the history of the eel, we may state that its precise mode of copulation and of reproduction was entirely unknown until recently, but that at the present time the view is maintained by very high authority, principally that of Italian physiologists, that the eel is strictly a hermaphrodite, that is, that both the male and female organs are found in the same animal. These are said to be developed to the proper degree in Winter, and the eggs discharged from the ovary fertilized by the seminal fluid from the testicles, and leave the body in a condition for further development.

TEXAS RIVERS FOR STOCKING.

GAINEVILLE, Cook Co., Texas, January 1, 1875.

EDITOR FOREST AND STREAM:—I see from the columns of your paper that a consignment of fish (first-shoot salmon) has been made by the U. S. Fish Commissioner to S. W. Texas, and in both cases it seems that they were for the Brazos and Colorado Rivers. I should like to know if Northern Texas is not entitled to a portion of the appropriation? If fresh water is necessary for salmon, we of the Trinity and Red Rivers are far ahead of the Brazos River in that line. Very respectfully, G. H. HARRIS.

—The first Penobscot salmon of the season was received by Shattuck & Jones, 129 Faneuil Hall market, Boston, on the 18th ult. It weighed twenty pounds, and was sold to the St. James Hotel at a dollar and a half a pound—a pretty good price for hard times!

We see this item in a Boston paper, but no comment on the violation of the law regulating the close season, which is from November 1st to April 1st in the State of Maine.

Natural History.

For Forest and Stream.

THE MOA.—*Dinornis robustus*.

ONLY a few years ago paleontologists, and scientific men in general, were aroused by the rumor of a new discovery, one calculated to tax our "belief in wonders" to the utmost, and to wipe away the slurs of discredit cast upon the founders of those tales of the heroic days in which the *Kor* figured so prominently and to such good purpose. And not unlike this light of other days is our quasi new discovery, a huge giant bird towering far above the tallest living creature and vying with many even in strength. It has been found more plentifully in New Zealand than elsewhere, and the numerous traditions that are familiar to the natives and told to the traveler, tend to throw a glamour of mystery and romance around this epic of greatness that makes the subject of more than passing interest. Incredible were the stories told concerning them, and every fresh discovery would be the sign for some new tale that would be suddenly remembered by the natives. They also believed that these huge birds had lived within their own memory, and that still in the far interior they roamed in hordes, safe in their own strength and the unapproachable character of their retreat. They knew it as the *Mo*, and remembered that its superb plumage was worn as a gala dress by their ancient kings, and that the bones were eagerly sought after for implements of various kinds. For long years their stories were laughed at by casual visitors, and not until the visit of Rev. William Colenso was any belief placed in these strange rumors. His curiosity, however, being aroused, he made the attempt, and after great labor excavated three or four specimens of this wonderful bird, which were followed by the important discoveries of Rev. W. Williams, the results of which were published at that time in the *Tasmanian Journal*, (1842,) and republished at great length in the "Annals of Natural History," and up to the year 1846 numbers of small discoveries were made that seemed like the sun and veins of ore that gradually bring the miner nearer and nearer to the fountain head of splendor; and thus the interest was kept up by the small finds of Muckell, Earl and Wakefield, until 1846, when Mr. Walter Mantell drew aside, as it were, the veil of the past and these huge actors of a by-gone age appeared rearing their pillars of bone-like monuments to perpetuate their memory into all time. Mr. Mantell resided in Wellington for several years, and penetrated the interior with the sole purpose of obtaining, if possible, a live specimen of the huge bird, so much spoken of by the natives, and while prosecuting his search he made a magnificent collection of its remains, amounting to over eight hundred bones of this and other species. From the position of some of these bones, the shank and legs being found standing erect, and just protruding from the soil, it is evident that like the mastodon and several other huge forms, they were covered by the soil and held by a grasp that only released its hold when all but the semblance of their power had passed away. The location of these ossiferous deposits is described as follows in the notes of Mr. Mantell:—"Near

Waikonaui, seventeen miles north of Otago, there is a head land called Island Point, about three quarters of a mile in length and 150 feet high; it consists of sandy clay distinctly stratified and traversed by dykes of columnar trap, the columns being at right angles to the side of the veins. In a little bight south of Island Point, on the side of the bar which unites that headland to the mainland, at the entrance of the river Waikonaui, in front of the native Kaika, named Makukui, is situated the so-called tertiary deposit, whence bones of moas and other birds of various kinds have been obtained in such number and perfection. This bed is about three feet in depth and not more than a hundred yards in length, and lies immediately on a stratum of blue clay. Its inland boundary is obscured by vegetation, and appears to be of very limited extent; the bed is submerged and only visible when the tide recedes. It consists almost wholly of decayed vegetable matter and its surface is studded with the undisturbed roots of small trees, which appear to have been burnt to the ground at some remote period. It is a light, sandy, elastic earth of a blackish-brown color and emits a strong, fetid odor when first collected, from the large quantity of animal matter it contains. I conceive it was originally a swamp, or *noy* as in which the N. E. (flax, and *tearu*), once grew luxuriantly. It is now covered by a thin layer of sand when exposed at low water." This, then, is the tomb of this by-gone race. Years before they probably frequented the low lands in droves, and perhaps fleeing from some still larger form, sought security on the marshes, and there huddled together they sank, their very limbs dragging them down, and each tremendous struggle only enlarging the grave that was to preserve them and perpetuate into future ages the wonders of "primeval greatness."

Speaking of his excavations on the west shore of the North Island and about sixty miles southwest of New Plymouth, Mr. M. says:—"Between the two bluffs near the embouchure of the river there is a sand flat about 200 yards across, and this on my first visit was strewn with the bones of (near) moas and other birds, and two species of seals. I had some deep openings made near the foot of the ancient cliff, on the top of which is the Pa, or native village of Ohawetukoko; and at the same level as the flat on which I had observed the strewn fragments of bones, I came to a regular ossiferous deposit. The bones, however perfect, were as soft and plastic as putty, so that if grasped strongly they changed as it were by magic into clay pipe, and it was necessary to dig them up with great care, and expose them to the air and sun to dry before they could be packed and removed."

The finding of human remains among them tends to show that some of the wonderful traditions were founded on fact, and in the immediate vicinity of the sand flat at Te Rangatope, M. Mantell found circular beds of ashes that contained ancient bones of several animals as well as those of man and the moa, and near them were dug up portions of obsidian, flint, fishing lines, stones and a shale bone. Some of the moa bones were cut with the evident intention of securing the marrow, and these facts, with many others, one of which is, that the name of the bird is used in many of their old songs, points to the truth of the belief that they were well known to the natives who first appeared on the island, 600 years ago. And if other proof were wanting, mound upon mound was opened and found to contain masses of bones of the moa and man charred and burnt and thrown together, the remains of some barbaric feast, but that not only shows that the two were contemporaneous, but that cannibalism evidently prevailed among them, and Dr. Mantell says:—"In case 15 of the British Museum are fragments of a human clavicle, radius and some phalangeal bones, lower jaw, teeth and other bones of dogs and some pieces of moa bones. These relics, which have manifestly been subjected to the action of fire, contained no traces of the earthly powder or frugulous imprints so constant in the fossil bones from the fluvial deposits, nor of the menarche with which all the bones from the sand beds are more or less permeated."

And from the same spot egg shells were taken charred and bent out of shape by the action of heat. Some of the eggs found were of wonderful size, and near Waikonaui numbers of eggs were discovered by Mr. M., the largest being four inches in diameter, showing it to be much larger than that of the ostrich.

In a report to the French Academie des Sciences, M. Isidore Geoffroy St. Hilaire, describes three enormous fossil eggs from Madagascar, and some bones belonging to the same bird.

The Captain of a merchant vessel, trading in Madagascar, one day observed a native using for domestic purposes a vase which much resembled an egg, and upon examination it proved to be one. The native stated many such were to be found in the interior of the island, and eventually procured the eggs and bones exhibited by M. St. Hilaire. The largest of these eggs is equal in bulk to 135 hen's eggs and will hold two gallons of water, and a sign from the gastronomic reader, a slight remark that he did not fearish in the good order of these monster eggs. At the present time no perfect specimens are possessed in the United States, beyond the fragment of bone or indifferent cast brought home by the interested traveler, but this want in our scientific midst will soon be remedied by the prompt and energetic action of the Museum of Natural History, as they have succeeded in purchasing at great expense over sixteen specimens of the gigantic ostrich, representing several species in its perfect condition, which are now on their way from New Zealand, and will soon grace the halls of the new building west of the Park. Photographs of them can now be seen at the Museum, and the sight is almost beyond belief, some of them towering eighteen and nineteen feet above the ground and supported by huge masses of bone that seem more like pillars than the columns of support that they are. Beside them the ostrich, so long a terror of birds, as regards size, sinks in our estimation, and the thought is forced upon us that we are in the epoch of a great change, and, as slowly and surely as did these grand forms die away, so are we destined to change, and perhaps in the great future shall be represented by a race as totally different from the present, as the pigmy descendants of the moa are to their more formidable fathers. C. F. HOLDER.

—We published a paragraph recently, announcing the killing of a doe of the common deer, with large antlers, in Canada. A correspondent in Montreal writes us that his guide on one occasion informed him that he had shot a doe having one prong jutting from the middle of the forehead, near the apex, almost similar to that which we see in pic-

EUCALYPTUS GLOBULUS.

OUR attention was first called to the investigation of this so-called wonderful production of Nature by the receipt of a letter from a reader of FOREST AND STREAM, asking if the facts announced in a number of the New York Herald of last October could be depended upon as reliable information. Not wishing to give our sanction or approval to anything bearing upon the special department of this journal, we withheld our opinion until such time as we felt we could give our many readers all information appertaining to the growth, culture, and value of this tree. In a former article we briefly answered three or four queries concerning it, and since then we have come into possession of the following history of this tree, which has been placed before our readers for thought and investigation. Of late there have been many varied and wonderful stories told concerning this so-called gum tree. It is found growing to a great height in Australia, California, and other places upon the Pacific coast. If we were to believe even some of the wonders attributed to it, we should be credulous indeed. It is a most wonderful purifier of the atmosphere, says one account. No malaria can exist where it grows, says another, while a third one says one or two of these trees will suck a swamp dry, so great are its powers of absorption.

Now this would be truly wonderful were it only a reliable statement; and as a fact connected with agriculture and sanitary progress, a most invaluable discovery for the prevention of disease.

We have not the least doubt of the healing properties of the *Eucalyptus globulus* being great and valuable, and hope, as it becomes better and more truthfully known, that we shall be able to place much of the unwritten history of this tree before our readers.

Desiring to make a full test of the value of this tree, the French government has caused it to be planted to a considerable extent in Algeria. They are now growing well, and with promise of future good. They are also growing quite well in the Cape of Good Hope, in some portions of Spain, and in several other places. We have taken much pains to secure valuable correspondence from these places, and our readers may be assured that all the reliable information we may receive upon this interesting subject will be communicated to them at an early date.

While we believe that this tree possesses great healing powers, yet we think its powers of absorption greatly overrated. That it attains a height of 200 feet, and a circumference of fifty feet, we think not an error. When, however, we are told that one tree takes up in its capillary circulation ten times its own weight of water in a day, we shall be pardoned if we prefer to await further information and investigation before we tell our readers this as a sober fact. An article we saw in an English paper says that the dried leaves of this tree are of great value, and that a decoction made from them is superior to quinine.

Now we deduct about twenty per cent from these newspaper facts, and strike something of a sensible balance in favor of the virtues and highly medicinal value of this wonderful production of Nature, and are satisfied with the result. We are in possession of many wonderful statements concerning this tree, which we shall verify or prove false in due course of time, and the result of which searches we shall at the earliest moment place before the many readers of FOREST AND STREAM. Our Northern friends may rest assured of one fact—it will be found utterly impossible to grow this medicinal tree in nearly if not all of our States.

OLLIPPOO QUILL.

NEW YORK, January, 1875.

EDITOR FOREST AND STREAM:—

Observing in last week's FOREST AND STREAM a communication from your scholarly contributor, "Ollipoo Quill," regarding this tree, it has occurred to me that a short description of my own experience, and in confirmation of his remark, might not be interesting. Some years since while purchasing rather extensively in San Jose and San Francisco, I noticed in the nurseries' establishments a number of seedlings of the *Eucalyptus*, or as it is generally termed in California, the Australian Gum Tree. Attracted more by the desire for variety than any knowledge of the species, I bought a number and had them shipped to Los Angeles. For some time after their arrival no business of other matters prevented me from setting them out, and when I did so, it was with little hope of preserving them. The roots, however, had been well protected, and to my astonishment, the following year my little seedlings had become tall saplings. In three years two of them had attained a height of over thirty feet, with a proportionate diameter, and by this time they have so overtopped the orange trees that the indigenous ones as to have become landmarks for the country around. It so happened that one of the trees had been planted at the upper end of a row of orange trees, consequently at each irrigation of the oranges, its roots were well moistened. The companion tree was just across the road, and not wishing to ditch through this, the tree was left to take its chances. The result was that the tree which had received the water grew to head, making it top-heavy and inclining. The other, on the contrary, while attaining equal height and girth, was perfectly symmetrical and conical, thus demonstrating their adaptability for a dry climate. During the second and third years of their growth there was scarcely rain fall sufficient in Southern California to ripen grain, and one of these trees furnished for nine months a drop of water. It is not to be wondered at, however, when we consider that they are indigenous to the arid and almost waterless plains of Central Australia. It is this reason, I imagine, which prevents their successful production in Florida, which country is, in all probability, too wet for them. They seem to revel in drought, like the cactus, of which the pads made their fence when water was too valuable to be applied to hedge growth. With regard to the orange trees, I would say that at San Gabriel, on one occasion as late as March, we had a frost, sudden and unexpected, which killed my dear cherished pineapple, bananas, and coconut palms, and the succeeding year ice formed half an inch thick, killing to the ground the yearling orange trees, but not affecting those that had formed their hard bark, or the gum trees. As soon as things began to thaw, I noticed that the orange trees were topped, the orange trees threw out no branches on that side, and no subsequent attempt to transplant one of these trees was ever successful. The seed is now grown in immense quantities in California, and the seedlings, which are easily removed with the earth ball on the roots, can be purchased for a dollar or two per hundred.

Trusting that I have not presumed upon your contributor's propensities, and hoping to hear from him "scientifically," regarding this new immigrant, I am, Yours truly,

W. M. T.

—A MONSTER SALMON.—Some time ago I was looking through the "Annals of the Four Masters," a well known book of references on early Irish history, when I came across the following entry under the year A. D. 1144:—"A salmon was caught at Chain-Me-Nois this year, and was twelve feet in length, twelve hands in breadth without legs, spines, and three hands and two fingers was the length of the fin of its neck."—*Land and Water*.

The Kennel.

THE DACHSHUND.

We give this week a full length portrait of the Dachshund, of which so much has recently been written. He is not a handsome fellow, but he has an honest physiognomy, and they say that the uglier his "mug" the better he attends to business.

Of this peculiar breed of dogs, Caractacus, an authority on kennel matters, says that they were formerly used almost entirely for hunting the badger, but are now employed in Germany and France in a similar manner to rabbit hounds. As an auxiliary to the gun, they are particularly suited to the dense forests of Germany and France, where a sure nose and a slow foot take a higher place in the sportsman's consideration than a fleet foot and indifferent power of scent.

The dachshund in external appearance is certainly one of

Every hound over ten inches at the shoulder ought to be rejected. The Germans are only beginning to understand what a thoroughbred dog is, and any traveler who announces his wish to possess a dachshund in certain parts of Germany can have almost any number of mongrels at an hour's notice, and many such are imported; but the thoroughbred hound is almost as rare abroad as in England, and is on the Continent becoming scarcer every day.

The dachshund is sometimes said to be a delicate dog, and the extermination by disease of some very large packs in Germany within the last twenty years affords some ground for such an opinion. In this country, however, they seem to be as hardy as most breeds, except that, in spite of their very thick short coats, they are subject to rheumatism. If, however, when they come in wet from a swim, or on a rainy day, they can be rubbed over at once, this will give very little trouble.

Our readers will feel with us their indebtedness to Herr

THE BADGER HOUND, DACHSHUND, OR BASSET.

the most extraordinary of all the known varieties of the *canis familiaris*, and if it is taken up and made anything like so fashionable a hobby as the fox-terrier, the mastiff, or the pug, there is no telling to what lengths of canine extravagance or distortion he may not arrive. In appearance this hound looks like a strange admixture of the terrier, the bloodhound, the bull dog, and the beagle, but, strange to say, he does not show much likeness to either.

Like most other breed of dogs, the head is the chief consideration. It must be long, straight, and narrow down to the muzzle, but should run rather broader at the end of the snout; flows moderate, ears medium in size, thin, soft in texture, set on low, and falling close to the cheek, but set rather square in front, barrel round and cloddy; body long, and back slightly arched. The neck should be thick, and the eyes neither too large nor too small. After the head, the most important properties lie in the legs and feet, which are crooked as rams' horns; indeed, it is no easy matter to describe the standard of excellence on this point. It will be noticed that they are exceedingly big in bone, out at elbows, in at knees, and the muscles well developed. We cannot say that we think these crooked legs a beauty in any breed. *En contraire*, we consider it an exaggerated deformity originating from rickets, that is now fixed in the breed, like the short face of the pug or the pendulous ears of the hound; but so it is, and as we find him so must we speak of him. His color is generally an exceedingly brilliant black-and-tan, but some capital red specimens are shown at times. The coat is of much greater importance, however, than color, and cannot be too short, soft, or bright. The average weight of these curious little hounds is sixteen pounds, bitches rather less; and the height ten to eleven inches; while the chest is little more than the length of a "snipe's nose" from the ground.

Another English writer says their popularity is not to be wondered at, when we consider that from their great strength, small size, keen nose, and cleverness, they can be, and are, used by sportsmen in England for almost every field sport. They are seldom required to draw a badger or fox, but I am informed one unearthened badger not long ago near Bedford which had beaten several fox-terriers. A sportsman wrote to me the other day he used them with pleasure for shooting snipe, pheasant, and partridge. They have been taught to retrieve successfully, their fine noses and muscular jaws more than counterbalancing their small size. But, I believe, they will be found most useful, as beagles. In spite of their low stature, they get over the ground at a fair pace, and hardly ever have a check.

On the other hand, they are good dogs as ladies' pets. They are very good-tempered unless provoked, have skins as sweet as pugs, and will learn as many tricks as poodles. The history of the breed can be definitely traced to the sixteenth century, but it is probably that a search in MSS. would carry it farther back still. The dachshund of 1500, as far as we can gather from the engravings of the time, was a heavier dog than those exhibited now, with a head that on the very low body looks tremendous, and long ears.

Fr. Von Ivernois, the editor of the *Gohlis-Leipsig Waidmann*, for his very disinterested offer and generous concession, (contained in the subjoined letter) in facilitating the importation and purchase of this peculiar breed of dogs by American sportsmen. We quote:—

GOHLIS-LEIPSIG, December 7, 1874.

EDITOR FOREST AND STREAM:—

Allow me to inform you that the article about the dachshund (not dachshund, as your printer composed) interested me very much, as I am myself very fond of these dogs, and possess several of them. As you required addresses of gentlemen possessing such dogs, I will be glad to give you any desirable information, or to provide such dogs for you or any of your subscribers who might want some. The price will be about twenty dollars apiece, from Leipzig, and of course the further expense will fall to the gentlemen who want them. It would not at all be difficult to find somebody who would undertake to bring them over to America. For instance, I am sure that Mr. Isenbeck, in Hamburg, or a sportsman, would undertake the transport. Perhaps you will have somebody who will take care of them during the voyage. I would send you only capital dogs, and should want only to know if you prefer pretty dogs, or dogs which are known as very useful in digging out foxes and badgers, as very often the ugliest dogs are the best. If any of your subscribers reflect about my offer, he can be sure to get what he wants, as I would not undertake it for the sake of profit, but especially for the interest which I have in America, in which country I have many relatives, in the American sports, and your esteem for paper in particular. I remain, dear Sir, yours very truly,

FR. VON IVERNOIS.

ANOTHER CHALLENGE.—Mr. E. W. Hope, of La Grange, Missouri, is now in the field with another challenge, in order to prove the superiority or training of his breed of setters, which are reputed to be fine animals. He offers to test his pair of liver and white English setters against any matched brace of the setter of any breed in the country, on condition that the animals are tried on pinnated grouse and quail; the trial to come off on or after the first of November, 1875. Mr. Hope's dogs are only house broken, and have not yet pointed a bird, as they are only eight and a half months old. Setters competing with them must be of the same age, or within one month of it. Persons wishing to accept the challenge can write to him for details. As Mr. Hope expresses a desire to take his dogs to any State where birds are plentiful, it should be an easy matter to arrange for a friendly contest. Those who have the best strains of blooded animals should not hesitate to accept the gauntlet thrown down in so general a manner.

FITS CAUSED BY IMPROPER FEEDING.—Fits, when the dog is not suffering from an attack of the distemper, can be almost always attributed to a too great allowance of stimulating food and a want of exercise while the animal is young. We too often see setters and pointers reared in cities suffering from these attacks brought on by improper diet and a lack of daily liberty. The fits generally occur on the dog being taken out for a walk after he has been kept in the stable or chained to his kennel for several days, his food being flesh, or in a great part animal matter. Carried away by his spirits the freedom is too great for him to bear and the exertion too strong for his unaccustomed nature to stand, causing an unusual flow of blood to the head, resulting in a convulsion.

J. F. S., Philadelphia.—I have an English setter bitch, twelve months old, which is very much prostrated with symptoms which, to me, are strange. She is naturally very delicate, scarcely ever having a good, hearty meal, and she is very nervous and easily excited by noise or damp air. She for two or three days has had some fever and a cough, quite violent at times, which ceases when she attempts to move, copious discharge of mucus from her eyes, and an excessive and exhaustive diarrhoea, the feces being black and very unnatural. I should conclude that she has some constitutional defect, but I cannot say so, until I see her discharge from her nose, and a moderately good appetite, which she has, in all my experience—with distemper, I have never observed, seems to preclude such conclusions. The diarrhoea seems to be at variance with general symptoms. She however has attacks of shivering, and sometimes vomiting, and is very nervous and easily excited. I have given her an ounce of castor oil with five drops of laudanum. She is a very promising dog, and of good strain, and I shall await with anxiety any suggestions or opinions which you may please to offer. Knowing your facilities for information and your general desire to improve the breed, I have no hesitations in referring the case to you, without less putting with distemper. Give calomel, 1 grain, tartarized antimony, 1 grain, following it the next morning and evening with a bolus of antimonial powder, 3 grains, nitrate of potash, 10 grains, ipecac, 2 grains, digitales, 1 grain, continuing the same for three or four days, decreasing the dose very gradually, and giving a few drops of tincture of iron daily, a teaspoonful of Huxham's tincture of Peruvian bark, to promote an appetite and to stimulate the general tone of the system. From the delicate nature of your dog, we fear distemper will go hard with her. The mucous discharge from the nostrils should appear during the course of the treatment. Do not, look out for it, treatment for which see in same column as this.

A WEEKLY JOURNAL,

DEVOTED TO FIELD AND AQUATIC SPORTS, PRACTICAL NATURAL HISTORY,
FOR CULTURE, THE PROTECTION OF GAME, PRESERVATION OF FORESTS,
AND THE INSTRUCTION IN MEN AND WOMEN OF A HEALTHY INTEREST
IN OUT DOOR RECREATION AND STUDY.

Terms, Five Dollars a Year, Strictly in Advance.

A discount of twenty percent. allowed for five copies and upwards.

Advertising Rates.

In regular advertising columns, nonpareil type, 12 lines to the inch, 25 cents per line. Advertisements on outside page, 40 cents per line. Reading notices, 50 cents per line. Advertisements in double column 25 per cent. extra. Where advertisements are inserted over 1 month, a discount of 10 per cent. will be made; over three months, 20 per cent; over six months, 30 per cent.

NEW YORK, THURSDAY, JANUARY 14, 1875.

To Correspondents.

All communications whatever, whether relating to business or literary correspondence, must be addressed to THE FOREST AND STREAM PUBLISHING COMPANY. Personal or private letters of course excepted.

All communications intended for publication must be accompanied with real name, as a guaranty of good faith. Names will not be published if objection be made. No anonymous contributions will be received.

Articles relating to any topic within the scope of this paper are solicited. We cannot promise to return rejected manuscripts.

Secretaries of Clubs and Associations are urged to favor us with brief notes of their movements and transactions, as it is the aim of this paper to become a medium of useful and reliable information between gentleman sportsmen from one end of the country to the other; and they will find our columns a desirable medium for advertising announcements.

The Publishers of FOREST AND STREAM aim to merit and secure the patronage and countenance of that portion of the community whose refined intelligence enables them to properly appreciate and enjoy all that is beautiful in Nature. It will wander to no depraved tastes, nor pervert the legitimate sports of land and water to those base uses which always tend to make them unpopular with the virtuous and good. No advertisement or business notice of an immoral character will be received on any terms; and nothing will be admitted to any department of the paper that may not be read with propriety in the home circle.

We cannot be responsible for the dereliction of the mail service, if money remitted to us is lost.

Advertisements should be sent in by Saturday of each week, if possible.

CHARLES HALLOCK, Managing Editor.

WILLIAM C. HARRIS, Business Manager.

REPORTS.

WE have been favored with the sixth annual report of the Museum of Natural History, and a photograph of the handsome structure in process of construction on the corner of Seventy-seventh street and Ninth avenue, which is to contain the treasures now stored in the old building. The report speaks in the highest terms of the financial condition of the museum fund, and the increasing number of subscribers. The membership fee of \$10 defrays the current expenses at present, while all subscriptions of \$100 and upwards are reserved for increasing the collection. During the last eleven months the membership has increased from 350 to 1,100, and it promises ere long to be sufficiently large to enable the managing committee to secure the aid of scientific gentlemen to classify and arrange the various families and species.

The museum has received a very handsome donation from Miss Catherine L. Wolfe, the daughter of its late President, in the shape of a rare conchological collection, numbering 50,000 specimens, and a scientific library of 1,000 volumes. Mr. Witthaus has also given 8,000 specimens of the American coleoptera, representing 2,000 species.

The Smithsonian Institution has furnished some birds' nests; sixteen skeletons of the moas, or gigantic fossil birds of New Zealand, the largest of which is over ten feet high, have been secured; and \$13,000 have been subscribed, chiefly by the trustees, for the purchase of new faunal collections. A mineralogical department has also been added, and it now numbers 7,000 specimens.

The educational work of the museum is evident from the fact that teachers take pupils there to give them instruction, and that as high as 10,000 people sometimes visit it daily. An edifice of this sort should be supported liberally in a financial way, for it is not only a credit to our city and State, but also one of the highest educational institutions in the land in all matters pertaining to natural history.

We have received a pamphlet on the natural history of the muridae found along the route of the Northern Boundary Survey, prepared by Dr. Elliott Coues, the naturalist of the expedition. The technical description of each species is ample, yet concise, and is probably the most complete issued thus far. The ground covered by the report is a

belt of country extending along the parallel of 49° north, from the Red River of the north to the Rocky Mountains, representing the northern boundaries of the Territories of Dakota and Montana. Of the muridae, the genera sigmodon, ochetodon, myodes, and cuniculus are not represented, as the first two are southern and the others Arctic, yet all the species and genera are introduced to complete an account of the group.

COLLEGE CONTESTS.

COLLEGE students, who are now recognized as our highest types of mental and physical culture, as a class, have taken a very prominent interest in rifle practice of late. Harvard and Columbia will soon have rifle teams, and other colleges will, no doubt, follow their lead; for if any one thing animates our students it is a generous spirit of rivalry, and the desire to uphold the honor of their alma mater in all manly accomplishments. In that case, intercollegiate rifle contests will become as much a part of the physical curriculum as boating or base ball is at present, and will be prosecuted with the same vigorous enthusiasm.

By devoting a share of their attention to this exercise, students would become adepts in a virile accomplishment, one which would prove of use to them in many ways, besides its cultivation of the eyes and nerves, and imparting to them a steadiness and confidence in certain cases of danger.

It has one decided advantage over other exercises to them, especially boating, and that is that they need not forget their studies or go into long and severe training to become experts at it. They have plenty of leisure to practice after school hours, and Saturdays, and that is time enough to enable them to become excellent marksmen in a very limited period. The matches between the English Universities and schools are as interesting as any event at Wimbledon, except, perhaps, those between the three Kingdoms, and the victors receive as much applause and are as proud of their laurels as if they were the crew of the winning boat in the great aquatic contest.

If the competition is so keen between the students of Britain, and their victories are so much applauded, we do not see why the same conditions should not exist here. We are fain to believe that our colleges can produce rifle teams that will equal, if not excel, those of Great Britain, from the fact that but few young men are found here who are not acquainted with the use of fire arms, and that they have many opportunities for practice.

Every prominent seat of learning in the country should, then, organize rifle clubs, engage in friendly contests with each other for a pennant or cup, and when they have proved their power challenge their trans-Atlantic kindred to a trial of skill. This would cause rifle exercise to attain a vigorous existence in this country, and would, at the same time, give the students a delightful source of recreation and an accomplishment of general utility.

THE INTERNATIONAL TEAM.

BUT little has been done recently toward organizing the American International Team for 1875. Since the close of the Fall matches, the gentlemen most conspicuous in rifle practice have been confined to business, so that they have had but little opportunity for completing any arrangements for the coming contest, yet the general understanding is that the team is now composed of those who participated in the international match, and those then known as the reserves.

Positions in the team are open to any citizen of the United States who proves himself a better marksman than any member now in the selected number; and in order that the best shots may be chosen, an opportunity will be afforded to all persons who desire to compete for a place.

The matter of carrying out the next international match, on the part of the Americans, is now under consideration, as the Amateur Club have delegated all their interest and power in the premises to their Executive Committee, who are to complete the arrangements. The President of the National Rifle Association, at the request of the Amateur Club, has been authorized by the Board of Directors to appoint a committee of five members from the Association to co-operate with the Executive Committee of the Amateur Club, in completing details. This committee was appointed at the meeting at the Astor House last Tuesday evening, and consists of M. T. Malone, Wm. C. Church, Henry Fulton, Hon. D. W. Judd, E. H. Sandford. Gen. Molinex was added to the committee for the short term.

This joint committee are not bound to accept as representative men, the gentlemen now known as the American Team; hence they will hear the claims and carefully consider the qualifications of all desiring a place, and will use their best judgment in selecting the next team.

It is well known that many men are now practising at private ranges in order to test their own skill, and a few of these may prove better marksmen than some of those engaged in the recent match, hence the final selection can not be made until it is found that the present team cannot be excelled. Besides the performance of this duty, the joint committee have also to secure the means to pay the expenses of the team while abroad. The sum needed will probably amount to \$13,000, as some presents are to be made to the Hibernian Riflemen, to reciprocate their kindness while here, and to show the esteem in which they are held. This amount can, of course, be readily secured, so that little difficulty will be encountered in that direction. After the team has been organized they are to select a Cap-

tain. The choice now is Col. Gildersleeve, one of our best shots, and a typical American riflemen, and one besides who has both experience and a thorough knowledge of his duties. If he will accept the position he will, undoubtedly, be the next commander. This team will leave here in June, probably about the early portion, and shoot the match near Dublin at a date early enough to enable them to participate in the Wimbledon contest.

The Irish and American riflemen will encamp together at the latter place, as the former are making all necessary preparations for the comfort of their visitors. This will make their tarry in England most pleasant, as they will have the companionship of genial and admiring friends, and their large experience in "Coaching" on that treacherous range.

The fear that our men would not be enabled to compete in the Military matches at Wimbledon is now dissipated, for Major Leech, in a recent letter to Col. Wingate, states that the order in vogue, not to permit any persons using a rifle under forty-five calibre, to compete in such matches, has been rescinded. This has been done, no doubt, in compliance to our riflemen, and to enable them to test their skill.

The programme as outlined thus far is working very satisfactorily, hence we may rest assured that our team will make a good name for themselves across the Atlantic, and return with honors, if not with the laurels of victory.

THE GREAT HUNTING AND SCIENTIFIC EXPEDITION.

WE give this week the promised reply of Col. McClarty to the objections raised by several of our correspondents to his contemplated hunting expedition to Texas, Oregon, and California. We find that while the Colonel accepts the strictures as correct on general principles he decides emphatically that his critics reason from false premises. Moreover the details of his programme as given by us about a month ago, led our readers to suppose that the hunting would be commenced in May, when in reality it will not begin until the later part of June or the first of July. We are free to say that the Colonel's views not only accord with our own as gathered from personal experience, but are endorsed also by residents of Texas and other sections of the remote West, and we think that he has successfully met the objections raised, as may be determined from a perusal of his letter which we herewith append. Besides, this expedition was not originally designed merely as a chase after game, but included in its comprehensive programme a penetration into some of our richest archaeological and otherwise scientific fields of investigation. We shall perhaps be able not only to discover new geographical features, new minerals, and new species of flora and fauna, but possibly new races of men and ruins of ancient villages and cities:—

FIFTH AVENUE HOTEL, NEW YORK, January 11th, 1875.
EDITOR FOREST AND STREAM:—

In several issues of your journal, printed subsequent to the announcement on December 31st of my hunting expedition through the West, I am asked to task an inveterate destroyer of game, and now propose to meet in detail all the seeming objections that have been raised by the writers.

I will preface my remarks by stating a fact, which I presume they well know, that from the earliest period such parties as the one proposed have been in vogue in Great Britain, and Europe generally, and particularly in Africa and India.

Royal parties annually hunt all varieties of game in preserves so contracted, and with the game so tame, that to call it sport would be a satire in our own vast country, where our creatures are free to roam over thousands of miles of area. As an illustration, a certain English Lord killed me within a fortnight, that during the previous season he had killed in his own preserves over 1,200 pheasants. Now this noblemen might be branded as a slaughterer, and yet his acquaintance has been courted by all the crack shots of Chicago.

If this gentleman destroyed 1,200 birds, how many do you estimate must be annually killed in Great Britain? Do you suppose for one instant that this hunting party of ours contemplates any such destruction? I decline even the imputation. We go for sport, and not for slaughter, nor to secure skins; but to shoot game in season when it is in condition. I am an old sportsman, and a lover of Nature in all her features; and have you ever seen one such who would wantonly destroy game without he had use for it?

The gentlemen who object to my action forget that the seasons are three months earlier in Texas than in the East, and consequently, that the game is developed much sooner; that our quail hatch in February, our wild turkey in March, our grouse in the same month, usually raising two broods per annum, and that the buffalo calves in April. No hunter ever shoots a buffalo cow with a calf, or an old bull; but only young heifers and young bulls are killed, and they are nuisances to the herdsman of Southwestern Texas. If all the buffaloes were killed, it would leave the owners of cattle from a grievous annoyance, as it would check all depredations on their ranches by the fierce red warriors who follow in their path. With the extermination of the former the Indian would cease his work of rapine and murder, and by this the government would save millions of dollars and the precious lives of many of its best citizens.

But this explanation has little to do with the immediate question. My object is to show that we do not wish to wantonly exterminate the game, so I herewith give a detailed programme of the contemplated trip, that all may understand that we are not only true hunters and anglers, but also a private corps in search of science, health, and pleasure.

OUR PROGRAMME.

We leave Glasgow, Scotland, May 1st, per steamship "State of Nevada," specially chartered by me for this trip; arrive in New York about the 15th, where we will remain some days, or at least, make short excursions about the city and bay; thence to Niagara Falls by the Erie or New York Central Railroad, remaining one day; thence to Chicago, arriving a few days; then take a steamer, specially chartered, and proceed to Lake Superior, fishing the rivers and lakes for two weeks; then return to Chicago, and after a rest of five days start for Texas, where we are to go in our wagon train, hunters and commissariat already provided for the journey. Thus, you see, takes us into the middle of June, when wild turkeys and quail are full grown, fawns have lost their spots, and buffalo calves are brown. After hunting through Western Texas for fifty or sixty days in quest of buffalo and other varieties of game, we will reach Pueblo, Colorado, and thence proceed up the railroad to Colorado Springs, where we will rest for a few days, and those who are so inclined can visit the Twin Lakes and look for the spotted trout so numer-

ons in its tributaries, climb Pike's Peak, or bivouac in the "Garden of the Gods;" thence proceed via Denver, Chicago, Ozen, and Salt Lake City to the Yosemite Valley and the Big Trees. After enjoying the magnificent scenery of the latter region and fishing to our hearts' content, we will take a steamer at San Francisco for Oregon, and tackle the nobility of all fish, the salmon, in its favorite haunts among the rapids of the noble Columbia. After this the weather will not permit of much more fishing, so we accordingly return to San Francisco, thence more east to the Rocky Mountains, and spend a portion of our time in Kansas to enjoy Fall shooting among the grouse, deer, antelope, bear, and elk. We then proceed to St. Louis, remaining there a few days, then to Chicago to enjoy Fall duck shooting for a brief period, and then return to New York via Washington, where we will stop a few days, reaching England in time for the holidays.

I hope that with this explanation and programme your readers will be satisfied. I know every inch of the ground over which we propose to hunt and fish, and feel no hesitation in saying that we will bag all the game we wish, while the artists and scientists who accompany the party will find constant work for brush and camera and geological hammer. I am yours, very respectfully,
WM. C. MCCARTY.

We append several letters on this subject:—

NEW YORK, December 30, 1874.

EDITOR FOREST AND STREAM:—

Allow me a word on the subject of the great hunt, proposed by Colonel McCarty. On most subjects there are honest differences of opinion, which have for their foundation seeming truths, as they appear such to one side or the other; but upon this subject I cannot see whereon a single respectable argument can be based in the defense of the proposed hunt, or, more properly speaking, slaughter.

For cold efficiency and impudent assurance, it certainly excels any proposition I ever heard of. Either Col. McCarty has misunderstood the character of the better class of Englishmen of wealth and leisure (for none other have the time and means to devote to a hunting trip in this country, or else I do. For I would be sorry to be forced to believe that any party of English sportsmen, who are so tenacious of their hunting pleasures and privileges, and so careful in their protection of game at home as to make it a criminal offense to shoot either for or feather, even when in season, excepting by the owner of the land and those whom he invites, should deliberately come to this country and recklessly slaughter our choicest game, for the barren pleasure of telling of great deeds and wonderful prowess. If my opinion is to be tested, let it be upon the most susceptible targets at Creedmoor, rather than upon the poor, thin animals of early Summer. No true sportsman ever shoots game that from necessity cannot be utilized when killed, while it is notorious that not one-tenth of the game killed upon these hunting excursions is ever put to any further use than as manure to the little spot of ground upon which the unfortunate creature may fall. The sportsman, like true soldiers, fight only while the battle lasts. After the strife is over, the soldier is changed to the good Samaritan, and humanely binds up the wounds of his adversary. So should the true sportsman cease from strife during that reproductive and recuperative season which nature intends for the multiplication of game. We have enough of game murderers already upon our Western plains, without seeking to encourage more. At the same time we have a hearty welcome for all who are to shoot at the right time, and in a proper manner. The moral sense of the community should be aroused to stop what already exists in the shape of indiscriminate slaughter of game. Are there, or should there be, one code of laws for the protection of game east of the Mississippi River, and perfect un-restrained license west of that river? Either British humanity is illogical interference with man's prerogative, or else the field of his labor is confined within too narrow geographical limits. Either restraint is wrong here, or license is wrong there. I fancy no true sportsman will hesitate long to decide as to which is truly wrong. Like the prodigal, we have been recklessly extravagant with our game, but it is inevitable that total annihilation must ensue, the influx of young game is not permitted to replace that which is killed during the proper shooting season; nor will it do to ignore the value of our game, and silently reprehend the murderous practices, while such outspoken enterprises for its slaughter are afoot. Since become criminal in the face of such unwarrantable acts. The Government has a pecuniary, as it should have, a moral interest in this question. Already the Indians are complained of a country of game, and the Government, if their food is suffered to be destroyed by reckless hunters, it will have to be compensated for by provisions of the Government. Every buffalo killed means a barrel of flour or an ox to the Government. Let us hear, then, from all true sportsmen in condemnation of the proposed hunt. There is wide spread intelligence enough in this country to understand this question in all its bearings, if advocates of such "murder of the Indians" should never be permitted to handle anything worse than a "putty blower." They ought to take hold of this matter, and prevent such wanton cruelty to the beasts and birds.

I don't want to be personal, but I must say that I think the Colonel is "looney" on this matter. Why, the programme is tinelly as Barnum's "Blue Beard," and is an atrocity which should make every genuine sportsman go on guard to protect his game, and his honor. I wonder, Bergh ought to take hold of this matter, and prevent such wanton cruelty to the beasts and birds.

I don't want to be personal, but I must say that I think the Colonel is "looney" on this matter. Why, the programme is tinelly as Barnum's "Blue Beard," and is an atrocity which should make every genuine sportsman go on guard to protect his game, and his honor. I wonder, Bergh ought to take hold of this matter, and prevent such wanton cruelty to the beasts and birds.

For *contra*, we have several letters of endorsement, among which is the following from OLD SCOUT, a correspondent with whom our readers are familiar:—

NEW ROCHELLE, N. Y., January 11th, 1875.

EDITOR FOREST AND STREAM:—

A gentleman upon the subject writes me as follows:—
"I wish you would tell the sports to the Big Hunt that they have license to kill as much game in Texas as they can, and I am almost induced to offer a premium for every antelope they kill, but am too poor. But it will not be well for Texas to have these Englishmen see our good lands and loving herds. You know they go heavy on beef, and we have plenty for all. Come on! Suppose you come down with them. I am not afraid that Texas will hold her own with any country they see, California not excepted."

A Dallas paper also says welcome.
I guarantee the sports a hearty welcome in Texas, and may join them in this "promised land."
OLD SCOUT.

THE DESTROYED MAILS.—The mails destroyed on the Baltimore & Potomac Railroad last week, included mails of the following dates and cities: New Orleans, evening of the 4th instant and morning of the 5th; Charleston, S. C., 5th; Wilmington, N. C., 6th; Nashville 4th; Richmond, Va., 7th; Savannah 4th; Galveston 4th, and Memphis 5th. Such of our correspondents as may find us seemingly derelict, can readily divine the cause if their favors sent by any of the mails named above.

THE BREECH LOADER.

"THE breech loader is not bored in the same manner as the muzzle loader. If the latter is bored true, it is of little consequence what the bore is, as it can be made to shoot well if the right charge of powder and shot is so selected as to suit the particular size of the bore.

"In a breech loader the charge is started in a eleven bore cartridge case—that is, the exact size of a twelve cartridge case inside—and compassed into a twelve bore barrel. A certain amount of compression is necessary to obtain strong and close shooting. The penetration or pattern can not be improved by increasing the amount of powder and shot beyond a certain charge."

"There is no efficacy whatever in the very long barrels which once were used, and they are consequently discarded.

"The material of which a barrel is composed is but one branch of the question. Upon material depends safety, of course, but that may be taken for granted in the barrels of all reputable makers. When a barrel sold by one of these happens to burst, inferiority of metal is the last cause to which it may be attributed. Upon the material and its manner of being worked depends the pattern or figure of the barrel. That is purely a matter of fancy."

"But the important question is, how well does the barrel shoot?"

"The quality of the metal in the barrels undoubtedly has something to do with their shooting. For all we know—I mean we are not in the trade—it may have a great deal to do with it. But so long as the best barrel makers use metals of precisely opposite qualities, without producing any very marked difference in the shooting of either, we may be permitted to think that one sound metal, well worked, is quite as good as another."

"The good shooting of barrels depends almost entirely upon the boring, and the art of boring is no longer a secret confined to a few of the craft. The formula has become the common property of the trade in this as well as in all other countries."

"Therefore, there is hardly any well-defined difference in the shooting of any of the guns, English or American. Certainly there is no one man, in either England or America, who has such superiority in barrel boring as to make him stand far above all the rest of his competitors, as Manton did."

"But the guns of one maker may be found to shoot better, as a rule, than the guns of another maker."

"When this is the case, it is to be attributed, not to any exclusive knowledge in boring, but to the fact that more labor and skill are given to make the barrels shoot better, and that they are targeted until they do shoot up to their very best. These barrels cost more because of this extra attention. And the maker who does this the most conscientiously, deserves the best price and most reputation."

"I believe that the muzzle loader has been developed to its utmost shooting capacity. I think everything has been got out of it that there is in it, and the proof of it is, that for the ten or fifteen years preceding the breech loader, the muzzle loader was at a stand still. It was a perfect weapon—of its kind. There was no one maker indubitably better than another. The shooting of all their best guns was pretty much the same."

"This perfection and equality of shooting was transferred to the breech loader, as soon as the gun was strong enough to stand it. And the only problem now is, whether in future, owing to the structural differences in the guns, the breech loader will not be made to shoot better than the muzzle loader ever did. I think it will. It must—if there is anything in the saving of windage, and the theory of rifles, which puts a ball in the larger breech to exit through a smaller muzzle—gain power thereby. One seems as pertinent and as applicable as the other."

THE SELECTION OF A BREECH LOADER.

"Formerly, when about to select a gun, the purchaser had but few points to determine before making a choice. Now he has many. For the time being, at least, he must become a participant in the "war of the breech loaders," to the extent of choosing one, and thereby being deemed an antagonist of all the rest."

"If the whole is not for us against us," is the maxim of the makers and the dealers; and, therefore, to select a gun, and to advise how to select it, are embarrassing undertakings."

"In selecting a breech loader, there are other things to be considered beside the shooting of the gun."

"The safety of it is first to be considered. There is more machinery in it than in the muzzle loader, and to that extent, if not more, it is more dangerous. The principles, it is more dangerous and must be less durable."

"The principle is a prime consideration; for if a gun, no matter how well-made or high priced, is built with a working movement which is all strain and all friction, it must speedily wear out, and the money paid for it is thrown away."

"The durability is another consideration. The best breech loader is the soundest action, will wear sooner or later, because there must be some strain and some friction. Durability, therefore, will depend upon the excellence of materials and the finish of the work."

"The shooting of the gun is a consideration of course, and has been already fully discussed. And, finally, the price is a controlling consideration. It is a very serious mistake—and one which is made by the majority of purchasers—to suppose that in buying a breech loader there is nothing to be considered but the price and the shooting. And to this mistake we owe the controversies which fill our sporting papers."

"Each of these points will be noticed, that the purchaser may see their importance."

"That a man should consult his safety, first of all, when selecting a life-taking weapon, needs no argument. All other matters of price or performance are subordinate to this."

"That the principle of the gun should be sound, and that the durability will depend upon the principle, the material, and the work, will not be denied."

"It is no economy to buy a low-priced gun, with an unsound principle, or of inferior workmanship, because it will soon become useless."

"As to the shooting of the gun, the man misleads himself who says that because a cheap gun will shoot as well as a high priced gun, the cheap gun may as well be taken."

"The price of the gun, I have put last to devote most space to it; but the buyer will always put it first after safety."

"When the question of the price of the gun is settled by him, the question of the simplicity and durability of the movement, between guns of the same price, will come next to be settled."

"On the question of price, I have some very decided opinions. To my mind, there should be something more to a sportsman in his gun than a mere tool wherewith he works. It should be something higher to him than a mere matter of wood and iron. There should be an element of fine art in it. A fine gun is the work of an artist. It is a fine picture to him who can trace the lines of beauty in its graceful swell, and appreciate the delicate taste displayed in its unsensational ornament."

"Sportsmen, and particularly American sportsmen, as a class, should reflect that the nearer to art they raise all things connected with their sport, the more they ennoble themselves and enhance their pleasure."

"Believing this firmly, as I do, I have a word of earnest advice to the shooter starting on his career. Even as old Polonius advised his son, as to the purchase of his dress, so I advise the sportsman as to the purchase of his gun; 'Let it be costly as they purse can buy.'"

"I do not say this to encourage a lavish waste of money, but as I would to encourage any of the refinements of civilized life."

"The man of limited means, however, can not indulge in high figures. He must take an article within his reach. Very often the unavoidable expenses of his sport make sad havoc with his small resources, and to hold him to a high priced gun would be to debar him altogether from the field."

"The cheap guns only are within the reach of a majority of buyers in America. Because they are cheap, that is no reason why they should be worthless; and no reason why the buyer should be cheated, as he constantly is."—
From "Gleanings" work on Guns.

VARIETY OF TARGETS.—We have received a communication from a very valued correspondent, and an authority on rifle practice, on the new system of targets adopted in various portions of the country, but especially those used by the American Rifle Club of Mount Vernon. We thoroughly agree with his premises, that one general system of targets should be used throughout the Union, in order that we may have some means of determining the accuracy of the shooting of the different clubs and noting their progress when compared with the Creedmoor practice. If each club has its own system of marking, we can make no satisfactory deductions of its marksmanship; hence, under present conditions, it would be best for all to adopt the Creedmoor style of targets, as they are cheap, simple, and easily managed.

The introduction of the Wimbledon targets into this country is impolitic, owing to their cumbersome and intricate character, their expensiveness, and our want of trained marksmen. In England the latter are members of the regular army, and are placed under the strictest discipline, so that any wrong act or violation of duty can be promptly punished. These conditions being wanting here, every club should adopt the Creedmoor rules, in order to avoid confusion and to secure unity and simplicity.

A MATTER FOR EMULATION.—We to-day had the pleasure of looking over a fine lot of live western quail (200) en route per Adams Express for Towanda, Pa. They are in answer to a philanthropic order of A. E. Chamberlin. The birds have been selected with unusual care in regard to health and hardiness, and the proper proportion for breeding purposes. Mr. C. proposes to turn them out in the vicinity mentioned about the 10th of February, in time for them to take advantage of St. Valentine's day. And he hopes to have a numerous progeny as the result when his friends come to see him in the Fall.

How many sportsmen are there in that neighborhood who will properly appreciate this generous effort of our friend to advance the interest of the fraternity?

POULTRY EXHIBITION.—The last week has been devoted to the second annual exhibition of the New York Poultry Association, at Utica. A good effort was made to get up a bench show of dogs. We acknowledge the receipt of a complimentary ticket to attend the exhibition.

THE "ANIMAL KINGDOM."—This journal, which is doing so much to foster a love of the animal world, and to suppress all species of cruelty exercised toward our dumb slaves of the brute creation, is, we are glad to know, receiving a liberal support from all lovers of kindness and humanity. Mr. Russell has retired from the paper, and all the work is now done by the editor.

The following shows the number of visitors to Florida during the Winter season for the years named extending from December 1st to May 1st: 4,000 in 1869; 7,000 in 1870; 14,000 in 1871; 20,000 in 1872; 25,000 in 1873. The season, 1874-5, the number is expected to reach 35,000.

—Bat manure, obtained from caves in the West India islands, is on sale at Jacksonville, Fla.

WISCONSIN STATE ASSOCIATION.—We have received the following notice with request to publish it:—

TO THE SPORTSMEN OF WISCONSIN:—The first meeting since its organization, (on the 15th day of August last) of the "Wisconsin Club Association for the Protection of Fish and Game," will be held at the city of Madison on the first Tuesday of February next, being the 24th day of February, 1875. You are earnestly requested to be present at said meeting, as representatives of club, or otherwise, and aid in the perfection and development of our organization.
R. H. STORRS, President.

M. T. BARNES, Recording Secretary.

—The Chatham Inspector of fisheries captured nets, used illegally, last week.

SHARKING.—A correspondent describing the fun to be had at Esperanza, Florida, says that a party went to the beach one day and returned in half an hour with the following dainties:—

"Two bushels of the finest clams, any number of fat mullets, bass and other fish, a bushel of fat stone-crabs, and any number of fat sea-crabs—small fish in any quantity. Meantime the sea-birds, of every variety, were flying above their heads, and all of the finest on our Southern coast. Some of the party, who had now become weary of such sport, put out a shark line, baited with a mullet, just off the beach of the boat, and within two hundred yards of the house. In fifteen minutes, they had a large shark, whose liver it was computed by some of the fishermen present would yield fifteen gallons of oil. Again the line was baited, but this time with shark instead of mullet. By the time the boat, which carried out the line, could return to the beach the line "surged" again, and another monster was hauled up, floundering, jerking, and otherwise affording sport to the bystanders. Each of these were dispatched, when hauled up, with a rifle. Thus the sport continued, a large shark hauled up about every fifteen minutes, and it is computed that the number actually caught would have yielded, by simply boiling the livers on the spot, about eighty gallons of oil, worth from seventy-five cents to one dollar a gallon.

It is probable that from the 1st of June to the 1st of November, each year, sharks enough could be caught each day to yield at least one hundred gallons of oil, the apparatus for boiling which could be constructed on the spot, and the oil transferred to barrels, without the need even of a shed, except for the comfort of the operators. The fishermen think that sharks can be captured the whole year round."

QUEER FISHING.

DANVERS, MASS., December 29, 1874.

EDITOR FOREST AND STREAM:—

I have been somewhat amused by the novel way in which flounders are taken along our shores for ten or twelve days at this season of the year. Two persons proceed to the shore with a net with a piece of flannel tied to the meshes near the bottom, the other with a pole, on the end of which a strip of the same material is fastened. One holds the net on the bottom, where it can be seen, while the other draws his strip of flannel slowly over the bottom towards the net, and the flounders, eagerly following, are quickly dispoiled. In this way large numbers are taken, and I have seen three taken at a single dip. Will some of your numerous correspondents give the reason why these silly fish are so easily enticed by the red flannel at this time only? A. F. G.

ACKNOWLEDGMENT.

STUDIO, 41 TREMONT ST., BOSTON, January 8th, 1875.

MY DEAR HALLOCK:—

THE FOREST AND STREAM has overwhelmed me. I am more than delighted with the history of that salmon. You are the only person who seems to comprehend what I tried to do in the painting of those pictures. I had really begun to think I failed to express what I felt; but your sympathetic brain has proven that I did at least suggest something near what I tried to put upon canvas. I am indebted for the encouragement it gives me to know that there are some people who can understand. I congratulate you upon the mastery manner in which you handled that difficult subject. WALTER M. BRACKETT.

Yachting and Boating.

All communications from Secretaries and friends should be mailed no later than Monday in each week.

HIGH WATER FOR THE WEEK.

—The Friendship Boat Club has elected the following officers for the ensuing year: President, James F. Daly; Vice President, J. O'Carroll; Corresponding Secretary, William Dittmar, Jr.; Recording Secretary, Albert Saner; Treasurer, M. J. Murray; Captain, W. J. Hurley; Delegates to Aquatic Convention, J. S. Murray, J. McCartney, J. L. McCabill.

A new boat club has been organized in Hoboken, with Charles Kahn as President, Benjamin Baptiste, Jr., as Treasurer, and Charles Buck as Secretary.

—The rowing Association of American Colleges held a special meeting at the Allyn House, Hartford, Ct., Jan. 13, at 10 A. M.

—The Executive Committee of the National Association of Amateur Oarsmen held a meeting at the Astor House, this city, January 2. The resignation of Mr. Pinkerton as Secretary was accepted, and Henry W. Garfield of the Mutual Club of Albany, N. Y., was elected to fill the vacancy. It was decided to hold the next annual regatta on the same water as last year, at Troy, N. Y.

—The Schenck Navy held their annual meeting January 4th, when the following officers were chosen: Commodore, Jas. M. Ferguson; Vice Commodore, John Hockley, Jr.; Secretary, Jonathan Gillingham; Treasurer, Frank W. Murphy; official log-keeper, W. R. Tucker.

—At the annual meeting of the Madison Yacht Club held on the 6th inst., the following officers were elected for the ensuing year: Commodore Chas. G. Mayers; Vice Commodore, John Gallagher; Recording Secretary, Julius Zehner; Corresponding Secretary, James E. Fisher; Treasurer, Henry Purville; Measurer, Geo. A. Patterson; Steward, Amos Packer; Regatta Committee, Wm. G. Pitman, Sidney Foote, Rufus B. Smith; Club House Committee, M. T. Bailey, John Coscott, Phil. Dunning. The club is in a flourishing condition, and promises good sport the coming season. Several new boats will be added to the fleet.

M. T. B.
—LYNN YACHT CLUB.—The following are the officers elected at the annual meeting of the Lynn Yacht Club, Commodore, C. L. Babb; Vice Commodore, C. S. Purinton; Fleet Commander, G. H. Clifford; Secretary, W. E. Neal; Treasurer, Henry W. Marks; Measurer, J. M. Taylor; Trustees, S. J. Roney, Q. A. Townes, S. T. Downs; Regatta Committee, E. C. Neal, G. F. Thorndike, Frank L. Earl, F. U. Hay and C. H. Clifford.

—Robert Bagnall and Thomas Winslip tried their mettle against W. Lumsden and R. W. Boyd in a pair-oared race in England December 21st. The latter were the winners, owing to a certain extent to the action of a steamer that nearly ran down the former. Time of race 24m. 25s.

—To all who know anything about ocean sailing, the advantage of the southern passage across the Atlantic will be patent, while if any one is entertained on the question, perian a fact, the latter supplied would get them at rest. Some twenty or more ships left England at the same time for an American port. One of the ships, the *Huguenot*, being in ballast and somewhat poorly manned, made the southern passage and experienced pleasant weather, and beat all the other vessels, which had been detained by the severe gales of the higher parallels of latitude. *Holliday Reporter.*

YACHTING IN FLORIDA—NO. 2.

OUR third day on the little steamer found us among the prairies that lie on either side of the river below Lake Monroe, where we saw low plains with groups of white islands, and low rows of stately palmettos defining the curves and retrappings of the idle river, reminding us of the pictures of eastern scenes of desert and palms. Herds of half wild cattle were seen upon them, and sometimes a wild turkey would seek cover, not by flight, but by running like the wind. A little back from the river on wet places out of rifle range were groups of white herons, the most stately and beautiful of birds, and great flocks of larger curlews, wild now and their gamnets would spread their huge black and white wings, and seek quiet further apart from the river. No bird is so showy and conspicuous as the gamnet, and it was long our ambition to get one for the plume, but they were very wary, and only settled down in wet places remote from any cover of trees or brush. Fortune, however, at last did better for me than patience and perseverance, (patience and perseverance in favor of the fickle goddess), for while rowing a skiff, a flock alarmed by a steamer, came laboring over the river, urging their way with powerful pinions against a gale of wind. "They saw us, and tried to steer clear by turning their course several points into the wind, but they made too much leeway to save their distance, and one fellow came down before my gun, and sent up a cloud of spray from the river in his fall.

"Get 'um quick!" exclaimed old July, my faithful guide, "for an alligator may carry him down," and get 'um quick! did bring in, as magnificent a mass of green, black and white plumage as nature ever adorned a bird with, arousing some speculations as to what a great economy would result, and what a vast amount of envious and toilsome strife and ambition would be saved, had poor bare humanity been as comfortably and superbly clothed, without the toil of the needle, or the costly fabrics of fashion. These reflections I impress July, who at once explained his "get 'um quick" counsel as inspired by an experience that had impressed him very deeply. A gentleman hunting from Enterprise shot a duck which fell in the water. As he was about taking it in, a large garol appropriated the bird. The gentleman in turn gave the beast a peppering of shot for his sauce, enraging him, without any serious injury, who he turned on the boat and took a piece of the side, gunwale and all, so damaging it that they only made their way home in it by careening the broken side high out of water. These ill-mannered fellows often deprive the hunter of game that falls in the water, and the foregoing incident teaches the imprudence of irritating them with shot.

The fishing about the outlet of Lake Monroe is very good, but gar and catfish play the mischief with trolling gear, and carry away spoils most annoyingly. Bass are the best fish obtained, here known as trout by those who cannot even imagine the rapid mountain streams wherein our northern beauties seize our dainty flies.

In one of the eddying pools I took bass so rapidly that in less than half an hour the bottom of the skiff was alive with them, which to avoid waste were given to the steward of a steamboat, and abundantly supplied the table for a hungry crowd of tourists.

In the springtime the herons assume, to adorn their season of love-making, a plumage of remarkable beauty. It commences at the base of the neck, and extending backward between and over the wings, the long airy plumes of dainty feathers sprays hang down gracefully behind the bird, and give a very stylish addition, *a la* "pannier," to a bird that never saw a fashion plate, and has no trouble with a hairdresser.

To obtain these exquisite decorations for the race so sadly neglected by nature in regard to the adornments so lavished on the inferior creations, these "angel birds" are assiduously hunted, and are consequently so wild that only by strategy can they be shot on any of the borders of the river.

From our deck we noticed that numbers of blue, white and leafy laurel alighted very constantly upon two isolated trees standing at the end of a shallow water way that extended from the river into the prairie; so with the hope of gaining some shots, we ordered a halt. The steamer was tied to a tree, and we launched a skiff and paddled through the water lilies or "bonnets" (as the huge leaves are called), starting flocks of duck, rail and birds, and disturbing the stas of numerous alligators and turtles. The only shield was under a dense water lily, where we hid ourselves as well as we could, draping our hats with Spanish moss, and disposing it about, for concealment.

After a time all the turmoil we had caused ceased. The ducks came one by one, and dodged about under the reeds and lily leaves, while inquisitive blackbirds flitted near with impetuous airs, and chaffed our ideas of concealment with unbounded slang. An alligator had been out sunning himself in the water, and came up close to a ripple, and eyed us with long curiosity as interlopers, and drifted almost against the boat; but we were after herons, and would only shoot them, after the manner of the western man, who "when he went a catin' went a catin'," and would not accept a bass or pike in lieu of the wide-mouthed bullhead. Animal life was abundant all about, with little evidence of fear, and, watching it, we began to realize how deadly and cruel such naturalists as Audubon realize in thus studying birds and animals when free in their own haunts.

Nothing seemed aware of us but the herons. They came from remote points, and seemed about to perch on the old trees, where so many were seen, but swept by and went on to other retreats. It was hardly possible for them to discover us, and we could not divine any cause for their wary

movements unless they were warned by the angry scolding of the blackbirds that hovered about with incessant sharp cries. A shot or two reduced these pests to comparative silence, when a blue heron sailed up, poised for a moment on a bare limb, and then fell lifeless into the pool below.

Hoping for other shots we did not gather it in, but it was not long before an alligator slowly swam toward the dead bird, and would probably have carried it away, but for the arrival of a Mead explosive ball in his head. He churned the water for a moment like a propeller wheel, and then sought the bottom to die among the weeds, and again all was quiet. But we waited in vain; herons sailed about over the marshes, but none came near, until weary and sunburned we poled back to the yacht, glad to get claret and ice.

Our plan was to go above Lake Monroe, but the water was too low on the bar, and our boat could not get over. We visited Mellenville, where shade were being taken in enormous quantities; and then anchored abreast the site of the old Enterprise hotel, and landed, to visit once more, after several years absence, the Blue Spring, from which none can be more beautiful. It has been often described, but it is not easy to convey an idea of the deep opaque tint of the water, nor of the pictures of effect, but the round pool, and its overhanging shade of live oak, palmetto and vines. It is about eighty feet in diameter, and very deep. There is no motion to the blue water, but a large stream flows away from it, showing the volume of the spring. The water leaves traces of white sulphur about the brook, which falls some twenty or thirty feet to the lake, affording a perfect place for running water and shower baths. A small hut over the stream was built by the owner, and here, but in time this will undoubtedly be developed into one of the most beautiful resorts on the river, and prove one of the most healthful and agreeable.

We remained over night at the Mellenville wharf, and visited some gardens conducted by people of taste and skill, and saw many evidences of the capacity of this soil and climate to produce almost every luxury. Potatoes were grown in February, and the fruit of oranges and bananas flourished free from danger of frost, and beautiful flowers rewarded very little care with profuse bloom. The geranium was a small tree in the open air, and the oleander made shade for a party.

Strawberries were ripe while ours were under deep snow, and it was not easy to put faith in the idea that the cold March winds were heaping drifts that would for many a day rest on the river, and that fell on the hills.

Turning northward, we gave ourselves up to the current, and went rapidly on. At times we would tie to a tree, and leaving the yacht, row quietly up some of the small and unfrequented streams that join the river. Here all was as wild as when the Indians pursued game with their stone arrow heads, and took fish with bone spears, and cast her glories of golden sunlight and varied foliage on every hand. The huge serrated leaves of the palmetto swayed and glistened like shields hiding a woodland host. Cypress trees held their light foliage high against the sky, and graceful vines hung in long curves from them to the dense undergrowth of novel form. Creeping plants held their bloom over the water on dead trunks, and air plants and ferns and resting places on the old oaks, in whose upper branches balls of mistletoe shone in their polished leaves. All this would be doubled in reflection, and the dividing line between the beautiful reality and the more beautiful image below, was so hidden by trailing vines and aquatic plants that the vistas of the narrow streams became dreamy and indistinct as they extended far away into an uncertainty of waving moss and deceptive shadows.

When we would go on miles in advance of the yacht, drifting noiseless with the current, often stealing upon the game, and frequently getting a few fish. When tired, we could wait until overtaken, the our skiff behind the steamer, and enter the snug cabin to find shelter, rest, and all the comforts needful. No life could be more enjoyable. We were not confined to a limited district as when in camp, and yet there was the same freedom, and the same opportunities for seeing and sharing woodland pursuits.

The variety in the scenery, the ever changing scenes each hour, and new temptations and anticipations leading on from one point to another, all with little or no fatigue.

This steam yachting must develop as one of the most popular of all indulgences. With our great lakes, connected by safe and navigable routes, and rivers of endless extent and unlimited variety, through which one may wander from the tropics to the far north, and find all climates and all fruits, and all game, and all the unparalleled opportunities for this luxurious life. Winter sports and sports may impel one to wandering, in a yacht all the comforts and conveniences can be carried. The botanist can at leisure and undisturbed, unfold his cases of plants; the artist can sketch and not have to gather up the disorder of camp and studio; the geologist may ballast his craft with stone, and the ichnologist gather relics and form a museum of the past. For the sportsman and the sportsman it is perfection. His rods need not be unjointed, or his guns untried, and he can stuff his specimens, load shells, and the dainty flies by a window before which new and varied scenes are passing, and after a hard day's tramping come back to abundant comforts. As yet there are but few of these dainty craft abroad, and few are aware of the charming life they offer. The yacht, a pleasure private yacht, Falcon, on the St. John's, was a pleasure private yacht, and the man's craft, and in time many more will follow in her wake.

Of course there is a good deal of expense inseparable from steam yachting, but very complete launches and small yachts are now put about in perfect trim for hardly any greater cost for purchase or maintenance than is represented by each of hundreds of fine carriages that are to be met with on the fashionable avenues of our great cities, and the writer confidently from persons experienced in the abandonment of all ambition for the luxuries of cuisine, and a few plain and needful arrangements, a small family or a few gentlemen may make summer or winter trips with no more cost than is incurred by hundreds of pleasure parties who find far less of comfort and independence than they would commanding their own yacht and their own movements.

A man of as much skill as is required to make a successful sportsman, can do a great deal in attending to his own boat, so that the cost and annoyance of having too many men may be avoided; but unless our inspection laws are made more liberal, he must provide himself and his men with expensive licenses, and be sometimes compelled to take his men from a guild or union commanding needlessly high wages. All this, however, is in course of revival, and

beyond doubt boats that do not carry for hire will be set free from all needless restrictions.

The trip described in these notes was made in a small yacht chartered by the day. She was about 38 feet long, and carried captain, pilot, engineer and fireman, yet the cost for a party of four was only about the same as the cost of a hotel board and passage tickets over the route, while the ability to visit many points without remaining until another boat should permit moving on, was a very great economy of time and money. Of course much was seen and enjoyed that the tourist is usually hurried past, or only seen in company with a crowd that does away with all the romance and characteristic quiet of the wilderness.

The captain was a useless party and did no service. The pilot was a lazy fellow, the fireman was a luxury, a more attentive upon a larger engine; one man could easily feed the fire, and run the engine with less trouble than he could get out of the fireman's way, so that two men, one a competent and careful engineer, and the other a pilot well acquainted with the channels, could run a launch or small yacht with ease, and keep her under way as many hours per diem as would be desirable.

Not only are the rivers and lakes of Florida attractive for the grounds, but the inlets and estuaries of the Southern coast offer great inducements for the invalid, the naturalist, the antiquarian and the sportsman.

In the Spring when the sun begins to fall with a fierce heat on the rivers, and despite all said to the contrary, does render too much exposure imprudent, the sea coast is perfect. The finer kinds of fish are in season, and many beach and bay birds are to be obtained. In April the sea bathing is safe and pleasant, and invalids and all people will do a prudent thing who halt alongshore and delay their return until such birds as the bobolinks and orioles are with them, and not risk the loss of all the benefit of a long and costly trip by coming on with the robins and blue birds who are beguiled by a few warm days into slithering through many a long, bleak storm.

Your correspondent was later in the Spring one of a party on a cruise about the mouth of the St. John and the Sisters' Islands, and during the trip we landed on Fort George Island, where we were kindly driven about by the owner, who is engaged with a number of gentlemen of taste in forming a little paradise. The Island is not large, about eleven hundred acres. The St. John's outlet is on the south, Fort George inlet on the north, and the Sister's inlet on the west. Seaward a densely wooded forest of high shagbark oaks, and beyond is a superb beach for driving, bathing, cricket or croquet. From the bluff the view is of course very fine, and all the commerce of the St. John's River passes near at hand. The cleared part of the Island has a palm tree avenue that has no equal, and the forests are more varied than any that are accessible by drives.

Shell mounds supply material for fine roads, and many drives are being laid out that are wonderfully beautiful. There is but little of the dreary formal pine; but huge headed oaks that are worthy of Druidical homage, and stately palmettos, cast deep wide shadows, while orange trees and flowering vines and shrubs fill in the scene with luxuriant bloom and foliage. At St. Augustine the beaches are inaccessible to carriages, and distant by boats, but here they are where one can turn to them from the shaded avenues. The fishing is fine, and my knowledge as my fisherman took a third five pound bass from my skiff.

For lingering places for late March, April and May, these islands supply just what all feel the need of. No arrangements are yet made for general accommodation, but plans are maturing that, when executed, will supply a new and valuable resort to already attractive Florida, and more tempting to yachtsmen than any now existing.

Returning from this rambling disquisition upon drifting in one's own craft, we came back to our own for the time, and the her to the wharf at Orange Bluff, above Lake George. Night has fallen, and we light a pitch pine fire, and cook thereon while enjoying the picturesque effect of the rich, mellow light that illumines our boat against the dark river, and brings out here and there a tree in bright relief. Some hunters join us, light their pipes, and take their twilight from our deck. The stories of a real backwoodsman are always amusing, and awaken the common interest of all the craft. So it is late before we mature plans with our new friends for a hunt together, and they call their dogs and go to their cabin, and we turn in in the yacht. Of the hunt in our next.

W. L. W.

KEELS AND CENTRE-BOARDS.

BOSTON, January 2, 1875.

EDITOR, FOREST AND STREAM:—

A few weeks since, in an article on Keels vs. Centre-boards, a correspondent has stated that centre-boards are faster than keels. Now, as an admirer of keel boats, I protest against any decision being made in the question of speed, until all the facts are impartially stated.

Of what does our fleet of keel boats consist? When a centre-board boat gets out and runs, it is too slow to obtain a reputation for speed, hence owner begins to think of comfort, has his centre-board and case removed and a keel put on. By this change a much greater amount of room is obtained. Of every ten boats built, not more than one, on an average, is a keel. In boat building, as in everything else, practice makes perfect. From his experience in building keel-boats a builder learns to improve his craft, and gain greater speed. So few keel boats are built, however, that the art remains almost at a standstill.

A few second hand centre-boards and an occasional keel boat make but poor representations from which to form an idea of the speed of the model. A disposition to return to keels seems to be gaining ground among our yachtsmen. When as much attention is given to the building of keels as to that of centre-board boats, a fair estimate of their relative speed can be made. The superior sea-going qualities of keel boats are unquestioned.

It is hardly fair to argue from a single instance, but the following case might be made an exception: In the Fourth of July Regatta of 1874 the White Cap, a victor for many years, Shadow, and many others, forming the fastest fleet of boats ever assembled in this harbor, were all beaten by a keel boat—the *Enterprise*. This one race shows that a keel boat can have a great amount of speed. Respectfully,

SHEET ANCHOR.

WOODEN SHIPS.—The Philadelphia *Ledger* says: Of wooden sailing vessels we understand that in English and continental ports, the American ship and bark that are properly constructed, and are fitted out for the trade, they are the most employed at the best rates and insurance at all times get the best premiums, and shippers throughout the world are constantly inquiring for them. Their model, capacity, sea-going qualities and strength of construction are all in their favor, so that they outrank the wooden sailing ships of all other nations.

National Hastings.

—The following are the professional pines which will enter the arena in 1875 as contestants for the association championship pennant held by the Boston club since 1871:

ATLANTIC.	ATLANTIC.	BOSTON.	CHICAGO.

—According to the averages of earned runs and base hits prepared by the scorer of the Athletic Club of Philadelphia, Mr. McBride of that Club takes the lead in the pitching record of the season, Bond being second and Spalding third.

—Base ball on the ice was a feature of the Winter sports on Prospect Park, Brooklyn, on January 9th, a game being played on the north end of the large lake between tens selected by Barnie Barnes, the former side winning by a score of 20 to 7 on a five innings game. In consequence of the cold and chilling atmosphere it was agreed among the players to have only two outs to an inning, and five innings for the game. Next Saturday the return match will be played, when Messrs. Barnie and Bunce hope to present two strong teams of ball players and skaters. The large lake at Prospect Park has been set apart for the Winter for the exclusive use of ice skating, ice hockey and base ball clubs, no skating being allowed on the lake except by those engaged in the games.

—The St. George's Cricket Club has elected the following officers for the ensuing year:—President, John G. Dale; Vice President, George F. Green; Secretary, W. R. Bowman; Treasurer, C. Vinton; Executive Committee, W. R. Bowman, E. H. Moran, J. B. Sleigh, J. T. Soutter, V. Satterthwaite.

—Curling has been fully enjoyed at the Park lakes since January 8th, the following contests having taken place:—

January 9.—St. Andrew vs. Vianhoe, at Central Park.....	39—43
" 9.—New York vs. Thistlet, at Central Park.....	32—33
" 9.—Caledonian vs. Empire City, at Central Park.....	17—53
" 11.—Fifehead vs. Dumfrieshire, at Central Park.....	31—29
" 11.—Dumfrieshire vs. Fifehead, at Central Park.....	29—31
" 11.—New York vs. Thistlet, at Central Park.....	38—29
" 11.—St. Andrew vs. Vianhoe, at Central Park.....	31—31

—Brooklyn has an Ice Boat Club and the scene of their sailing and racing is the large lake at Prospect Park. The club members own four boats, viz.,—Mr. Culver's Icele, Mr. Decker's Flyaway, Mr. Chadwick's Lady of the Lake, and Captain Hall's Nondescript. On Saturday, January 9, the club had its first race of the season, the contestants being the Icele and Lady of the Lake, each sailed by their respective owners. The prize was a club pennant. Soon afterwards the wind became too high for safe sailing, and the boats went to harbor. With the thousands of skaters on the inner lake, the Ice Boat races, and the base ball match on the large lake, quite an attractive scene of Winter sports was presented at Prospect Park on Saturday last, the weather and ice being very favorable.

—Messrs. A. B. Purdy, Robert Waller, Jr., and W. Iselin, amateur athletes, tried their speed at the Mott Haven grounds last Saturday. The competition originated in a bet of \$50 between Purdy and Iselin that both Purdy and Waller could beat Iselin in a hundred yard run, the three to start together and make it the best two out of the three. The principals went into training to prepare themselves for the event. The contest proved Mr. Waller to be the most fleetfooted, he having won the two first heats, while Mr. Iselin beat Mr. Purdy. The last heat was run in 114 seconds.

—The grand "bonspiel" came off at Hamilton Bay, Canada, last week, 92 rinks, 308 curlers—the largest gathering of curlers ever brought together on this continent. Ice splendid, weather cool, no confusion, and everything satisfactory. Canada East got a total of 1,102 and Canada West 1,115, winning by a score of 13; close play.

—The Canadian Curling events of 1875 include the series of contests for the Governor-General's medals, the rules for which are as follows:—All the regularly organized curling clubs of Canada who may wish to compete, to do so during the week beginning Sunday the 17th, and ending Saturday the 23d January, according to rules (printed separately), and the two clubs who make the highest scores to play against each other two rinks, according to the rules for District Medals. R. C. C. C. (vide page 12, R. C. C. C. for 1874), on some covered or open rink, which may be fixed upon as nearly as possible equi-distant from the competing clubs. The match will be played during the first fortnight of February. Returns of the score, with the following information:—State of the ice, whether played with "granite" or "iron" stones, whether played on open air ice or in a covered rink, to be sent on or before the 30th January, to Capt. Fredk. Ward, A. D. C., Government House, Ottawa.

—The contest for the Gordon Medal and the Championship of the West will take place in the city of Detroit on January 19th. Each club west of Albany belonging to the Grand National Club is entitled to send one rink, and only one, to compete for the medal. Those clubs who intend to be represented will please inform Peter Young, Esq., Detroit, of the fact, so that they may be notified in case there is no ice in Detroit at that time. The Western Match between the north and south of Scotland take place immediately after the Gordon Medal Match.

—The Red Jackets of Toronto beat the Toronto Curling Club last week, having a majority of seventeen shots.

—On the 29th ult. His Excellency the Governor-General of Canada, played a single-handed bonspiel with Mr. Hutchinson, of the Public Works Department, Ottawa, for a sack of flour, to be presented by the loser to the Protestant Orphan Home. The result at the close stood four points ahead in favor of His Excellency, the game being 21 points, three pairs of stones each.

Billiards.

THE PROFESSIONALS IN BROOKLYN.—The scores of exhibition games played by New York professionals in Brooklyn last week, terminated on Saturday night. The full score of the tourney is as follows:

Name.	Garnier.	Vignaux.	Daly.	Rudolph.	Ullmay.	H. Dion.	James Wom.
Garnier.....	1	1	1	1	1	1	1
Vignaux.....	1	1	1	1	1	1	1
Daly.....	1	1	1	1	1	1	1
Rudolph.....	1	1	1	1	1	1	1
Ullmay.....	1	1	1	1	1	1	1
H. Dion.....	1	1	1	1	1	1	1
James Wom.....	1	1	1	1	1	1	1
Games Lost.....	0	0	0	0	0	0	0

The play, as a general thing, was not up to the mark of the New York tourney, but it was a fine exhibition. The best run of the tourney was Daly's 121 in his match with Rudolph, and the best average was 144 made by Garnier in his match with Daly, Vignaux making the next best average, 13. 1. Garnier showed the best play, and he bore off the honors.

THE AMATEUR CHAMPIONSHIP OF LONG ISLAND.—On January 15th the game for the three-ball championship between Pikett and Pfaukucken is to be played at Samuel's room.

GARNIER'S LAST CHALLENGE.—Albert Garnier, under date of January 6, challenges the winner of the match between Vignaux and Rudolph for the American French championship No. 2. This is for the medal held by Vignaux, and has no reference to that other match between Rudolph and Vignaux for the cup held by Rudolph.

THE GAME IN JERSEY CITY.—Randolph, winner of the local champion, presented by G. E. Phelan, has been challenged by Norman Rowe, and the game is to be played on Friday night of the present week. The winner of the pending game has been challenged in advance.

New Publications.

PRAIRIE AND FOREST. By Parker Gilmore: Harper & Bros. 1874.

Mr. Gilmore is a roving Englishman, who writes pleasantly upon sports, subjects, and with less of what Lowell calls "a certain coarse sensation in foreigners," than most of the Bull family are able to command. He has, as we gather from his books, hunted and fished through North America, from Maine to the Rocky Mountains, and appreciates the great variety of game to be found on this continent. His descriptions of birds and beasts are generally accurate, and are written in a lively manner. He is, we think, the first European who is willing to admit the superior size and quality of many of our animals over those of Europe. Most writers adhere to the theories of Buffon, as to the inferiority of animal life in America, ignorant that the facts are the other way, and that many of our carnivora are larger and fiercer, the beasts of chase and the game birds more numerous in species and more valuable, and that in the sporting and edible fields we surpass Europe as much in excellence of quality as in variety of species. Mr. Gilmore's remarks upon the salmonide we think open to criticism; indeed his conclusions are wholly erroneous. He sees no difference between the Canadian sea trout and that of Europe, though the former is a red spotted fish and the latter not. From his description of our brook trout, which he thinks is the European char, we might have had a sea trout before him when he wrote, since he describes "a back of mackerel, green." This idea of our trout being a char, is probably got from Colonel Hardy's "Forest Life in Acadie," from which also he has taken the best of the illustrations of his book. He seems to think that the American brook trout has usually been confounded with the European species, and mentions a young naturalist from Yale who supposed them to be identical. A very young naturalist he must have been, since Agassiz, as long ago as 1850, wrote that all the species of fresh water fishes in North America differ from those of Europe.

In the Western States Mr. Gilmore finds, as he thinks, some rare and undescribed fishes. One—the paddle-nosed or spoonbill sturgeon, *Polyodon pallasi*, Lacépé, among the dogs, *Canis lupus*, Gmel., both of which may be found in the books. Indeed, the first was mentioned by Father Hennepin, who saw it in Lake Pepin in 1680, and "thought at first that it was the devil."

Mr. Gilmore, being a good angler, appreciates the value of our black bass, which perhaps he rates too high, in preferring it as a table fish to the brook trout; as a game fish, pound for pound, it is probably as effective as the trout. The cut which gives us the high of the brook trout; the horns are big enough, but in their shape and direction they belong to the lox.

Mr. Gilmore is rather fond of showing his scientific knowledge in contrast to the ignorance of the Americans, and sometimes his own is at fault, as when he writes *Salmo fario* and *Salmo trutta*. He writes of the quail, or partridge, as the "doubtless" its scientific name. To be consistent he should have described his prairie hen and partridge shooting as the pursuit of the Cupido and the Bonasa, since both of those birds fly under various local names.

MAGAZINES.

The *Maritime Monthly*, a magazine of literature, science and art, published at St. John, New Brunswick, enters with the January number upon its fifth volume. It is a creditable exponent of the progressive characteristics of the Dominion. The leading paper in the number before us is on the "First Courts and Early Judges of New Brunswick," and its general contents are varied and well written. We cordially commend its management to our readers, and will realize our hope of seeing nearer together the people of two adjacent countries having strong commercial affinity. Terms, \$3.25 per year. Address *Maritime Monthly*, St. John, N. B.

The *Galaxy* for February is replete with a choice assortment of good things, and they are so varied that they must suit every phase of mind. The *Galaxy* has assumed the garb of Exterior, judging from its strong effort to secure a large foreign readership.

The *Clipper Almanac* for 1875 is about as interesting a little work in any of its class we have required. It contains many facts, and a comprehensive sketch of the drama in various countries.

The Horse and Course.

—Barnum's effort to popularize trotting by giving a purse to be trotted for at the Hippodrome, was thoroughly appreciated by a large audience present at the Hippodrome Thursday evening. The purse was one of \$175, for horses that had never beaten three minutes, mile and repeat, in this race. The bay geldings Sherman, Hippodrome, Longfellow, John H., the bay mare Lady Trimble, and the chestnut gelding Bayside started. Bayside won the first heat in 3:01, and the fourth and race in 2:49. Dan Mace won the second heat, with Hippodrome, and John Murphy the third heat, with Sherman in 2:56. Dan Mace's head, boy, Knapp, rode Hippodrome in the first, third and fourth heats. Both Mace and Murphy elicited loud applause by their superb riding, and there is but little doubt that one of them would have won had their horses been as steady as Bayside, who was not accused of a particle by the applause, while the others, including John H., who was ridden by Campbell, could scarcely be kept at a trot.

—Two trotting matches came off at Oakland, California, on the 29th instant. The first, half mile heats, between three wars won by Ned, and the second by Selkirk. Best time in both races, 50½ and 40 seconds respectively.

—A young jockey in California, who has ridden horses in several races during the past two years proved to be a girl.

—Colonel W. H. Johnson, of Tennessee, has been elected President of the Nashville Blood Horse Association.

—Mr. S. R. Keene, of California, has purchased the interest of Messrs. McCord & Malone in the trotting station Sam Purdy for \$25,000. As the interest of the latter gentleman was a half ownership in Purdy the latter may be said to be worth \$50,000.

—The following is a list of the subscribers to the "Great Central Four Mile Heat Race" for a purse of \$5,000, being a post stake to be run for at Monmouth Park, Long Branch, N. J., during the first race meeting at that place in 1876:—

A GAME PARADISE.—Sergeant Ellis of the British Boundary Survey, gives some interesting facts about the country he has visited. He says that the grandeur of the scenery and the abundance of game renders life in the distant West one of unusual interest and excitement. He states that a part of their route east of the Rocky Mountains, the buffaloes were so numerous that the men could shoot them without leaving their wagons. At Sweet Grass Mountain these animals predominated to such an alarming extent that the men were under the necessity of forming a circle with their wagons, and placing their horses on the inside, to protect them from the occasionally charged animals. The company had two horses killed by them, and one of their astronomical party came near losing his life on one occasion. As far as the eye can discern along certain parts of their route, the prairie could be seen dotted with the dead bodies of buffaloes which the men had shot for the sake of their tongues, which it appears are considered a great delicacy by the prairie aborigines. The speaking of White Mud River, he says the company were under the necessity of traveling some ninety miles north along its banks before they could find a crossing place, in consequence of the quicksand in the bottom. At one place at which they halted along its bank, one of their teamsters narrowly escaped a subaqueous torment. The water looking nice, he thought he would indulge in a bath, but on entering he soon found the quicksand up to his knees. He attempted to extricate himself, but the harder he tried the more quickly he descended. No sooner did his comrades become aware of the dangerous nature of his predicament than they made all haste to the rescue, and throwing him the end of a rope, he passed it round his waist and was dragged ashore. He is not going to try bathing in that river again. In the mountain streams is an endless variety of fish, among which is a kind of speckled trout, very much resembling our Canadian trout, to which it is allied, and having black spots on the sides instead of red, and possessing an exquisite flavor. Wild sheep and mountain goats are numerous. The sheep have immense horns, by which they are enabled to cling and drop from crag to crag along the mountain sides. In hunting these animals the hunters are generally obliged to ascend into lofty and precipitous heights. Amongst other animals in this region is a kind of mountain lion, said to be very fierce. North of the Bear Paw Mountain, they came upon the dead bodies of twenty-eight of the Blackfoot Indians, who, it appears, had been on a horse stealing expedition, but were overtaken, killed, and scalped by another hostile tribe. They then occurred early last Spring.—*Geological Mercury.*

—This story is told us by a gentleman who says its truth is vouched for by witnesses of undoubted veracity.—Some years ago, while Mr. Hamilton was fishing near the lower rapids of the Mississippi, just above the Kakuk, he observed below him a man bailing a canoe, preparatory to taking himself, wife and baby across the river. At the same time Mr. H. saw that his Newfoundland dog was watching the proceeding of the party. Seemingly to comprehend their intention, the dog uttered a peculiar howl, and passing rapidly up the river for some distance, plunged into the water and swam diagonally down and landed on a large rock standing out of the water about midway the stream. After shaking the water from his shaggy coat, he again watched the party, who, in the meantime, had embarked in the canoe. Just as the little boat passed the rock, it was caught in the rapidly descending current and instantly capsized. The woman, in falling into the water, loosed her hold on the child, which floated down the stream. The man caught his wife and waded with her to the rock. The instant the child fell into the water, the dog leaped in, and in a short time was seen in the still water, close to the child, with his mouth which he carried in safety to the shore.—*Franklin Patriot.*

—A poor young man remarks that the only advice he gets from capitalists "is to live within his income," whereas the difficulty he experiences is to live without an income.

ILLUSTRATED NATURAL HISTORY.—The following testimony to the truthfulness and value of "Hurst's Views," merely superfluous and the expressed opinions of many of our reviewers, who delight in the practical natural history. The views are taken from mounted specimens in life-like attitudes, with a landscape in exact imitation of the native haunt of the bird or animal. We refer to the advertising columns of the FOREST AND STREAM for list of views and prices.

SHAKOPEE, Minn., December 30, 1871.

EDITOR FOREST AND STREAM:—

The twelve "Hurst's Views" received this morning and I must say that they surpass anything in the stereoscope line I ever saw. It is better than going to a menagerie or museum, as here you see the birds in their natural state. It brings the true sportsman immediately amid scenes wherein he loves to dwell, and during the close season he can be constantly reminded of the many happy days he may have passed in the field.

C. A. S.

SPORTSMEN DO NOT SMOKE VANITY FAIR.

CUT CAVENDISH.

It is manufactured from the most expensive leaf; is particularly adapted to Meerschaum and Cigarette Smoking; does not burn or make the tongue sore, is unlike any other tobacco.

NEW ORLEANS, January 8, 1875.
Messrs. William S. Kimball & Co.:
GENTLEMEN:—Upon examining the state of my Vanity Fair can, I find the bottom smooth as usual.

Please send me two pounds this time by mail. Permit me to say I am perfectly delighted with it. I am quite a connoisseur in smoking tobacco, and you know the infallible test of any smoking brand is to compare them with Perique. I think your Vanity Fair the best smoking tobacco I have met with yet. I am sorry to trouble you with a small order, but trust ere long you will have large amounts sold here. I remain your truly,
R. B. MARTIN.

19 Maiden Lane, 20 & 22 John street, N. Y.
BREECH LOADING GUNS
A SPECIALTY.

We would call the attention of the public to our large assortment of

Breech-Loading Shot Guns,
Manufactured by the following celebrated makers: Messrs. W. & C. SCOTT & SONS (winners at the International Gun Trial of 1873); P. WEBLEY & SON, W. W. GREENE, WESTLEY RICHARDS, J. HOLLIS & SONS, and other makers.

A full line of fine
PISTOLS AND RIFLES CONSTANTLY ON HAND.
BURNS & HANCOCK'S SHOOTING TACKLE.
We have good shooting from Breech-loading Guns, we would recommend the use of the

STURTEVANT BRASS SHOT SHELLS,
manufactured by the Union Metallic Cartridge Co., Enbridge, Conn. These shells are the cheapest and best in the market, can be easily re-capped with ordinary caps, without the use of the implements necessary in priming all other styles of shells.
BUSSEY'S PATENT GYRO PIGEON AND TRAP,
WITH CASE, AND 100 BIRDS.

Black's Patent Cartridge Vest.
This Vest affords the best arrangement yet in rying cartridges. So evenly distributed securely felt, they can be carried with the vest, which is of great importance when carrying head up the weight forces the wad bad shooting is the result.
In ordering send measurement around the chest. Price \$7.50.

AGENTS FOR THE
Union Metallic Cartridge Company's Ammunition,
WARRANTED THE BEST IN THE MARKET.

NEW YORK, THURSDAY, JAN. 21, 1875.

Volume 3, Number 21.
17 Chatham St. (City Hall sq.)

From the Harrisburg Telegraph. TO A FAVORITE DOG-DYING.

BY ONE OF THE CANINE MUSES.

"FAREWELL! Farewell! but this I tell
To thee, thou wedding guest,
He prayeth well who loveth well
Both man, and bird and beast.

"He prayeth best who loveth best
All things, both great and small;
For the dear God that loveth us,
He made and leavened all.—Ancient Mariner.

I.
Humble, gentle, suffering creature,
Though unlike in form and feature
To our race,
Nathless to my simple seeming
Thou hast human fondness beaming
In thy face.

II.
Father, mother, child and servant
Sorrowfully stand observant
Of thy pain;
Pitifully strive to heal it
(Almost as thyself they feel it),
But in vain.

III.
Heav'n above us and above thee;
Does the God who loves us love thee?
Who can say?
Close beside us thou dost follow;
Can such sympathy be hollow?
Surely nay.

IV.
Can the law be so uneven,
To deny all chance of Heaven
To thy kind?
We had rather much receive it,
Than to coldly disbelieve it—
Thou hast said.

V.
Can great nature's God unjust be?
Heaven for all chance of this—there must be
Room for thee.
In the fair celestial region;
With us last is my religion;
Come with me.

J. W.

For Forest and Stream.

Three Weeks on the Magnetawan

AT THE BEAVER DAM.—NUMBER THREE.

"DID you ever see any beaver in any of your trips, Frank?" inquired Ned of me one morning after breakfast. "I don't mean dead ones, but a regular nest of 'em that never were meddled with by traps."

"No, but I have often heard of their curious habits and homes," answered I. "There are not many found in the Status East of Colorado now, I believe; it must be a queer sight!"

"I don't see a great deal of difference between them and the muskrats you see so many of at nights," rejoined he. "They're bigger, of course, and pay me better, for their fur's worth twenty times that of a rat, but they live like each other nearly, and look the same a little ways off in the water."

"Do you trap many up here?" asked I, for Ned's stories possessed an air of *reality* that was very interesting, and I enjoyed drawing him out.

"Y-as," said he, slowly, as if about to commit himself on the subject. "I get some every year, but I know just where to go, and sort of raises my crop from Spring to Fall, and that saves trouble in gathering of it," chuckling to himself, then turning to me, he continued: "If you like, and will keep quiet about it down in the settlements as you go out, I'll show you some beaver to-day, and maybe give you a chance at some deers; it's a grand place for 'em up there."

"Up where?" demanded I. "I want to see beavers bad enough, but I don't care about a ten-mile tramp until to-morrow, for I suppose we'll have to travel through brush and over rocks, as usual, when we leave the boat. How far is it?"

"Now, I expected you'd think it was a long ways off,"

answered Ned, getting on his feet. "You remember the spring where we drank after chasing the fawn yesterday; he!—he!—(chuckling again)—it makes me laugh to think, of that fun, how the little thing did jump. Well, there's a path comes out there that runs back, I guess, near to Nipissing; we'll follow that up and strike the meadow in half an hour, and I'll warrant you'll be glad you went. It lies about three quarters of a mile from Shesheep thataway," pointing northwest.

"Only an hour's time, you think, from camp? Well, suppose we keep quiet until after dinner and go then," said I. "That'll be time enough, won't it?"

"Plenty, plenty," rejoined he. "You won't want to stay more than an hour, but it's as pretty a spot as I know of hereabouts, so we must allow for your wanting to look it all over."

The morning slipped away in idleness, and when dinner was over Ned laid the birch in the water, and putting in the axe, called to me to come.

Heading our boat up and across the lake we soon reached the spring, and then lifting the canoe out, laying it bottom up on the bank, we took our guns and prepared for our walk through what I afterward found to be the densest growth of brush I ever saw. Ned started in first, and being delayed by tying the string of my mocassin, he was hid from sight. Before I could follow back he came, however, before I was ready, and pitching the axe on the ground near me, blurted out:—

"Dang the thing in the brush, anyhow! 'I'll leave it with the boat, I guess, after all."

"What's the trouble now," asked I. "You'll want it to cut up that deer I'm going to kill, and it won't do to be without the axe."

"Well, I shan't lug it along," rejoined he smartly. "I slipped up just now in there and near sat down right on the edge; I guess we shan't want it after all, and its unhandy with my gun to carry through such a thickset; if you're ready, suppose we go?"

"Heave ahead, then," said I, laughing, "and look out for my eyes with the branches."

Plunging into the thick undergrowth that skirted the shore I followed behind in his search for the old path—what do I say! Path! There was no path! About every ten rods, if you looked sharp, you might have seen an old blaze on a tree on either hand, or else a small one cut off entirely, forming a stake, but the cuts were made so long ago that the moss nearly covered them, or they had become black with age and discolored sap. Old windfalls without leaves, and new ones with thick branches and foliage lay across the path; large rocks stood in the middle of it, and old broken stumps around it. Looking ahead you could not trace its direction, while the soil underfoot was unbroken, save by the occasional track of some animal. Twice we were bewildered completely, and then I would sit down and let Ned skirmish around to find the sign, starting again at his call, from some unexpected quarter, for me to follow. We were fully one hour getting over that three quarter mile, and I was beginning to consider the whole thing a delusion, when Ned, who was in advance, suddenly made a frantic grab at some bushes with his un-employed hand and simultaneously slid into a small muddy hole concealed by dead leaves and moss.

"Now," growled he, drawing his leg out of mud nearly to the knee, "I've found it at last, I reckon. I thought it wasn't far away; see there," pointing off in the brush. "Them pools are made by the outlet of the dam, and it 'aint more than thirty rods off. I'm all right now, but look out you don't slide in when you come over," so saying, he scraped off the mud and picked his way across, followed by me.

A few minutes struggle with the branches and I could see an opening in the leaves ahead, and knew we were near the meadow.

"Whist!" said Ned, in an undertone, as I stopped near him. "If we go still we may see some beavers on the dam and maybe a deer in the grass; look out for the small sticks, and if you shoot, remember me ahead."

Creeping cautiously along we were soon at the edge of the opening, and what a picture it was! Right before me was erected such a perfect dam across the small sluggish stream that I mechanically looked for the homes of the men who had built it, but saw nothing except the tall green grass of the meadow, through which the stream crept, on its way to the lake we had left coming from the one whose blue water I could catch glimpses of nearly half a mile away. At the lower end of the opening, where we were crouching, the beavers had erected the dam, twenty feet or more in width. The stream thus interrupted flowed back, forming a pool, as near as I could judge, about forty feet long, and at the deepest not over four feet. It was clear of all grass, except at the upper and shallower end, where the current came in, which was so slow as to cause no perceptible motion; the only noise was the dropping of the overflowing water below the dam, which formed the succession of pools into one of which Ned had put his foot when coming up. I looked everywhere for the animals themselves, but could see, to my regret, neither any beaver, or what surprised me more, any houses. Fresh green stalks were floating, showing recent work on their part, and I noticed discoloration in the water, but no life. Disappointed, I turned to Ned for an explanation, and saw him scanning the upper weedy part and the bed of the little stream; in a moment he "bobbed" down, and with the motion, I saw a disturbance in the grass at that end, and was gratified to see an animal resembling an overgrown muskrat, in all that I could observe, sink into the water and swim directly towards us, showing only his head, but leaving a "wake" behind from his flat "rudder." Just as I was certain of a good square sight at him, without any seeming alarm from us—for I, for one, was verily holding my breath—he sank like a stone, so silently that he seemed to melt from our sight. Expecting his re-appearance every second, I never moved, when, to my horror, Ned arose from his stooping position and deliberately commenced to cross on the dam.

"Hold on," called I. "We'll scare them all if we show out, so let's wait a little."

"No use now," answered he. "There 'aint many around, and you'll only waste time. I want to show you the dam and then go on to the lake beyond; see there!" pointing downward, "aint that curious work to do with teeth and tails; see how they've cut down trees from each side for a brace and then dragged the smaller ones over. I've built many a corner for a cabin myself, but never see logs lay better than them. The limbs are gnawed off close, and see how the water has sucked the trash and mud between the chinks. They're about as cute things as ever I see; there you can see how its been slapped down and dried, and how little water leaks out. I should like to see them at work some time."

"What became of that fellow that went down just now?" asked I. "I don't see any houses or place for him to hide, and he's been under now over five minutes."

"He's safe enough somewhere," replied Ned. "They stay under like a frog, but he's heard us, I guess, and swum back up among the weeds, or in some place under the dam; its curious how they stand it, but they breathe somehow. I heard 'Lame Joe' down in Maquabee's camp tell how he saw a moose stay under once long enough, he said, to drown him; he waited until he came out and then lost him, but I think he was lying, for he said, 'near hour,' and I guess 'twant twenty minutes, after all."

"Moose here?" exclaimed I. "That's news to me!"

"Twant near here," replied he; "there's no moose short of the Nipissing line; Joe's tribe come from up there."

"How long has this colony been in here?" inquired I. "I don't see any houses."

"They'll be up before Fall," answered Ned. "I was traveling through here near May, I think, or last of April, and I see the dam was just begun, so I kept quiet, and mean to get all the fur myself next year if John don't find it, but he won't leave his canoe unless he has to, so I'm safe enough, I guess. I know of some more down near Omie that's a bigger family than this."

Crossing over on the dam, we examined the tracks on the edge and then sat down to rest and speculate on the wisdom of the creatures in thus artificially preparing a retreat from their foes. I cannot remember his exact expressions in regard to the work of the beavers then before us, but he intimated that he considered by his quaint ideas to the wonderful instinct displayed by animals that, to use his expression, "seemed to reason like a man." The squirrels with their Winter's store of food, the duck or partridge leading him away from her young; the dumb language in the expression of his dog's eye at certain times, and the cunning of the creatures he trapped, were all commented upon, and although my study and different life made me feel and know more distinctly that influence upon brute and man, to the source to which they all owe their origin, and return, yet I could but let his shrewd questions and statements remain unanswered, for his simple metaphysics were even stronger than mine.

"Suppose we cut across the meadow and take a peep at yon lake," said he, rising; "it's a pretty a piece of water as we have hereabouts; be ready with your gun as we go up the creek—(using a Yankee word)—if there's any deer they'll jump away mighty quick."

The grass in some spots grew up to my waist, and as we picked our way across the little hummocks, I looked more than when I was to take my next step than along the sedgy stream.

"Ah!" exclaimed Ned, under his breath, as there was a rush in the grass, and stooping down, bowed his head nearly to his knee, "shoot quick," (to me), but before I could get my rifle into any kind of aim, into plain view came a noble buck that, without a halt, leaped gracefully away over logs and ground to the shelter of the alder brush beyond. As he reached the cover, I heard the shrill whistle from Ned's fingers in his mouth and instantly the deer stopped, and I could just see the red patch of hide among the leaves; the distance was too great for me, and I fully expected Ned would try to get nearer, for he was in advance, but his rifle was raised to his cheek, and with the light crack that a Ballard makes, the spot vanished, as I thought, unharmed. Sliding in a carriage Ned sprang across the brook, alighting in a foot of water, and called to me to follow.

"What's the use?" cried I. "The deer's gone."

"No, sir-ee," answered he. "That fellow's so dead he never moved; come across and let's look at him."

Returning to the dam, I crossed again, and following the line of his shot, found the deer doubled up under the bush, having literally dropped in his tracks; there was the small hole back of the shoulder, from which blood was oozing in drops, and the beautiful object that five minutes before was so full of life was now a shapeless mass, and protruding tongue—dead. How quick the transition had been!

"Will you believe me now," laughed Ned, drawing his knife over the deer's throat and turning the head down. "You kin see he never turned round by the track; that blood's too black for that; one, two, three—(counting)—four spikes, and look how his hoofs are worn; this meat won't be very tender, Frank; he's been run too hard by something or other; its an old deer, for all of his spikes. Lay still there till we can get back from the lake, old man, and then we'll cut 'em up."

"How about the axe, now?" said I. "You were to bring that and let me kill the deer, and you've done neither, but if you hadn't shot he'd been running yet, I think; let's go on."

We were soon out of grass and among the tall pines that skirted the shore of the lake; the ground was covered with quantities of "needles" that made it very slippery, and was so soft from underneath that, with glazing eye and protruding tongue, the water lapped the beach softly, uniting with the low hum of the pines in one of nature's best duets, praising her own charms. The air was cooler there in the shade and laden with delightful fragrance, for the day had been warm and still. How wild everything seemed, and yet how natural! A pair of loons were floating, within easy shot, as unconscious of my presence as wooden decoys would have been. Ned lingered behind examining some sign he had discovered and I had the picture of a man with glazing eye and protruding tongue, and was very green. I was not surprised to see another deer wading, nibbling here and there, and seldom raising his head. It seemed perfectly in keeping with the place for him to be there, and it wanted only an Indian in his canoe to complete a picture I had seen years ago in my book at school representing the wilderness, drawn from the artist's imagination, and that I had thought existed there alone, but here it was before me!

"Aint it a pretty pond," said Ned, coming up behind. "Very few have been here, and it's a grand place for deer; see you's one in the water, and likely there's more round the point; mind the loons here to the left, and see the flappers in the cove across," pointing to some young ducks. "If you want that deer you can get him as he comes around, but you must go now."

"See here, Ned," said I, "I'm not going to lug more than a quarter of that venison we've got already, through that confounded brush back to Sheshegan, and can carry more than two, so what's the use of killing another; let's start him up and let him run, it'll be one more for next year."

"Just as you say," replied he. "I never like to kill more than I want, but you'll never miss him next Summer. I supposed you'd like to kill him anyway, but let's go back and dress mine."

Back we went to where the buck lay, and together dragged him to a limb strong enough to bear his weight. Cutting some of the cedar to use as a sled, Ned twisted a strong rope, and passing one end through his "gambrels," we knotted it and hoisted him up head downward. I rested my gun against a tree, and while Ned attacked the deer, dropped down on some moss near by to rest, for my walk had tired me and the day had been very warm; the air was laden with the incense of the forest and made one feel disinclined towards exertion of any kind, so I lay on my back with half shut eyes watching the trees and running over in my mind the events of the day.

Since I first took to the woods, years ago, when a boy, I have delighted in the forms of trees; their diversified characters repeat what we see in our own human lives every day, and the simile never seems unnatural to me. Whoever is reading this has no doubt often stood as I have done, close to the trunk of some giant of the forest, and looking upward has seen its hundred arms stretch in every direction to catch the sunlight and the rain that will feed and give life to the forest. I like to stand in the shade of a tree, and watch it for the Winter's trials. How wonderfully it tapers from the massive trunk to the topmost little spray, and yet

it has been scientifically proved, that trees grow as some men die—from the top downward! Did you ever read the lover's story in Tennyson's "Talking Oak" without feeling how little it was removed from reality? When you are deep in the woods on some of your excursions have you never thought of those expressive lines of our own Longfellow?

"This is the forest primeval, the murmuring pines and the hemlocks,
Bearded with moss and age-indented to the twilight,
Stand like Druids of old with voices and prophecies,
Stand like harpists who with hands that rest on their bosoms."

Ned has not finished the deer yet, and I go a little further. Longfellow's name brings up to us the most beautiful story, taken in all, of our American continent. What—"Evangeline!" In a country, almost on a parallel with our camp on Sheshegan was her home before the exile began. She grew up there the pride of Grand Pré, and just when the world was bright and full of promise to her, persecution came, and the agony of her life began. Her father is at rest, with the sea nearly covering his grave, and with the affection that "loyal and true" men have been patient to keep her heart from breaking, she wandered on her fruitless search for the lover she never saw again until the plague was taking his life away, and her's was very near its end. She must have passed near this spot in her wanderings, for rumor said that Gabrielle had become a "bour-de-Boise," and we will imagine she came here on her search. How these old trees must have grieved to have seen the streaks of gray on the yet youthful forehead, for what could have been a sadder sight! She has been away up in the Michigan forests and found nothing but the ruins of the hunting lodge, and with utter despair in her heart is now striving to find rest under the veil of the Church in Philadelphia. Were not the birds with their songs and the beauties of the earth and sky but mockery to her with her sorrow, and the goodness of all things bitterness to her heart? Your spirits and mine, friend, are burdened with little care in the wilderness, and it is well that it is so, for there are few places that a person, whose life is to be in when bowed with care and grief than in the shadow of these great trees. You and I might have been tempted to curse God and die, but the mists of her own desires have fallen from her eyes, and with the resignation and peace learned in her childhood from Father Feltman, she is going where she can find rest in alleviating the sufferings of others that she can understand so well.

Her wanderings o'er land and water are over, and she is waiting for the release that unconsciously she sought. Here Leblanc is dead, and with him all the friends of her youth, and if at all remembered, but as a dream. What a world of feeling is in that cry of anguish and the clasp of the dying man when it can bring to his last hour the vision of his early days when he in old Acadia, and peace to her eventful life!

The trees in the spacious yard of the hospital at Fourth and Spruce were whispering and nodding to each other this Summer the same as when they cry, "I never pass the spot without stopping for a moment to look on the few that still stand and think of the changes since then. They are older and stouter, and have kept their places in the city, as perfect specimens as their fellows that were whispering above me when I lay resting near the Beaver Dam."

Evangeline's story is but the imagination of a gifted man, but in how many ways it can be applied to our advantage. Some may see nature in little things, which others see beauty and thought even in a single leaf; but there is nothing more interesting to me in the study of the book of nature than the wonderful tree forms. From the slender delicate sprout a foot high, to the immense oak or pine, I wonder how they will look centuries hence if undisturbed!

"You take the shoulders and go first; I'll follow 'till the quarters," called Ned, bringing me up with him. "We'll try to leave the rest to me. I don't know what you're likely to do. Go easy, and mind you hold your gun ahead. It'll be heavy walking back."

"I should say so, my friend," rejoined I, remembering our coming in, and now I had twenty-five pounds or more additional. The lake was reached in safety, except that I fell once, bringing the shoulders down on my own head with a force that made me think Ned had shot me; and with the venison stowed and skinned "camp" and in our boat, I felt better for the sight of the day, and was amply rewarded for all toil by my experience at the Beaver Dam.

Muse

For Forest and Stream.

HUNTING IN ALABAMA.

SEEING in one of the late numbers of FOREST AND STREAM that attention is being drawn to the wilderness regions of Alabama, and as I have lately returned from the above mentioned locality, I have thought that a few jottings on the subject might prove interesting and useful to sportsmen at large, and to those in particular who contemplate hunting in Alabama during the present Winter.

Choctaw county, Alabama, lies between the Tombigbee River and the Mississippi line. The famous Sumpter county lies just north of it, and Washington county on the south. Marengo county is east of it, on the other side of the Tombigbee River, and all these counties are equally as wild and as sparsely settled as Choctaw. The lower edge of the county is about eighty miles north of Mobile, as the crow flies. The Tombigbee river is there, which is a little more than half the distance to the Gulf of Mexico. The nearest railroad and stage station is at York, Sumpter county, Alabama, distant thirty-eight miles. There are several other towns of very moderate size in Choctaw county, the principal of which are Bladen Springs, Mount Sterling, and Tompkinsville.

The routes most favorable for getting into this country are, from the North and East, via Montgomery, Alabama, where you take the Western Alabama Railroad to Selma; change cars there, taking the Alabama Central to Demopolis, or, if the boat be not there, to York, Alabama, where a team can be hired to carry you through the woods and swamps and over the hills to Butler. If the boat be at Demopolis, stop there, and go down the river (Tombigbee) to Tuskoloma, where a conveyance can be procured to carry you to Mount Sterling or Butler, the former distant four, and the latter eight miles.

From the West you go to Indian, Mississippi, which is forty miles from Butler, and you can take the car thence to York, Alabama, or hire a saddle and drive over to Butler.

The most pleasant way is from the South. Go to Mobile, and there take the boat up the river "Bigbee," as they call it, to Bladen Springs Landing (Bladen itself is four miles from the river; conveyance thither from the landing can always be procured from Mr. Heron, who owns the warehouse there and keeps the landing), or on to Tuskoloma Landing, as before. At Tuskoloma, Mr. Henry Choctaw, the proprietor, will give every information and afford every facility to the visitor.

If you stop at Bladen, that staunch sportsman and magnificent shot, Mr. James T. Staples, will be sure to show the sportsman plenty of game, and take pleasure in making his stay agreeable. I must not, however, forget my friend, Dr. J. S. Evans, late County and Probate Judge of Choctaw. This veteran sportsman likes the music of the hounds as well as ever, and although he has fallen back upon his favorite old barrel and buckshot, the Doctor can, with his glasses on, make a buck as neatly as most of his neighbors. The visitor will find him a cordial, warm-hearted gentleman, who will do all he can to make his sojourn agreeable and profitable.

At Bladen there is a hotel, said to be a good one, for Bladen is quite a place of resort for the pleasure seekers of New Orleans and Mobile, its mineral springs being famous for rheumatism and other ills that flesh is heir to. I believe there is a hotel in the county. If the visitor goes to Butler, he will be sure to be treated with kindness of the people. There are some who keep what is called "a house of entertainment," where the traveler can obtain food and lodging. But with the exception of Mr. Spangenberg, no one entertains except during court. After a few days the sportsman will probably be taken in hand by the members of the Hound Dog Club, all of whom are gentlemen as well as sportsmen, and will take the pains and have pleasure in making the stranger comfortable. The most prominent of these gentlemen are Mr. Wm. C. Nathan, Dr. Britting, Dr. Mills, and Mr. Yeatman, the editor of the Choctaw Herald.

Speaking of the Hound Dog Club, I must give the origin of the title, for there is no actual club in existence at Butler, though some dozen or so of the gentlemen have a cabin at "Bucks-nort," some seven miles from Butler, where they camp hunt every few weeks during the season.

It seems that the brother who is a good man, and very zealous, but somewhat indiscreet—once took occasion to say that if the money spent in feeding worthless hound dogs in the neighborhood was contributed to the church, that both the pastor and the building would be kept in better trim. Now as the gentlemen who owned hounds were the very ones who had contributed all, or nearly so, of the funds which had actually been paid in, they felt it. Of course, they said nothing; but the church came to some kind of a resolution to build their worship elsewhere. The thing finally became rather a jest, and one of the parties proposed that they should hereafter be known as the Hound Dog Club, and it has been so ever since. Every sporting visitor becomes a member, by courtesy. There are no fees, no officers; only members, and they will all welcome any gentleman who goes there to hunt.

I welcome to Butler was not so pleasant as I have depicted above. One chilly night in September last, at the head of a cavalcade of some forty soldiers and half a dozen teams, I arrived in Butler about eleven o'clock P. M. We had had a very hard march, for the roads were bad and the men had to push every wagon up each hill, and by the time we had made thirty miles all hands were pretty well used up, and my men were so tired out that they would not even build a fire to make themselves some coffee.

Just as I arrived, I saw some dozen or more nicely dressed ladies, each one daintily escorted by a cavalier, wending their way homeward from a dance "at the academy," and the clear, sweet laughter of the ladies, and an occasional note of the violin, were quite a change from the gloominess and loneliness of the forest, through which we had for some hours been making our toilsome way by the aid of pitch pine ("light-up") torches. Knowing that Butler was a place where we could have found of any kind, and in the south which did not possess some kind of a hotel, the undersigned had made no arrangements for the cuisine, though he fortunately had brought his blanket. After awhile, having escorted the ladies home, the revellers returned to see what was up, and I made inquiries as to a place to sleep and a chance to get a mouthful to eat, for we had fasted since eight o'clock A. M. A rather chilling negative was all the information we could obtain—evidently the ladies were out of the way. We were out of bread. We had our blankets on the ground, and slept "the sleep of the just."

With the first beams of the morning sun, the reveille was sounded, and the rat-tat-tat of the drum awaked the stillness of the crisp, chilly air. We soon had breakfast cooked and eaten; it was simple, but good, and relished. We then went into camp. I soon got things in order, and did nicely, and was independent. After awhile, the people that we were soldiers, for we were out of bread. We then had our blankets on the ground, and slept "the sleep of the just."

As I have spoken of food, perhaps some of your city readers would like to know the price of provisions in Butler, so I will give a short schedule. Elegant beef, five to six cents per pound; Spring chickens, ten cents, and full grown ones fifteen cents apiece; eggs, ten to fifteen cents per dozen; fresh butter, twenty-five cents per pound; wild cooked, and sardines, for we were out of bread. We then had our blankets on the ground, and slept "the sleep of the just."

What do you think of that? There is not much likelihood of starvation in that country, is there? And yet it is very much the same as was the case when the American asked the Englishman, who grumbled at the prices in this country, "Why he came over here if replies only cost six-pence in England," and received the reply, "Because the Englishman was a soldier, and he was out of bread. We then had our blankets on the ground, and slept "the sleep of the just."

As I have spoken of food, perhaps some of your city readers would like to know the price of provisions in Butler, so I will give a short schedule. Elegant beef, five to six cents per pound; Spring chickens, ten cents, and full grown ones fifteen cents apiece; eggs, ten to fifteen cents per dozen; fresh butter, twenty-five cents per pound; wild cooked, and sardines, for we were out of bread. We then had our blankets on the ground, and slept "the sleep of the just."

greens, corn bread and spare ribs, and usually the stranger is made very welcome.

The country is very uneven. We found it literally up one hill and down the other. The teamsters used to say if you wished to stop on the top of a hill the hind wheels must be on one side and the forewheels on the other, else the wagon would not keep its place. The soil is a sticky red clay, very muddy in wet weather, and very dusty in dry. About one sixth of the country is under cultivation; perhaps hardly so much. The rest is covered with a heavy growth of oak, hickory, gum, holly, and pine.

The game to be found consists of deer, bear, an occasional "cat"—i. e., wild cat, or catamount—raccoon, opossums, wild turkeys, ducks, quail (partridge), geese, snipe, and woodcock in their season, and many others. Deer and turkeys are particularly abundant, and very but little trouble one can have rare sport. Squirrels are as thick as hops.

There are a considerable number of small lakes throughout the country, and these are full of fish. The river also contains many varieties in abundance, including the white, or channel cat, and the "buffalo."

One more subject of interest, and I will close. Many of us will remember that along the rivers and streams, swamps, fevers, and agues were very deadly, and victims of swamp fever, congestive chills, and fever and ague will rise before their eyes, and they will hesitate and fear, lest the seeds of immediate attack or future illness be implanted in their systems. In the Summer and Autumn, on the river banks and in the swamps, the miasma is powerful, a single night's exposure often entailing a troublesome attack of typho-malarial fever, the fever of the country. But in the Spring and during these seasons, and anywhere in the Winter, there is no danger whatever, and the visitor from the North need have no fears. A prophylactic, in the shape of a wine glass of good spirits, with two or three grains of quinine dissolved therein, and taken before one leaves the house in the morning, will render the sportsman fever-proof during his sojourn; or a two grain quinine pill, and a cup of hot coffee afterwards, will answer the same purpose, perhaps in a much better way.

In speaking of the various places in Chocoma county, I mentioned Mount Sterling and Tompkinsville, as well as Bladen and Butler. I ought not to close this article without letting the reader know that he will probably find Mount Sterling the most agreeable place of residence in the county. It is the one place in the whole South where ardent spirits are not sold as a beverage. The wealth, the refinement, and the aristocratic air of the country seem to have centered there. In saying this I do not reflect upon other parts of the country. I only mention what is universally conceded to be the case. A stranger going there and calling on Mr. Prince, or Mr. Taylor, or Mr. Glover, or any of half a dozen others, will not be disappointed.

At Tompkinsville, or at its landing on the river, "Marshall," I am sure a gentlemanly stranger will find an agreeable companion in Capt. James Bryant of that ilk. Chocoma county and its vicinities, like all other places, has its good and its bad sides. It is a perfect wilderness outside of the little villages (the county town contains less than fifty buildings, counting stores, dwellings, barns, and all), and one is as much out of the world as in the heart of the Adirondacks. The mails are carried on horseback, and vary from once to twice per week, according to which town you are in. In very wet weather there is no mail at all. So if one wishes to correspond with a fair prospect of finding plenty of game; if he wants a pleasant place of sojourn, pleasant friends, and good comrades, he cannot do better than spend the Winter in Chocoma. If he be a true sportsman, he will not expect the luxuries of the large cities; but he can always get plenty of pure, fresh air, and good hearty food. He will meet a warm welcome, and if he be a good fellow, will not leave the country without having made a number of friends. I went to Chocoma with regret; and I left it with regret; and I shall not soon forget the pleasant friends I met and left there.

MOSSMOUTH.

ACROSS NEWFOUNDLAND.

INTERIOR EXPLORATIONS—FLORA, FAUNA, AND GEOLOGICAL FORMATION.

[Continued from January 14th.]

CHAPTER IV.

OCTOBER 7th.—The nights and mornings were now frosty, and the vegetable kingdom had put on its Autumnal coloring of various tints. The waters as well as the air were becoming more chilly every day. A favorable change of wind did not now bring the accustomed mildness of temperature.

We had been occupied since the 11th of September in traveling the whole country. The little ridge in the westward, lying northerly and southerly, had been in view several days, and about the centre of the island. On arriving on it, this ridge proved to be a serpentine deposit, including a variety of rocks, all lying in nearly vertical strata alternating. The conspicuous points were the large angular blocks of quartz rock, lying on outcroppings of the same, ranged along the summit. This rock was very porous, owing to the action of the water, and was in view. The highest parts of the ridge were formed of this metallic rock, and were extremely sterile. The other rocks were noble serpentine—varying in color from black green to a yellow, and from translucent to semi-transparent, in strata nearly a yard wide—steatite, or soap stone, *serpentine antique*, *diallage*, and various other magnesian rocks. Sterile red earthy patches, entirely destitute of vegetation, were here and there, and the rocks were very hard, and on these large heaps of loose fragments of asbestos, rock wood, horn, cork, rock leather, rock horn, rock bone, and stones light in the hand, resembling burnt clay, *conglomerata*, the whole having the appearance of heaps of rubbish from a pottery, but evidently detached from adjoining strata and veins. I could not divest myself from the feeling that we were in the vicinity of a quiescent volcano.

The beaches of many of the lakes of the neighborhood, as already noticed, are formed of disintegrated fragments of those rocks. At one lake in particular, which I consequently denominated Serpentine Lake, the beauty and interesting appearance of some of the beaches, composed entirely of rolled fragments of those rocks of every kind and color, the red, yellow, and green prevailing, may be fancied better than described. A part of the eastern

shore is formed of a hard, greenish, gray rock, in large, loose flings, indented straight grooves, which, when struck as we tread upon them, emitted a sound like pieces of metal. Serpentine Lake is comparatively small, being about two miles and a half in length and one in breadth. It is known as the Mickmack, but the Indian name for it, or Stone Pipe Lake, from their procuring here *terre antique* and other magnesian rocks, out of which they carve or chisel tobacco pipes, much prized by them.

In the woods on the margin of Serpentine Lake we found an old birch bark canoe of the Mickmack Indians, the same as those used by these people at the sea coast. It had been brought up from the Bay of Despair at the south coast of the island, by the Indians of the Bay River, who pass through this and intervening lakes. From the circumstance of finding this canoe here, we inferred that the portages between Serpentine Lake and the sea coast were not very extensive or difficult. Here, then, is a route of the Indians by which the centre of the island may be approached with the same canoe, and close by are the sources of rivers that flow to the north coast. There was an inhabited beaver's house at the south end of Serpentine Lake, and we shot three of the family that occupied it for food. There were several herds of deer around, the white headed eagle was also an inhabitant of this part.

This interesting ridge and district, which forms the centre nearly of Newfoundland, I designated Jameson's Mountains. Judging from the rise in the land for about thirty miles to the eastward, they are about 1,200 feet above the level of the sea. Future travelers may easily reach Jameson's by the route mentioned.

October 10th.—Being now upwards of 110 miles from the most inland part of Trinity Bay, about ninety miles of the distance being across the savannas, we had not yet seen a trace of the Red Indians. It had been supposed that all the central parts of the island were occupied by these people, and I had been daily looking out for them. They were, however, more likely to be fallen in with farther to the westward. It was not until nearly five miles since with my Indian I left the sea coast, and was just half way to George's Bay. We had for some time past felt severely the effects of continued excessive exertion, of wet, and of irregular supplies of food. My Indian, and only companion, complained much of the never ending toil, and would willingly have gone out to the sea if I had yielded to his wish. But with me it was now or never, and I had apprehensions of being overtaken by the natives, and they would reach St. George's Bay. To keep my Indian at the tollsome I had sometimes to encourage him by promises of future reward, sometimes to excite his emulation by allusions to the fame of the Indian hunters for enduring fatigue and hardships beyond what the white man could bear, and again to picture the shame consequent on his leaving me in the country to perform alone what we had set out to do together.

In the west mountain succeeds mountain in irregular succession, rugged and bleak. Encumbered with many additional mineralogical specimens, we took our departure from the interesting central mountains. Immediately on the west they are succeeded by *gneiss*, and next to that comes the hungry granitic territory, still almost as barren to imagination as at the creation. There are occasional marshes, and some of the less exposed granite ground berries in great plenty. The species of *Linum*, or Indian sea, is met with here, different from that commonly found at the sea coast. It is a more perfectly formed shrub, with smaller, rounder, and more numerous leaves; lichens grow everywhere, from the edge of the lake to the mountain top; and deer now begin to appear in small herds in every direction.

October 11th.—While surveying a large lake in the south-west, we described a faint column of smoke issuing from amongst islands near the south shore, about five miles distant. The time we hoped had at last come to meet the Red Indians. Rivers rise here, as they had throughout our journey, owing to our track being central, that run to both sides of the island; but it could not be seen to which side this lake contributed its waters. The Red Indians had been reported not to frequent the south side of the island. It was too late in the day to reconnoitre, and my Indian went in pursuit of a herd of deer in another direction, we having no provisions for supper. At sunset he did not meet me at the appointed wood in a valley hard by, nor did he return by midnight, or at all. I dared not exhibit a fire on the hill as a beacon to him, in sight of the strange encampment. His gun might have burst and injured him; he might have fled, or been surprised by the party on the lake.

October 12th.—At daybreak the atmosphere was frosty, and the slender white column of smoke still more distinctly seen. There were human beings there, and, deserted, I felt an irresistible desire to approach my fellow creatures, whether they should prove friendly or hostile. Having put my gun and pistols in the best order, and no appearance of my Indian at noon, I left my knapsack and all incumbrances, and, by the aid of my Indian, and my Indian, went in the nearest path of the lake, about two miles distant. The white sandy shore, formed of disintegrated granite, was much trodden over by deer and other animals, but there were no marks of men discernable. The extent of the lake was uncertain; but it was apparent that it would require two days at least to walk round either end to the nearest point of the opposite shore to the occupied island. I therefore kept on, by the lake, and proceeded with the purpose. By firing off my gun, if the party were Red Indians, they would in all probability move off quickly on hearing the report, and they having no firearms my fire would not be answered. If they were other Indians, my fire would be returned. I fired. By and by the report of a strange gun traveled among the islands from the direction of the smoke, and thus all my doubts and apprehensions were dispelled. It was my own shot, and the first shot I had ever caused by man, except by my Indian and myself, for more than half a century, and it excited very peculiar feelings.

In about an hour my lost Indian unexpectedly made his appearance from the direction where we had parted on the preceding evening, brought to the spot by the report of my gun. He accounted for himself, that after having shot a stag about two miles from the spot, and having no game in the neighborhood, he attempted to get around the west end of the lake to reconnoitre the party on the island, but found the distance too great, and, getting benighted, had slept in the woods.

Soon afterwards, to my great delight, there appeared among some woody islets in front, which precluded the view of the other side of the lake, a small canoe with a

man seated in the stern, paddling softly towards us with an air of serenity and independence possessed only by the Indian. After a brotherly salutation with me, and the two Indians kissing each other, the hunter proved unable to speak English or French. They, however, soon understood one another; for the stranger, although a Mountaineer from Labrador, could speak a little of the Mickmack language, his wife being a Mickmack. The Mountaineer tribe belongs to Labrador, and he told us that he had come to Newfoundland, hearing that it was a better country than his own, and that he was now on his way hunting from St. George's Bay to the Bay of Despair to spend the Winter with the Indians there. He had left St. George's Bay two months before, and expected to be at the Bay of Despair in two weeks hence. This was his second year in Newfoundland; he was accompanied by his wife only. My Indian told him that I had come to see the rocks, the deer, the beavers, and the Red Indians, and to tell King George what was going on in the middle of that country. He said St. George's Bay was about two weeks' walk from us if we knew the best way, and invited us over with him to his canoe to rest a day at his camp, where he said he had plenty of venison, which was readily agreed to on my part.

The island on which the Mountaineer's camp was lay about three miles distant. The varying scenery as we paddled towards it, amongst innumerable islands and islets, all of granite, and mostly covered with spruce and birch trees, was beautiful. His canoe was similar to those described to have been used by the ancient Britons on the invasion by the Romans. It was made of wicker work, covered over outside with deer skins sewed together stretched on it, nearly of the usual form of canoes, with a bar or beam across the middle, and one on each end to strengthen it. The skin covering, fells side out, was fastened or laced to the gunwales with thongs of the same material. Owing to decay and wear it requires to be renewed once in from six to twelve weeks. It is in these temporary barks that the Indians of Newfoundland at the present day navigate the lakes and rivers of the interior. They are easily carried, owing to their lightness, across the portages from one water to another, and when damaged easily repaired. There were innumerable granite rocks in the lake a little below and above the surface; on one of these our canoe struck and rubbed a hole through the half decayed skin, and the water began to rise to our persons and guns. His wigwam was situated in the heart of a wooded islet, at which we arrived before sunset. The approach from the landing place was by a mossy carpeted avenue, formed by the trees having been cut down in that direction for firewood. The sight of a fire, not of our own kindling, of which we were to partake, seemed hospitality. It was occupied by his wife above, seated on a deer skin, busy sewing together skins of the same kind to renew the outside of the canoe we had just found, which required it. A large Newfoundland dog, her only companion in her husband's absence, had welcomed us at the landing place with signs of the greatest joy. Sylvan happiness reigned here. His wigwam was of a semi-circular form, covered with birch rind and dried deer skins, the fire on the fore ground outside. Abundance and neatness pervaded the encampment. On horizontal poles over the fire hung quantities of venison steaks, being smoked dry. The house was cheerful, and a supper, the best the chase could furnish, was soon set before us on sheets of birch rind. They told me to make their camp my own, and use everything in it as such. Kindness so elegantly tendered by these people of Nature in their solitude commenced to soften those feelings which had been fortified against receiving any comfort except that of my own administering. The excellence of the venison was such that the strongest beef eaters could not be surprised. A cake of hard deer's fat, with scraps of suet, toasted brown, intermixed, was eaten with the meat; soup was the drink. Our hostess, after supper, sang several Indian songs at my request.

(To be continued.)

NOVEL DEER CHASE.—A valued contributor, who is a keen sportsman, sends the following item clipped from the *Strathroy (Canada) Dispatch*:

As Dr. Billings, of this town, was riding along near Mount Carmel, he descried a deer on the road, and shouted at it, expecting to see a fine run across the fields. The deer was so frightened by the shout, that he jumped the fence, it struck the fence-rider and fell back. The Doctor kept on shouting all the while, and the confusion of the animal became so great that each succeeding attempt was no more successful than the first. Seeing this, the Doctor reined his horses in a corner of the fence, jumped out of his buggy, made for the deer, and actually caught it, but had no sooner touched it than he found himself in the ditch. After two or three ups and downs it got away from him; but, being a doctor, he fought on scientific principles, and in his endeavors to cut the carotid artery inflicted a wound on its neck. The confused and now wounded animal ran off ten or twelve rods and actually came back to the very same spot to jump the fence, and with the same ill-success as before. The Doctor closed in and caught it a second time, and then another set of ups and downs, succeeded in severing the carotid artery with his knife. The deer's life-blood soon effused, and it sunk a victim to its captor's pluck. After the excitement was over the Doctor found himself too much exhausted to lift his prize into the carriage. By resting some time, however, he was able to do so; and that being done, he drove home, we will not say a bigger, but certainly a pleased, muddy, and bloody man.

—The following clipping, from the *St. Louis Republican*, contains some hints that may be of service to some of our New Jersey fox hunters:—

Mr. R. S. MacDonald, a modern Nimrod, is in the habit of receiving letters, instructing him on sporting affairs, in the following style:—

"I have a fox that will chase your pack of hounds and run a coon up a tree. I offer you and your chasers my fox for \$6. I will guarantee that he will not lose his brist. Come and see my fox, at the southeast corner of Eleventh and Washington avenues."

Following is another specimen:—"I see in the paper that you brought five foxes from Europe, and that you and your friends will soon go on the hunt. I have a fox that is young and wild, which I will sell to you for \$6. It was born in this country, and knows every hole and cavern around Creve Coeur Lake; consequently you will have a high old time."

Fish Culture.

This Journal is the Official Organ of the Fish Culturists' Association.

THE FISHERIES OF MICHIGAN.

WE have received from Geo. H. Jerome, Esq., the able Superintendent of the State Fisheries, the first annual report of the Fish Commissioners of Michigan, which, covering entirely new ground, as it does, is exceedingly interesting. This opens with a review of fish culture, its progress, development, and its economical and commercial value. The action of fishermen who wantonly destroy the denizens of our waters is criticised in proper terms, and the best means of checking their depredations and preserving an important article of food are duly explained.

In reviewing the indigenous fishes of the streams and lakes of Michigan, they place the white fish (*Coregonus albus*) at the head of the fresh water species. While this is found in several interior basins, yet the Great Lakes afford the only supply extensive enough to meet the wants of commerce; but owing to the rapacity of some men, even this fish is now diminishing in these great depots. A strong effort has been made to propagate this species, and with fair results so far.

The next in importance to the preceding are the lake trout, including what is known as the Mackinac trout, salmon trout, *Namaygush*, and *Salmo siskiwitae*. These several varieties, differing in size, color, and general appearance, are undoubtedly congeneric, all being of lacustrine habits and non-migratory.

The black bass (*Oryzias nigricans*) is found in almost every part of the State—in the lakes and rivers, and in waters varying greatly in depth, size, and temperature. It does not seem to be as highly appreciated as other species of fish, although it is of good flavor, and a favorite with many anglers owing to its pluck, endurance, and resolution. It is hardly capable of standing much variety of water and temperature; an abundant propagator, and a careful protector of its young, and it is, besides, less trouble than most fishes to prepare its ova for the stocking ponds.

Of the grayling (*Thymallus tricolor*), it is said that it is extremely gamey, beautiful, and in grace of motion equal to any of its tribe. Its true value is not yet fully decided, as its qualities as an article of food have been criticised. Its habitat is the Au Sable, the Muskegon, Hersey, Pine, and Boardman—indeed, very many of the streams and rivers of Central and Northern Michigan, possibly a majority of them, are believed to abound in the grayling. It is said that they have been caught weighing four and a half pounds. Their average catch, as reported, is from one half to two pounds. Sixteen grayling, from nine to fourteen inches long, have been at the State Fishery for the last nine months. They have occupied one of the small spring ponds in company with several hundred speckled trout of about the same age and size, where at all times there have existed, as far as observation and appearance can decide, the greatest friendship and concord. They rise to the surface to take their food a trifle less sharply than the trout, and show about an equal percentage of growth. They eat all kinds of food that are prepared for the trout—liver, lights, heart, kidney, etc.

Of the brook trout (*Salmo fontinalis*), the report says:—“Until attention was called to the general subject of fish propagation, it was currently reported that the genuine *Salmo fontinalis* had no domicilium in the State. But later investigations verify the fact that he not only exists here, and that, too, in many portions of the State, but that he is here in all the initial stages of his prime and glory. Specimens have been shown the commission, obtained from the streams of Northern Central and Northern Michigan, equalling in every respect their New England, New York, Pennsylvania, and Rocky Mountain congeners. *Salmo fontinalis*, as its name implies, is a fish of the streams, the *fontaines*. Mountainous and hill-side springs, and ‘bubbling brooks’—pure and swift rivulets, having gravelly and rocky beds, where the water, in its dashing, splashing flow, of very necessity becomes in large measure oxygenized, for probably no species is a larger consumer of oxygen; these are the natural haunts of the ‘speckled beauties.’ And their culture in any other class of waters will ever most likely be attended with but indifferent success. The brook trout being thus particular, always preferring to ‘take his clear and cold’—a slow-grower, an unpropitious breeder, and little regarding the convenience of fish culture, rises as to the spawning periods (the late Fall and Winter months), and will, being in a pre-eminent sense an autumn fish, none of the commissions of the several States, Michigan included, have deemed it advisable to enter this species in their vocabulary of food producing fishes. And though left thus to private or individually associated enterprise, no apprehension whatever is felt but that his great beauty, rarity, gamyness, and par excellence platter quality, will long keep him from being numbered with the extinct fauna.”

Other species of fish, such as the pike and pickerel, the white rock, green bass, perch, sun fish, catfish, bull head, sturgeon, suckers, and several more varieties, are also found in the waters of the State; but as they are not deemed valuable for the table, the commissioners hope to replace them by food fishes.

The work of transplanting edible fishes to the waters of Michigan has been prosecuted assiduously. The first species to receive attention was the *Salmo salar*, 40,000 ova of this fish being hatched out in 1873 near Clarksville, and placed in several streams and lakes. The next lot was 180,000 eggs, received from Bucksport, Maine, and these were also distributed in the best manner. About 15,000

young fry of this number were lost during their transportation to Lake Superior.

A small beginning has been made in introducing the land locked salmon (*Salmo sebago*). About 3,000 ova were received from Prof. Baird, and of that number the greater portion were hatched and are now in the streams.

In 1873 the State received 80,000 eggs of the California salmon (*S. quinnat*), and a large percentage of these were hatched. The greatest loss was from the malformation of the alevins. The young fry grew rapidly, and after absorbing the sac were placed in convenient streams and ponds. Those at the State hatching house are quite domesticated, and feed from the hand. They are fed principally on the kidneys, livers, and lights of beavers. Some 750,000 more eggs were received in 1874, and only a few of these, comparatively speaking, proved unproductive.

The shad (*Alosa praeestabilis*) has been largely experimented with; but the time is yet too early to note the results. Of this fish, the commissioners say:—

“It spends more time in salt water than salmon; it does not go so high up to the sources of streams and rivers for spawning, very frequently spawning in estuary or brackish tidal water; the fry are not injured by salt water; indeed, their early life efforts are seaward. None are found, as is the case with the salmon, in the inland lakes. Besides, admitting the possibility of successful colonization for States already supplied with whitefish, salmon, trout, black bass, and other choice varieties, the need of such importation is not very manifest.”

Those enumerated are all the foreign species that have been introduced. It is suggested that eels be experimented with, as the probability is that they would thrive well.

Of the indigenous varieties, the whitefish has received the most attention, over a million and a half of eggs having been hatched in the Winter of 1873-4, and deposited in over two hundred lakes. Arrangements have been made to distribute between two and three million eggs the current year.

The total expenditures, from May 12th, 1873, to December 1st, 1874, have been only \$9,313, including hatching house, overseer's house, ova, and salaries.

The report closes with suggestions as to the preservation of fish, and these are so practicable that the Legislature will no doubt act upon them. We must congratulate the people of Michigan upon having commissioners who are so attentive to the public welfare, and so zealous in the prosecution of their duties.

The report very properly includes an appendix, with the game and fish laws of the State, which feature we urge the commissioners of other States to adopt in their reports.

FISH CULTURE IN MASSACHUSETTS.—The annual report of the commissioners on inland fisheries has been submitted. We give a brief abstract:—

“The commissioners say that the law in regard to smelts, passed last Spring, has proved very beneficial; that a fishway to permit the easy passage of salmon is building at Turner's Falls. They also say that they never expected any fish to go over any fishway if bred below and not above it, as migratory fish always return to the place where they are hatched. Fishways are to be built in Carver and on the Westfield and Agawam rivers, and on the Shaw-shine in the towns of Bedford and Billerica. A fishway is also proposed upon the Nashua River. The number of shad spawn taken at North Andover last year was 2,249,000; hatched and turned in above Lowell, 1,950,000; above Lawrence dam, 800,000; sent to Neponset, R. I., 550,000. At South Hadley, 3,016 shad were taken, and 44,566,000 spawn. The average from each shad taken at South Hadley was 22,691 spawn. Of those taken at South Hadley, 2,300,000 were put in the Connecticut at Bellow's Falls and Smith's Ferry, and places between. The artificial hatching of trout has been very successfully carried out. Last year 280,000 have been received, and hatched with a loss of four per cent. Of land locked salmon, 5,500 spawn were hatched and distributed; and of 200,000 Sacramento salmon spawn, presented to the State by Prof. Baird, only 7,000 were hatched. Reports were received from the various parties to whom spawn were sent, reporting their successful hatching and rearing.”

FISH CULTURE IN PENNSYLVANIA.—Gov. Hartraft, of Pennsylvania, is a reader of FOREST AND STREAM, and hence this passage in his recent message to the Legislature.

“A growing interest in the cultivation of fish by artificial means is manifested throughout the country, and it is a pleasure to note that our people are devoting themselves to the investigation of this novel and important subject in a manner that will establish the success or failure of the experiment in the various waters of the State. The labors of the Commissioners of Fisheries continue to afford substantial reasons for encouragement. During the past year we have been planning for securing food and the indulgence for their peculiar habits were most promising. These fish are rapid in their growth, increase very fast, attain a large size, and are a delicate article of food. A general distribution was also made of a large number of black bass, a very prolific, choice, and beautiful fish, that grows and multiplies with marvelous rapidity in our streams. The hatching of shad was resumed last Spring, and 3,000,000 of young fish were turned into the Susquehanna. This Commonwealth appropriated a fund to be expended jointly with the fish commissioners of New Jersey in hatching shad to be placed in the Delaware. The Legislature of New Jersey, I regret to say, failed to make a similar appropriation, and in consequence no shad were hatched for that river. There were no obstacles whatever to the ascent

of shad in the Delaware as they come in from the sea, the river is said to be particularly adapted to their wants, and with proper co-operation the supply of shad may be immeasurably increased; and I trust, therefore, that our sister State will combine with our commissioners in replenishing the river.

“The success of the fish way at the Columbia dam does not correspond with the public expectation, and some fears are entertained that the dam may prove an insuperable barrier to the ascent of the shad. Alterations in the fish way have been made with very little additional cost, that will prove an effectual test of the process now on trial, and if it is discovered that the shad will not or cannot make the transit some other channel will have to be opened to enable the fish to ascend, for now that it is demonstrated that these fish can be propagated artificially to an extent that will make them a constant and unfailing source of cheap and excellent food, every form of experiment should be exhausted before the enterprise is abandoned.”

MASSACHUSETTS ANGLER'S ASSOCIATION.—The most interesting and instructive meeting ever held by this association, was that of Wednesday evening, 13th inst., in their rooms, corner of Washington and Essex streets, Boston. After the regular routine business and election of 20 new members, the members present, of which there was a goodly number, were addressed by Hon. E. A. Brackett, one of the Massachusetts Fish Commissioners, who was followed by Benj. P. Ware, Esq., of Marblehead, in one of the most forcible and lucid addresses ever delivered before the association, on the preservation of the deep sea fisheries, a subject vital to the interests of Massachusetts. Mr. Ware took decided stand against trawling, as simply tending to the ultimate extermination of the cod, haddock and pollock fisheries on our coasts, and as being destructive to their habits. He also pointed out some of the evils of markeel sealing, supporting his arguments by undeniable facts and figures.

LARGER APPROPRIATIONS.—The House of Representatives shows its interest in the culture of fishes by appropriating \$67,500 for the propagation of food fishes. This sum is larger by \$60,000 than the one given last year, and proves that our legislators have some idea of advancing the prosperity of the nation. They also allow a Government vessel to be used in the Summer for investigating the marine inhabitants of our coast, and they second the able efforts of Prof. Baird in bringing to light the economic and commercial resources of our waters. They could not expend money for any more practical purpose, for the development of our food fishes is one of the most important public enterprises inaugurated in a long time.

TRANSPORTING AND HATCHING.

ROCHESTER, JANUARY 12, 1875.

EDITOR FOREST AND STREAM.—Mr. M. A. Green, assisted by myself, has succeeded in inventing a new method for transporting and hatching nearly all kinds of fish eggs. We have been experimenting for the last three years, and find that we can hatch nearly all fish eggs in the same way. We have also experimented on the following four kinds of fish spawn, namely: brook trout, salmon trout, white fish and salmon, and find it a perfect success. The temperature of your room can be so regulated that you can hatch them in from fifty to one hundred and fifty days. We have carried 100,000 salmon trout spawn from the New York State Hatching house to the Pennsylvania State Hatching House at two different times. On one trip we had seventeen die and on the other only two. By using this invention with the proper management, spawn can be carried a 130 days' journey without any more loss than if they remained in the hatching house, and by this same invention they can be hatched in any spare room of your house from the cellar to the garret. Yours,

SETH GREEN.

Fish Commissioners of States will oblige us by sending in their Annual Reports as soon as published.

Natural History.

THE PERIDICIDÆ.

BY J. B. BARNES.

OF the *Peridicidæ*, or Partridge family, there are seven genera, two of which are European, viz: the *Perdix* and *Coturnix*. Of the other five genera, the *Oreortyx*, (*Bon.*) *Oreortyx*, (*Baird*), *Lophortyx*, (*Bon.*) *Callipepla* (*Wagler*) and *Cathartes*, there are upwards of forty varieties distributed throughout the entire United States and portions of South America.

The *Ortyx Virginianus*, (*Will.*), has probably been the cause of more controversy by various writers as to what name it should bear than any other game bird of the entire United States. The cause for such wide and various differences of opinions is sufficiently evident in the fact that this species is subject to numerous changes in size and color in the localities where it exists. Yet when one takes into consideration over what a vast expanse of territory this species is distributed, a majority of these opinions might be overlooked. Extending as it does from the Eastern United States to the Western plains and Texas, it has not only perplexed early writers, but judging from the numerous books on game which have been recently published, those of a later date are equally bewildered. In portions of New York, and in nearly all of New England, as well as in many of the Western States, it is called *quail*, while in Pennsylvania and in the South it is called a partridge. Where the ruffed grouse is called partridge this bird is called quail, and where the quail is called a partridge the ruffed grouse is invariably termed pheasant. Neither of these names can be correctly applied to any of our American species. The name quail was undoubtedly given to this species by early writers, on account of its close resemblance to the *Tetrax colczensis* (*Linn.*) of Africa, of which there are several species, only one of which, however, is found in Europe. Foreign writers tell us that at certain seasons of the year these birds are so numerous along the shores of the Bosphorus and in some of the islands of the Grecian Archipelago, during the migrating seasons, the sky may be said to be raining quails. They commence

I promised some time since, Mr. Adams consenting, to send you the pedigrees and some account of the splendid brace of setters imported by him Mr. Llewellyn. I have not yet arrived, and it will be advisable to delay giving a description of him at present. His breeding and performance are of an extraordinary kind, and he has been the cause of much talk. It happened to this splendid dog, destined to be, in my opinion, the best acquisition to our means of improving our breed of setters. It may not be out of place to say here that whatever may be the opinions of our sportsmen as to the merits of the late dog controversy, the propriety of bringing it before the public, and the courtesy, or want of it, with which it was conducted, that it is generally admitted by gentlemen who have any knowledge of the subject, that the late Duke of Devonshire's dog is infinitely more valuable than any other that has been bred. It is difficult to be too impossible, to find in England another that can turn out so many to one hundred as he does as this. It is not to be supposed that his are the only good dogs in the kingdom; but it is sufficient for our purpose that they are first class of their kind, and bred with great care and without regard to expense. Dora, whose pedigree I now inclose, was imported from Mr. Llewellyn by Mr. Adams in May, 1874, in which month she was mated with the Duke's dog. It is not necessary for me to state that unless some recent change has occurred he is not to be purchased from Mr. Llewellyn except at a price that would appear fabulous. On the 22d of May Dora had nine pups. These are now scattered, some having gone as far West as Missouri and Iowa, where we hope to hear of their stock in due time. Mr. Adams has reserved two—Duke and Donny—both of which are now in the hands of Mr. Llewellyn. I have been so busy though for several years past withdrawn from the field for breeding, still I cannot but point beautifully, and has a peculiar, light, and graceful gallop, and must be seen to be appreciated. She is remarkably fine and handsome, has a soft and full eye, and is considered by our sportsmen none altogether the best bitch in these parts. Your readers will notice that Mr. Smith's Dart, whose pedigree I now gave some weeks since, is out of the same dam as the Duke's dog, and one of her litters, which I have printed, I will send at some future time. I am, Sir, Dear Sir,

CROSS-BREDS, OR DROPPERS.

PHILADELPHIA, January 9, 1875.

EDITOR FOREST AND STREAM:

Notwithstanding the rumor with which the cross bred dog, or dropper, is looked upon by the true breeder of pure pointers or setters, it still has many advocates and admirers in the sportsmen of this country, who claim for it superior qualities in many respects to either pointer or setter. Especially is this the case in some of our Western States, which indeed appears to be the stronghold for this class of dogs. The objections to the pointer and setter in the western country, more especially in grouse shooting in August, are, I believe, the pointer's inability to stand long and continued hard work in the rough grass of the prairie, and the disadvantage of having to furnish setters with water at short intervals, when this cannot naturally be obtained, besides which the long hair of the latter dog is said to catch and hold birds, which causes the animal much annoyance. I shot for some weeks during the past fall, over a dropper owned by me. He was a large dog of a dark liver color, with no markings whatever. He was one of a litter of five or six whelps, part of which I was told resembled the dam, which was a pointer bitch, and the remainder the sire, which was a full blooded setter. Two of the litter were owned at the village at which I was stopping. The first mentioned dog resembled his sire, the latter his dam, although both suffered on his head. The latter was a dark liver color, and coarser in his hair and had not much of the long silk feather, which is the setter's chief ornament. He was also rather low in his hindquarters, and his hips were small, which consequently weakened his propelling powers. The pointer's beauty was also marred by his coat of hair being longer and coarser than in the full blooded animal. Of these dogs, that which resembled the setter was decidedly the best. I met him at the time a pure setter bitch but a few months over one year old, which I afterwards gave to the party with whom I was shooting, and about whom she was in the country for the first time, she never appeared so worn out at the end of the day's shooting as did the dropper. Besides these dogs I have seen numbers of others of the same breed, and taking them all together, I have come to the conclusion that the gentleman sportsman does not want a cross-bred dog to shoot over.

Most sportsmen who go to any expense to procure good dogs like to perpetuate their stock, so that in after years they can have dogs upon which they can rely, and this, with care manifested in their breeding, can be readily accomplished; but such an extent even may be carried that in some of time they may be so bred that they will be the direct descendants of which fact there are many instances now in this country. Every whelp of certain breeds is eagerly taken at a high figure, because they are known to almost invariably turn out well. But with the dropper this is quite different, as their direct progeny is said to be next to worthless, a fact which I have seldom heard denied; even Bozardus, who exerts a powerful influence by recommending this dog in his book, says the same. Why, then, should a sportsman so ruin himself with the possession of an animal whose good qualities, if it really possesses such, rest solely in itself, and which has not the power of transmitting the same to its descendants? A sort of mule dog, for the mule without doubt has many qualities which recommend it in its certain sphere; but would a gentleman think of keeping such an animal in his racing stables, or even for driving purposes? The friend of the dropper does not claim that his dog is the best and want of water much better than the setter, but Bozardus again states that he can see but little difference in this respect, both requiring it in about the same degree. As to the burs becoming entangled in the setter's long hair, why not clip him of his feather for the time and in the end he will present a much handsomer appearance than the dropper. America needs what her England has, and what she does not now have, a whipping-up and keeping intact her splendid breeds of dogs than any other circumstance. I mean her dog shows and field trials. Where large numbers of dogs of various breeds are brought together, all to compete for the highest prizes, in their various demands, sportsmen and breeders will be made familiar with the best, and be enabled to select for breeding purposes better than they could select from their own kennels, and thus, circle of sporting acquaintance. In this country it is too often the rule, for the ownership of a dog to make him the best, and many are apt to be misled by this, and perhaps to this fact, more than any other cause, is due the many virtues ascribed to droppers. Respectfully,

J. H. W.

2031 EVERGREEN STREET,

PHILADELPHIA, January 7, 1875.

EDITOR FOREST AND STREAM:

In your issue of last week there appears in the Kennel column the pedigree of the Gilderleeve setters. There is also given the name of Benj. Wharton, among others, from whom this breed can be obtained. In the same paper Mr. Wharton publishes a challenge to Mr. Brooks to hunt his pup against any pup of "Bismarck," one year old or under for fifty dollars. As Mr. Brooks has never kept, or sold any of Bismarck's pups, and likely never will, he cannot accept of the challenge. The subscriber, however, happened to have a pup of Bismarck, one year old or under, at the date of Mr. Wharton's challenge, which I would be very willing to hunt in the proposed match. So I called at 1727 S. Fourth street, "where the dog and money are to be found." I was prepared to put up the money, and have done my best to get Mr. Wharton to do the same, but all in vain. As my pup is not for sale, I ask in justice to your readers that you publish this note.

Very respectfully,

GEORGE C. SETTLE.

The publication of the Gilderleeve pedigrees referred to in Mr. Settle's communication to us was in no wise in connection with the challenge of Wharton, as Mr. S. intimates. The matter came at different times and from different sources. We do not take sides in any trials of skill, as we have said before, and cheerfully publish Mr. Settle's letter. Hereafter we shall publish no challenges, unless we feel satisfied they are in earnest, as from late developments we are forced to believe Mr. W.'s was not.—Ed.]

PRESERVATION OF GAME.—A writer in the *Chicago Field* very appositely says:—

"Remarks are often made about 'unnecessary slaughter of game.' This can hardly be prevented during the season allowed by law; this same law being to blame for at least one-half of this unnecessary work, so to speak. I allude to the early season at which all game is allowed to be shot, &c., being at least one month before the game is supposed to be marked without fear of spoiling in transit on account of the usually hot weather. True, it can be iced, but the means are not always at hand. I venture to assert that two-thirds of the game shipped during the first month of the season is lost to the consumer, entailing a loss to the shipper, and also to the purchasers who retail, as they can, at that time seldom find a lot of birds they do not have to throw away some after having paid for them as sound birds."

The season, to my mind, opens one month too early on deer, wild turkey, grouse, partridge, geese, brandt and duck, and should be extended for killing one month later, say to the first of February on deer, turkey, grouse, partridge and quail; giving to the last of February to close out stock on hand. There would be probably no saving in the quantity killed, but it would all be utilized as food, instead of being condemned by the Board of Health, as a large quantity is during the first month of the season."

These suggestions are timely and well worthy of consideration.

Woodland, Lawn and Garden.

PLANT TREES IN CITIES.

AMONG numerous errors of omission and commission in relation to the sanitary condition of both country and city, we refer not alone to the neglect of tree planting in our broad avenues, wide streets, and pleasant spots, but to the ignorance of those who have the public weal of our cities in charge. You never knew a good healthy locality near the many sunken lots, pond holes, and uncovered receptacles of water in any one of our cities. My own observation alone has taught me the full value of shade trees and live air. Dwelling for a number of years in the immediate vicinity of very low lands, a large portion of which was a good pasture and numerous geese ponds, with the tumble down houses of squatters scattered around, on what was known in Brooklyn as the Old Dutchman's farm, I had a good opportunity to know the result of tree planting upon the health of the dwellers around those old low lands. Do you ask what the board of health were doing all this time? What they supposed to be their duty—filling up these flats, not with trees and soil and gravel alone, but with all kinds of garbage that is usually found in our large cities. This being wrong from the very first, proves that nothing but the most competent and well educated men should be placed on city sanitary committees. The manner of filling up these pond holes and flats with this debris of the streets gives only one result, viz., an unhealthy state of atmosphere, generated from this basis of impurity. Now there is quite a different result to the surrounding population, such a locality as this is just described and to one that is surrounded with only a moderate number of large shade trees, though not of a more elevated position. Do you wonder, then, that FOREST AND STREAM, the true embodiment of health and cheerfulness, should be used as far as possible as a sanitary aid to a better and higher state of health in our cities? Read, then, our plea for the true trees in our cities; and set down the beautiful tree that stands before your door for a mere whim or a mercenary consideration. What are dollars and cents to you when the grasp of the fell destroyer is laid upon your fairest and best loved? What are dollars in comparison to robust, life giving health?

The real value of life, the great and pressing necessity for the labor of the educated agriculturist, was never more fully impressed upon me than during a recent visit last Summer over the low lands of the Flatlands. A number of sunken lots extending from Third avenue to the East River, and from Ninety-second to One Hundred and Fifth street. An abomination seemed to be the best term that could be applied to this very wretched locality. It needed not the presence of poor, weak, puny, half clad children and diseased inhabitants to point to the real cause of this festering and sickening locality. There were no trees, with their deep, green cooling foliage, planted there, no sweet west wind dissipating the heated exhalation from this tomb of health. No; but a broiling sun poured its meridian rays upon a scene of wretchedness the like of which Dickens, in his most graphic pictures, could not exaggerate.

We could pursue this theme much further, and with official illustrations and painful facts could bring this interesting subject nearer home. But our object being to arouse a desire to plant shade trees in all our cities as a sanitary measure, and as a speedy means of health to our citizens, we think we can let this subject rest as it is, with one suggestion only: Remember that among our many city sanitarians we are never to forget that as sanitarians the botanist and horticulturist stand first in the rank of our public benefactors.

OLLIPOT QUILL.

ANSWERS TO CORRESPONDENTS.

PANNY WRIGHT, Troy, N. Y.—The azalia you describe as growing in a meadowy situation, upon bogs, &c., is the wild white blossomed azalia, and you can remove their plants with safety at this time, provided you can cut off the bog on which they grow without injuring the roots of the plants. Have a good situation prepared for them, and they will live without much further care, and make a fine growing plant in your garden, as they grow well in moist, shady places, and beneath the drippings of surrounding trees. Of this plant, in its wild state, there are only three or four that will repay the trouble of transplanting.

JOHN F. C. Atleboro, Mass.—The phial containing water and "peculiar looking grass," which you say covers to a considerable extent the bottom of a small brook, I find belongs to the species of *conferva*, called *oscillatoria*, and are sometimes found even in semi-purified water. The moving power of these plants is a remarkable characteristic of the species of live plant. As they lie upon any smooth surface, they will be seen to slide or move over each other in all directions, and in their name. They are not injurious to the water, but rather beneficial. As objects of scientific examination, they are very interesting.

A. J. POLLARD, Conn.—Cut your scions now, or at any period during the dormancy of the sap circulation. By this provident preparation you can commence grafting early in the Spring, and such scions, if kept in a damp place (a box of sand in the cellar) during Winter will be in the best possible condition in Spring. The growth of the previous season is the scion you are to take.

OLLIPOT QUILL.

A WONDER FOR BOTANISTS.—The St. Thomas Dispatch says that on the property of Mr. Gillis, near Fingal, Canada, is to be seen the rare spectacle of a beech and maple tree growing from the same stem without any assistance other than Nature's. Mr. Gillis says that he gets more sap from the maple part of the twin tree during the season than from any other maple tree, but that the sap is not so good, and shrewdly suspects that part of the juice of the beech is carried into the bucket. This is a sight for botanists.

Besides the four or five distinct surveys now being carried on by the National Government, nineteen States of our Union have authorized geological and scientific surveys of their respective territories, the results of which have been published in important and valuable reports—and in eight States these surveys are now in progress.

Answers to Correspondents.

We will positively answer no more questions through our Correspondent's column from anonymous writers.

MATZ.—Quail can be bought in any quantity in Chicago and St. Louis. **TRACATOR.**—Trout are scarce in the Truckee River at Reno, Cal., but are abundant in Pyramid Lake.

J. E. S., Philadelphia.—Your second communication only carries out what we Karsel would cause. The bitch, has distemper fits, and we fear you will lose her.

G. P. B., City.—Please let us know if there is any fish in Crum River; if so, what kind, and how they are caught. Ans. Yellow perch, roach, and shiners, caught with "wunns" for bait.

HOMER LEXON.—How can I ship a boat to Florida at lowest expense and quickest time? Ans. What part of Florida? There are fortnightly or monthly shoulers to Jacksonville, New Smyrna and St. Augustine. For particulars inquire at 76 and 81 South street.

WESSER, Hartford.—You can get good shooting near the Curtinck Club grounds, by going to the house of G. Van Slyke, who accommodates sportsmen. Duck shooting in the marshes and quail on the upland. Steamer from Norfolk, distance about sixty miles.

SEXTY.—Will you kindly inform an amateur sportsman where there is good rabbit shooting near New York? Ans. Go to Morris county or Barrelet Village, N. J., or to Long Island, or to Pike county, Pa., or to Deer Park, Md.

A. D. B., Holly Springs, Mass.—Please give your opinion of rebounding guns, as compared with the old style, particularly in regard to durability? Ans. The rebounding guns are equal to any others in durability, and in our opinion are the best for central fire guns.

G. N. B., Delphos, Kansas.—Can you inform me if there is a taxidermist in Kansas? Ans. We cannot learn of any. Have made repeated inquiries. Let some of our Kansas readers answer, if they know. Write to W. F. Carver, North Platte, Lincoln county, Nebraska, or F. S. Benson, Precept, Ill.

WOOD POWDER.—The English wood powder, for which so many inquiries are made, is likely to find a substitute or competitor in this country, in the wood powder manufactured by Carl Dittman. Next week we shall print the results of some valuable experiments with it, and also tell what the article is.

T. R. O., Philadelphia.—Where can I procure a folding pocket map of Ontario, Canada, showing particularly the region surrounding the Petawabie or Petawawee and Magnetawan Rivers, as I intend camping out on either one or the other next Summer, or early fall? Ans. Write to Adams, Stevenson & Co., publishers, King street, Toronto.

X. B.—The percussion composition used by the United States Government, consists of fulminate of mercury, 35 parts; pulverized chlorate of potash, 40 parts; nitro-sulfur (sifted between 40 and 140 mesh), 10 parts; gunn arabic solution, 2; gunn tragacanth, solution, 2; total, 100. Mixed and pressed moist into the shell or cap, and allowed to dry before loading. See Ordnance Mem. No. VII.

BAGNALL, Dublin.—Guns brought into this country by sportsmen must have been in use one year, or they will have to pay the duty of 33-1-3 per cent. Professional instruments bought by transient travelers abroad are not free. Breeding animals imported by citizens of the United States are free only when for their own use. See Treasury Decisions.

STEWART, Baltimore.—A work on sailing boats, probably such as is desired by your correspondent, was published by Longmans, Green & Co., in 1870, London, England, under the title of "The Sailing Boat," being a treatise on English and foreign boats and yachts, descriptive also of the various forms and peculiarities of sail, rig, &c., of the vessels of every nation, with practical directions for sailing and management. H. C. Folkard, Esq., is the author, and the work, for its size, is a very comprehensive one.—CLIPPER.

J. L., Philadelphia.—What will it cost to build a yacht 40 feet long, 11 beam, slooped rig, carrying capacity from six to seven tons, or do you want a motor boat for sale? Ans. For sailing boats, see advertisement, p. 318. Do you mean by "carrying capacity?" A twenty-four of the length you mention ought to measure from fifteen to twenty-five tons, according to the depth. No doubt if you advertise you can buy a second-hand craft, especially at this season. It is not judicious to buy such, however. See editorial in Yachting Department this week.

J. S., Midway, Ky.—In the Dec. 23rd number of FOREST AND STREAM, in answer to the question of a correspondent, I notice the mention of St. George's Island, a large barrel head, and the price of the gun with both barrels? What game is the shot barrel, and is the rifle accurate say at 300 yards? Can you procure it and shells for me? Martineau shell, or better, and price? Ans. Rifle and shot gun cannot be purchased for \$18. Gauge of shot gun will be that which you may order. The St. George's rifle is said to be good for sporting purposes. Any gun dealer in your place can procure you the weapon.

W. A. B., City.—1. Can you inform me where I can get a second-hand gun case cheap, for a breech loader, length of barrels, 31 inches? 2. Where can I get pigeons common, such as are shot from the trap for breeding? 3. What would they cost per pair? 4. In what way, or ways, can the male be told from the female? 5. How many times do pigeons breed in the course of a year? 6. What would the H & T traps cost apiece? 7. Could I raise pigeons in my back yard? 8. Any one would like to see their company create war in the camp? Ans. 1. Gun dealers often have second hand gun cases to sell. New ones of leather cost about \$8. 2, 3, 4, 5. Address editor of *Fraser's Journal*, Philadelphia. 6. Common traps \$15 per pair. 7. Pigeons should have a cotchey themselves, with eggs to the open air. We refer to doves or domestic pigeons.

N. B. KARR, Union Springs.—Will you please inform me where the best hunting and trapping ground is, where the climate is not too cold? Could one make it pay? Where is a good place for ducks? Ans. The best trapping grounds can be found only where there is cold weather and snow, such as the Coniogue, Ottawa, and Magnetawan districts of Canada, the Restigouche country, in New Brunswick, the interior of Michigan and Wisconsin, and the North Shore of Lake Superior. Traps in good localities make \$300 per season. Ducks are raised, and are sold nearly all the year round, in the autumn. Any moving north or south as the weather grows colder or warmer. Noted places for ducks are the St. Lawrence and Canadian waters in early Autumn, and later the entire coast line from Maine to Florida; also in the marshy lakes of Iowa, Wisconsin, and Michigan. It is late now for ducks at points north of Carleton Sound, North Carolina. In the Spring they will be found on the Long Island coast migrating northward.

R. U., Hancock, Mich.—1. Notice an advertisement in your paper of E. Remington & Sons, of Springfield, Mass., for visiting military officers, and send for one and have received it, but no instructions accompanies it how to use the same. Can you give the information? 2. Do you know where I can get a circular describing the Peabody Martini rifle, and who keeps them for sale? 3. Is the American made rifle adapted to shoot what is known as the "Express" bullet? Ans. 1. The use of the Remington rifle is locally permanent record of elevations, and is furnished. After you get your elevation, put on the vernier scale, and it will denote in decimals of an inch the exact elevation, which may be noted for future guidance. Messrs. Remington & Sons have written you in detail. 2. Write to Providence Tool Co., Providence, R. I., who will forward you circulars, &c. They are making at the present time 600,000 of the Peabody Martini rifles for the United States Army. 3. The use of the rifle is to take a bullet, bore a hole in the point of it, and fill it up with a plug of pine wood, you will have the so called "express" bullet.

A WEEKLY JOURNAL.

NEW YORK, THURSDAY, JANUARY 21, 1875.

To Correspondents.

All communications whatever, whether relating to business or literary correspondence, must be addressed to THE FOREST AND STREAM PUBLISHING COMPANY. Personal or private letters of course excepted.

All communications intended for publication must be accompanied with an envelope, as a guaranty of good faith. Names will not be published if objection be made. No anonymous contributions will be regarded.

Articles relating to any topic within the scope of this paper are solicited. We cannot promise to return rejected manuscripts. Secretaries of Clubs and Associations are urged to favor us with brief notes of their movements and transactions, as it is the aim of this paper to become a medium of useful and reliable information between gentleman sportsmen from one end of the country to the other; and they will find our columns a desirable medium for advertising announcements.

The Publishers of FOREST AND STREAM aim to meet and secure the patronage and confidence of that portion of the community whose refined intelligence enables them to properly appreciate and enjoy all that is beautiful in Nature. It will endeavor to no depraved tastes, nor pervert the legitimate sports of land and water to those base uses which always tend to make them unpopular with the virtuous and good. No advertisement or business notice of an immoral character will be received on any terms, and no notice will be admitted to any department of the paper that may not be read with propriety in the home circle.

We cannot be responsible for the dereliction of the mail service, if money remitted to us is lost.

Advertisements should be sent in by Saturday of each week, if possible.

CHARLES HALLOCK, Managing Editor.

WILLIAM C. HARRIS, Business Manager.

COXSAINS FOR THE COLLEGE REGATTA.

THE delegates to the intercollegiate rowing convention decided with propriety when they selected Saratoga Lake as the locality of their next contest. That place is now so identified with those deeds of aquatic prowess for which our students are famed that its desertion for another locality would be a serious disappointment to the public and we doubt not to the greater number of the contestants themselves. It has many advantages over all other places in the East, and these are so evident that a discussion of other resorts seems scarcely to have been worthy of attention. All know what magnetic effect a large throng of spectators has on men engaged in virile deeds, how it spurs them on to action and sustains them in their arduous labor, and nowhere, in this country, can such a large and enthusiastic throng be found as at the City of Springs. It is also in a central locality, and easy of access from all Eastern States, and has ample room to accommodate visitors—advantages which no rivals can show.

The objections raised against the lake are more imaginary than real, and will be entirely overcome if the boats carry coxswains, for in that case there will be no excuse for those collisions which sometimes mar the pleasure and result of the contests. Each crew should by all means carry a coxswain, for his usefulness will more than counterbalance his weight, and he will at the same time enable the best men to win, for his presence will prevent one boat from crowding on another and taking its place. Allowing that the time of the race may be a little slower than if coxswains were not carried, yet this is much better than to be driven out of it entirely, as is frequently the case, and then being embroiled in verbal contests and petty feuds which are so unbecoming to gentlemen and so very unnecessary. We therefore hope that this simple method of obtaining a fair race will be adopted and that those bickerings of the past so destructive to moral and bon homie will be unknown in the future.

—Average mid-day temperature at New Smyrna, Florida, for the month of December, 71 degree; 7 o'clock A. M., 61 degrees; 9 o'clock P. M., 64 degrees. No rain during the month, but very heavy dews.—Report of Maj. Geo. S. Alden, Signal office, for Forest and Stream.

HEATING GAME BY RUNNING.

IT is a well-known fact that any disturbance of the vital fluids of animals used by man as food, is injurious to the tenderness and succulence of the flesh; and will, in fact, if carried to excess, cause it to putrify in a short time. This would prove that the elements of putrefaction exist in the blood, and that it is aroused into action by any violent churning of the corpuscles.

Experiments varied and extensive enough to enable general deductions to be made from them have been tried, and they have proved conclusively that the flesh of those animals killed instantly and without any previous excitement, contains a most important nutritive and digestive element called glycogene, and that it is entirely wanting in those that have been run much or worried largely previous to being slaughtered.

An eminent English medical authority states that the flesh of animals killed while they are laboring under excitement or irritation has somewhat transformed the elements of its particles, and that it is therefore very unhealthy and injurious to man. This has been proven by the meat of hares that have been killed after a long chase by dogs, and cattle that have been marched long distances. If the latter have been overdriven ere being driven to the abattoir, their flesh is apt to produce gastric diseases in those who partake of it. But it does not need the testimony of this famous Esculapius to prove the truth of this assertion, for it has long been known among hunters, especially those who live largely on the fruits of the chase, that deer run by dogs are not so edible as those that are not, hence they often kill a pursuing hound to prevent the flesh of the animal from being rendered unpalatable. For this reason also, some of our best frontier hunters adopt still hunting entirely, using hounds only to track a wounded animal or to rouse it from its lair or covert.

Dear, even, that are frightened badly, have the fluids of their body so disarranged that their flesh is rendered tough and difficult of digestion.

The lesson to be deduced from these remarks is, that animals used for food should not be run, rendered excited or angry, or maltreated in such a manner as to arouse their fears ere being killed, if we would avoid unpalatable meat and liability to severe gastric diseases, which frequently lead to death. Not only should hunters take note of this, but also butchers and drovers, for any negligence on their part in such a matter may be the cause of serious sickness among those who partake of the flesh of worried or sorely fatigued animals.

CALIFORNIA RIFLE CHALLENGE.

THE challenge published in the FOREST AND STREAM two months ago, in which Co. E. 1st Regt. California N. G. offered to shoot against any military team in the United States at 200 and 500 yards, and which was subsequently accepted by Co. D 12th Regt. N. Y. S. N. G., is likely to result in a series of matches that will have a very desirable effect on rifle practice among the members of the National Guard and prove a matter of interest to the general public. The Californians, as will be seen by the appended letter, are ready and willing to test their skill at the earliest opportunity. Though novices, comparatively, in marksmanship, they have made a good record for themselves, and will, therefore, give our Eastern Guardsmen plenty to do to excel them.

Co. D will, in all probability, accept the terms proffered, so that there is no danger of the match being broken off. We shall publish the final acceptance of the challenge in a few days, and the date on which the contest is to be decided.

We have received the roster of Co. E, and that contains some sixty-nine names, showing that they have a goodly number to select their team from. Their rivals we understand have not more than half that number, so that the Pacific riflemen have an advantage in that case.

The following is the formal acceptance by the Californians of the terms proposed by Co. D:—

ARMORY CO. E. 1ST INF. REGT., N. G. C.,

SAN FRANCISCO, December 28, 1874.

To Capt. H. B. Smith, J. H. Wood, A. Wood, A. D. Farrell, and T. J. Dolan, Committee of Co. D 12th Regiment, N. Y. S. N. G.

GENTLEMEN:—We hereby acknowledge notice of your acceptance of our challenge by your letter in the FOREST AND STREAM of the 10th of December.

We accede to the conditions published with your acceptance, but suggest the following modifications:—

We would prefer an earlier day for the match than that named by you, say the first Saturday of May, as about the middle of May the Brigade is ordered out to shoot, and in June we have our annual company target shooting. We are armed with Sharp's 50 calibre rifle. We desire that the shooting shall be conducted according to the Creedmoor rules; and the team shall be taken from the men on the Company roll December 1, 1874.

We should like you to appoint some competent person to superintend the shooting here, and we will do the same at Creedmoor. Enclosed is a copy of our roll of the above date. With these suggestions we leave it entirely in your hands to draw up all the terms and forward them to us.

Your obedient servants,

H. J. BURNS, Captain,
V. C. POST, 1st Sergeant,
W. F. MURRAY, 2nd Sergeant,
C. NASH, Corporal,

Committee.

THE Columbian Society, devoted to pigeon culture, will hold its second annual exhibition in this city on February 25th.

—The proposed geological survey of the State of Massachusetts, it is expected will extend over a period of fifteen years, and cost \$25,000 per year.

PROTECTION OF GAME.

MONTHLY MEETING OF THE NEW YORK SOCIETY FOR THE PROTECTION OF GAME.—HORATIO SEYMOUR ON FISH CULTURE.—ELECTION OF OFFICERS.

THE regular monthly meeting of the New York Association for the Protection of Game was held last Monday at the residence of Mr. Robert B. Roosevelt, No. 26 East Twentieth street, the President, Mr. Royal Phelps, in the chair. A communication from the Denver (Col.) Shooting Club was received, stating that an organization had been formed for protecting game on the eastern slope of the Rocky Mountains.

Two letters of enquiry from dealers in game were read, asking the President up to what time the sale of venison, partridge, grouse, &c., was allowed by law. Mr. Phelps answered these inquiries by stating that the sale of venison was prohibited after the end of January, trout after March 15th, partridge, grouse, &c., after March 1st.

The association, through its Secretary, has issued the following warning:—

Under the provisions of the Game laws of the State of New York, (chapter 399 of the laws of 1874) it is unlawful for any person to sell, expose for sale, transport, or have in his or her possession in this State, after the same has been killed, any moose, wild deer, or fresh venison, save only during the months of September, October, November, December and January, under a penalty of fifty dollars for each offense.

The New York Association for the protection of Game gives notice that it will prosecute all dealers in game, and other persons who violate the foregoing provisions, after the 1st of January.

THOMAS N. CUTHBERT, Secretary.

January 18, 1875.

No. 52 Wall street.

The Secretary also read the following proposed amendment to the act for the preservation of moose, wild deer and fish, passed April 26, 1871:—

The second section of the act shall be amended so as to read as follows:—

SECTION 2. No person shall kill or expose for sale, or have in his or her possession after the same has been killed, any wild duck, goose, or brant, between the 1st day of May and the 1st day of September, nor any woodcock between the 1st day of January and the 1st day of September, nor any English or Wilson's snipe, bay snipe, plover, brant, meadow snipe, rail, mallard, sandpeps, or sandering, between the 1st day of January and 1st of July, under a penalty of \$5 for each bird so killed or had in possession.

The Secretary announced that in the Supreme Court, before Judge Van Brunt, he was that day successful in a suit against Messrs. Middleton & Carman, of Fulton Market, for selling trout out of season, and resulting in a fine of \$2,500. The counsel, Mr. Whitehead, said that all suits, except one, against violators of the game laws, brought during the year, had been conducted to a successful issue, and that seven cases were at present pending in the courts.

The chairman announced that the invested funds of the association amounted to \$3,400 in five-twelves.

Mr. Alexander Hamilton, Jr., and Mr. George Schieffelin were elected to membership, and the resignation of Mr. Townsend Cox was reconsidered, in compliance with the desire of that gentleman. Ex-Gov. Seymour, who was present as a guest of the association, was introduced and requested by the President to say a few words in regard to fish culture. Mr. Seymour remarked that if he had not run well through the State, he walked a good deal of it. He had gained quite a reputation as a fisherman, which he thought he hardly deserved. As one of the Fish Commissioners he would say, in case the Legislature granted the necessary appropriation, they would be in a position to stock all the streams of the State with fish. If we can thus multiply this species of food artificially to an indefinite extent we will contribute much to the comfort and happiness of the people of the State. We are now engaged hatching various kinds of fish in our place at Rochester, and in a short time we will be able to give out enough to all those who may make application.

Mr. Seymour was, on motion, unanimously elected an honorary member. The annual election of officers was then held, and resulted in the choice of the following ticket:—President, Royal Phelps; Vice President, Robert B. Roosevelt; Counsel, Charles E. Whitehead; Secretary and Treasurer, S. T. Cuthbert; Executive Committee, Francis H. Palmer, B. L. Swan, and C. Gilbert.

After transacting some further business of an unimportant nature the members adjourned to the dining room, where supper was partaken of.

The next monthly meeting will be held at the residence of Mr. Benj. L. Swan, No. 5 West 20th st., on the 2d Monday in February.

The Illinois State Sportsmen's Association, J. V. Le Moine, president, held its semi annual meeting at Chicago on the 12th inst.

The chief object of the meeting was to receive the report of the Executive Committee, who were instructed at the meeting of June last to prepare and submit the draft of a new Game law. In calling the meeting to order, Mr. Le Moine expressed the hope that members of the association would use their endeavors to secure the passage of the new law, as the law now existing was entirely inadequate to the proper protection of game throughout the State. He then read the bill reported by the Executive Committee, as follows:—

SECTION 1. It shall be unlawful for any person or persons to hunt, or pursue, kill or trap, net or ensnare, destroy or attempt to kill, trap, net, ensnare, or otherwise destroy any wild duck, goose, or fawn, wild turkey, prairie hen or chicken, ruffed grouse (commonly called partridge or pheasant), between the 1st day of January and the 15th of August in each and every year; or any quail between the 1st day of January and the 1st day of October; or any woodcock between Jan. 1 and July 1; or any wild goose, duck, snipe, brant, or other waterfowl, between April 15 and August 15.

Sec. 2. It shall be unlawful for any person or corporation to buy, sell, or have in possession in any of the uplands, wild fowls, or birds mentioned in section 1 at any time when the killing, trapping, netting, ensnaring, or destroying of such animals, wild fowls, or birds shall be unlawful.

Sec. 3. Any person or corporation violating any of the provisions of the two preceding sections shall forfeit and pay a fine of \$15 for each wild duck, doe, or fawn thus killed, trapped, netted, ensnared, or otherwise

bought, sold, or had in possession, and a fine of \$15 for each wild turkey, prairie hen or chicken, ruffed grouse, pheasant, quail, woodcock, wild goose, duck, snipe, brant, or other water fowl thus killed, trapped, netted, ensnared, or otherwise destroyed, bought, sold, or had in possession as afore-said.

no great advantage of this paper over ordinary journals in the fact that *every one of its readers is a user and buyer* of articles pertaining to some one of the various pastimes which it is specially devoted. All parts of the paper are filled with careful scrutiny, and no inquiry ever went forth from its columns without an answer. The Advertising Department should be a complete compendium and directory

pleasure trip also is one to Matanzas, where there exist
of a Fortress, which are supposed to be of more
the origin than any structure in the Ancient City. A
left here on Tuesday of last week for this locality

New York—*Painted Horse*, Dec. 10, January 15th.—I saw an article in a late issue of the *Bosc*, and SUGRAM relating to antlered deer. Last November I had the good fortune to assist in killing a yearling doe with horns of good fortune to quite small, but nevertheless they were fair horns, and I appeared to be a very masculine appearance. They had the appearance of being about two inches long from the skull. I have killed a yearling doe with horns no larger than these. I sent the head to Elliott C. of the Smithsonian Institute. Deer have not been so plenty as before in twenty years; over seventy-five have been killed in the town alone during the past season. Ruffed grouse have also been very abundant, while foxes are so plenty as to be

The first thing to find out about a boat is her age. Five years is about as old as is desirable under ordinary circumstances, as boats, as they are built now-a-days, begin to get old when they pass this age. However, if a boat is very strongly built and has been well used, she may be some years older before showing signs of decay. But it is not best to buy a very old boat, as the repairs will cost almost as much as it would to build a new one. The timbers should be examined closely and the planks all sounded and the condition of the butts carefully noted. The planks near the garboard should be particularly observed, as there will be a leak there if they are not pretty sound, which cannot be stopped without putting in new planks. If the boat has a center board the case should be examined round the bottom, as it is a great place for leaks.

The kind of fastening used is also an important item to look to. Copper is undoubtedly the best, as there is no rust from it. The great objection to it is the high price. Builders seem to favor galvanized iron, as it is much cheaper than copper and does not rust to any extent. But a boat fastened with common iron is to be avoided, as the rust eats right into the wood. A boat painted white cannot be kept looking decent after she is a few years old if fastened in this way.

Laystreaks are not near so good as smooth sealed boats. They are not so strong and are much more easily strained. If they once begin to leak it is almost impossible to stop them. They can be built ever so much cheaper than the others, and always sell at a good deal lower, but they are growing more unpopular every day, and there are not many of them built except small ones. So long as a boat's hull is in good condition, the state of the rigging and spars is of minor importance, as the expense of putting these in shape is not very great.

There are many who get tired of their boats and do not take the trouble to keep them looking decent, neglecting to paint them each season. When they want to sell they find it hard work, as people are apt to judge a good deal from outside appearances. This is foolish, as boats under these circumstances may be in first rate condition otherwise, and the expense to the buyer of repainting should not prevent him from buying as he may get a bargain.

READY ABOUT.

SOMETHING NEW FOR YACHTMEN.—In our issue of 27th August, 1874, speaking of "The Commodore's Signal Book and Yachtsmen's Vade Mecum," we strongly recommended the work to our aquatic friends in these words:—"The book has evidently been compiled with great care, and from official sources, and we hope that its reception this year will warrant its becoming an *Annual*. No expense has been spared in rendering it most attractive, and the paper, typography, printing of the charts and general excellence and taste of the work throughout, render it by far the handsomest volume of the kind we have ever seen."

We are glad to find that our remarks have been endorsed by the Yachting Fraternity, and that the work will henceforth appear as "Manning's Yachting Annual." Mr. Manning is Secretary of the Jersey City Yacht Club, and one of its Directors, and is also either a member or an honorary member of many of our principle Yacht Clubs. With the facilities which he possesses, combined with his ability and energy, the work must take and hold a place in yachting literature, which has never been supplied up to this time. "Hunt's Universal Yachting List," an annual which our English cousins have to be satisfied with, is "nowhere," and our American yachtsmen have good reason to thank Mr. Manning for his work, and be proud to possess a copy of it. To insure accuracy and obtain full information in the preparation of this manual hand forms of Register and Record are sent to every secretary, measurer, yacht owner, builder, and sailmaker, one form for each yacht to each; Mr. Manning thereby obtains five returns for every yacht.

COLLEGE REGATTA.—The Rowing Association of the American Colleges met at Hartford last Thursday. The following delegates were present:—

Amherst—R. M. Smith, G. W. Clark, Brown—S. J. Woodbury, F. Lawton, Columbia—E. L. Rapallo, J. K. Rees, Cornell—Chas. Harman, —Ensign, Dartmouth—S. B. Wiegman, J. Foster, Harvard—H. S. Van Duzer, S. D. Warren, Jr., Princeton—A. Alexander, B. Nicoll, Trinity—W. J. Roberts, J. Brington, Williams—F. Johnson, C. Gilbert, Wesleyan—W. H. Down, H. C. Hermanns, Yale—C. H. Ferry, R. J. Cook.

The first business transacted was to vote on the legality of the assemblage, as the regular meeting should not come off until April.

The New York City college had no delegates present, as it does not intend to be represented in the regatta.

After the election of some officers a discussion of the rules for rowing in races was inaugurated. The most important question in this was the rule which requires every boat to take its own water, from buoy to buoy, and not to wash any competitor; and also, in case of a foul, to give the referee the right to order another race, except in case the boat fouled shall be the winner. Committees from New London and Saratoga were present to present the claims of each place as the scene of the regatta. The New London committee was headed by Mayor Waller, and presented a written statement, as to its showing of advantages. It was voted to hold the regatta on Wednesday, July 14, but the hour was not named. Columbia moved that it be held at Saratoga, and on that motion spectators were excluded, and the members of the association held a private session, which was quite a success. In the secret session there was a tie between Saratoga and New London, and the chair voted in favor of Saratoga. The convention

unanimously adopted the report of the committee of the whole.

At the evening session a long discussion arose on a motion of Harvard to allow coxswains, and it was urged that with coxswains better time can be made. Cook, of Yale, opposed the motion as forcing too radical a change. The motion prevailed—Yale, Wesleyan, Dartmouth and Cornell alone opposing it. Subsequently Cook moved that it be left optional with crews to take coxswains or not. This was passed by the casting vote of the chair. Columbia voted for it, as well as for the original motion. Mr. Ferry, of Yale, moved that each course be buoyed on each side at least once in each eighth of a mile, and this was passed, Columbia and Harvard opposing. It was voted to have two authorized witnesses, not college men, to view the race and testify in case of disagreement. It was also voted to give each college a judge, also to tax each one \$25 and give the usual prize colors.

The regatta committee selected were—Eustis, of Wesleyan; Dayton, of Princeton, and Ferry, of Yale. Adjourned to meet at Springfield, April 7.

ROYAL HALLFAX YACHT CLUB.—The annual meeting of this club was held at the Club House, Renforth-street, Halifax, on Monday the 11th of January. The meeting was well attended and much enthusiasm was manifested by those present in the welfare of the institution. The medals given by his Excellency the Governor General for competition in 1874, and won by the yachts *Squirrel* and *Cygnel*, were presented to their respective owners. The following gentlemen were elected officers of the club for 1875:—

Commodore—Alex. W. Scott, Esq., yacht *Cloud*. Vice-Commodore—George A. Black, Esq., yacht *Peterel*. Rear Commodore—C. A. Hutchins, Esq., yacht *Kate*. Treasurer—William Compton, Esq. Secretary—F. C. Sanichast, Esq. Assistant Secretary—W. D. Creighton, Esq. Auditors—William Lawson and W. W. Groom, Esqs. Sailing Committee—James Kerr, John Muir, C. B. Bullock, W. G. Widdell, Thos. Wastell, Esqs. House Committee—Flag Officers and Secretary, F. W. Bullock, W. W. Groom, J. R. Murray, Esqs. Measurers—D. McPherson and Thomas J. Bentley, Esqs.

MR. BISHOP'S CANOE CRUISE.

PAPER CANOE, "MARIA THERESA,"
LAKE WACAMAN, N. C., January 13, 1875.

EDITOR FOREST AND STREAM:—Having followed the intricate water course inside the beach from Renforth, past Bogie, Reer, Brown, New River, New Topsail, Old Topsail, Rich and Queen's Islets, I could not proceed further inland to Cape Fear, on account of the shoal water, and then one hundred rods of open land, at the Emma Nixon plantation, twelve miles from Wilmington, the canoe was put upon a cart and hauled to the city, from which I reached Lake Wacaman, by rail thirty-four miles. This beautiful lake at Flemington Station is eleven miles long by five miles wide. Mr. Short owns nearly two thousand acres of land in this vicinity. The crooked Wacaman flows out of the lake into the sea, and with the breeze, flows past Georgetown, S. C. There it is less than one hundred rods of open land from this point to Georgetown, the river is so crooked that I must follow its current one hundred and sixty-five miles to reach the city, and one hundred and eighty-five miles to reach the sea coast.

To-day I will follow the river seventeen miles; yet at night I shall be only four miles from the point of departure. From the Lower Wiccan my canoe will be reached by paddling through Bull's Creek; then my course will be through the tree plantations of that river to the sea. I hope to reach Charleston in about fifteen days' time, via Bull's Bay and interior passages along the coast. I have received so much kind attention from the people of North Carolina that I shall never regret having passed through the sounds and coast rivers of their State.

I remain, very truly yours,

N. H. B.

The Colleges.

—The Yale *Record* says the new college boat house will certainly be finished in time for use in the Spring—a very handsome building. The lower story will be occupied principally for storing boats, the upper story will contain the club room and dressing rooms, and is surrounded by a very broad veranda, which will be a delightful lounging place during the Summer term. The roof is steep, with projecting windows, and gives the building something the look of a Swiss chalet. The interior arrangements will be very complete and perfect.

HARVARD UNIVERSITY, January 11, 1875.

EDITOR FOREST AND STREAM:—The Christmas recess having ended we are back at our old routine. The cold weather has put a stop to all out of door sport, and we have to resort to the "varsity" only for exercise. New rowing benches are now being put up in the gymnasium, which are said to be very great improvements on the old ones, as they give one who is "coaching up" a chance to practice all the movements required, as well as the boat itself. There is a report that the "Giant" of '77 thinks of trying for the "Varsity." He will probably need to train hard in order to stand a chance with those who are already in good rowing trim.

MARTIN.

HARVARD UNIVERSITY, January 15, 1875.

EDITOR FOREST AND STREAM:—The Freshman class held a meeting on Wednesday last, to take action in regard to boating matters. Mr. Otis, of the "Varsity," addressed the meeting. It was voted that a crew be sent to the next regatta, and several hundred dollars were subscribed on the spot to defray expenses. There are quite a number of men already at work in the gymnasium, and it is probable that "Varsity" will represent the college in the regatta. The Chess Club, at their regular meeting, voted to have a tournament for determining the champion player of the club. Each member who hands in his name is to play a game with each other contestant, and he who wins the most games will receive the first prize and the champion cup, the next best player taking the second prize. The prizes are very handsome sets of chessmen.

The Juniors are not very enthusiastic over boating matters, and at the meeting last week only about a baker's dozen were present. The Collegiate Rowing Association endowed an unusual degree of unanimity and good feeling between the colleges at the recent meeting, although the transactions were not entirely satisfactory to Harvard, nor to what she seems for the best interests of college boating. The Saratoga course, if the proposed conditions are agreed to, and the buoyed course, will undoubtedly prove satisfactory to all. The substitution of the regatta race of the National Rowing Association is a decided improvement. The final vote in regard to coxswains is decidedly contradictory to the previous decision of the members; but as it is the will of the majority, "so let it be." It seems as though as far as the regatta is concerned, as far as the same footing, and this can not be if some are allowed to leave their

coxswain at home. It is hardly probable that those colleges who voted for coxswains will be very apt to visit themselves of the privileges of carrying them when it is absolutely certain that Yale, Amherst, Columbia, Wesleyan, and others will row without them. All admit that coxswains are desirable, but reasons of expense, &c., overcome any petty considerations, such as the success of the next regatta and the introduction of better principles.

MARTIN.

PRINCETON COLLEGE, January 10, 1875.

EDITOR FOREST AND STREAM:—The intercollegiate literary contest has resulted very satisfactorily, as far as Princeton is concerned, Mr. A. Manquand, '74, having been successful in obtaining the first prize in essay writing on this occasion.

The gymnasium possesses new attractions this term, in the shape of four handsome Colandermen furnished billiard tables, the gift of Mr. Pine, of New York, who had already endeavored to bestow them on the students of Princeton by the munificent present of \$100 to the '77 crew last Spring.

Two of our oarsmen—Messrs. Ely, class of '77, a member of the University crew, and Reid, '76 of the Freshman crew—distinguished themselves by walking from this place to Washington, D. C., during the past vacation. They made excellent time, and performed the feat very creditably, notwithstanding the bad condition of the roads.

Both the University and Freshman crews have begun work in the gymnasium.

QUINCY.

PRINCETON COLLEGE, January 16, 1875.

EDITOR FOREST AND STREAM:—The regular meeting of the Princeton Boating Association took place to-day. The report of the delegates sent to the Regatta Convention, which met at Hartford, on Wednesday, was read, and unanimously adopted. Though, unfortunately, unsuccessful in her efforts to introduce rowing with coxswains, Princeton has much to congratulate herself on, in securing other advantages paramount almost to this. The principal honor that she received was the election of Mr. J. C. Dayton, '73, as the second member of the Regatta Committee, which is composed of three representatives—one from each of three colleges belonging to the association. The subject of coxswain was discussed by Captain Nicoll to-day, who showed very clearly that although it might be better for all the colleges to row with coxswain, if they would so agree, still, Princeton will suffer any inconveniences or disadvantages from those which may befall other institutions. On the contrary, she has many advantages, perfectly apparent to any one familiar with her rowing crew, which no other college possesses. The semi-annual election of officers of the Association also took place to-day. A. Alexander and B. Hall, '75, were re-elected respectively, president and vice-president; P. Marlow, '76, was elected secretary, and W. A. Butler, Jr., '76, treasurer.

QUINCY.

NEW HAVEN, January 16, 1875.

EDITOR FOREST AND STREAM:—The junior appointments were announced a few days since. They are too long for publication, and hence only the highest are given:

Philosophical Orations—John B. Gleason, Arthur T. Hadley, William W. Hyde, John Kendrick, George W. Rollins, Edwin D. Worcester.

High Orations—Eliza S. Bolton, Edwin W. Brown, George E. Bushnell, George E. Conner, Leverett H. Sage, Charles H. Wilcox, Frank A. Gaylord.

In all, they number sixty-five, which is about the usual quota for a class—numbering what '76 does. On Wednesday the Literary Board is to be elected from the Junior class. There are to be chosen five editors for the *Varsity*, and five for the *Record*. Yale Ziegler, who has been the oldest, and said to be the best college magazine published. By a coalition of the two junior societies, the following ticket will in all probability be elected: J. B. Gleason, E. P. Howe, W. W. Hyde, J. M. Marvin, K. B. Smith. The ticket is generally decided upon in a society caucus before the election, and the meeting of the class is merely for form, as the non-society men in a body vote in the matter, although now constituting one half of the class. All college is discussing the "Promenade," which is to occur on the 24th of February. Fine music has been engaged and an abundance of invitations sent out. On Monday evening next the President gives his first reception to the Seniors of all the departments.

About the Rowing Association which met at Hartford I passed so many good resolutions in my mind, which will surely result in a fair race, and need not be said: We are glad to notice that less wrangling and useless dispute over trifles was indulged in than ever before. The way in which the mooted questions were met and discussed is surely creditable to the delegates. We are sorry that any new colleges were admitted, as the number in the association before was large enough, and we applaud the action on our side going with the best feelings. We are glad that Saratoga was provisionally chosen as the place for holding the regatta on the 14th of July, and we hope that the final decision may be in its favor. The committee who have the whole matter in charge constituted as follows: J. E. Eustis, '74, of Wesleyan; J. C. Dayton, '73, of Princeton; and C. H. Ferry, '74, of Yale. To them we all look for a successful regatta, and may we not be disappointed. K.

National Pastimes.

For Forest and Stream.

MY FIRST CURLING MATCH.

THE memory of my first curling match carries me far back to the early years of rising manhood, long before I had thought of crossing the sea, that now separates me from the land of my birth. I could not but span the distance between me and the scene where I won my spurs, as remembrance carries me over the quarter of a century of intervening time. The figures of those who took part in that little drama of my youth appear to me more vividly as the years pass by; and now that the snell breath of the "ruler of the varied year" sharpens the air and braces the relaxed nerves, I am polishing the alms shawl, or work in the Grand Park, while my memory has wafted me away to the picturesque valleys of Tulliallan.

We were to play a neighboring parish a two-rink match for our own glory and the benefit of the poor, a bow of meal having in the good old fashion been made the stake. It is a pity, by the way, that in these hard times of misery and want, the same custom is not in vogue here. I hope yet to see it introduced, were it only that the game might be transplanted to American soil. I could not but remember which has charitable intent to recommend it, and which is indissolubly associated with the pastime in the mind of many an Old Country currier. But to return, I was but a stripling at the time of which I write, and plumed myself not a little upon being chosen to play in a parish match. The skip of our rink, Tom Kennedy, a farmer in the neighborhood of Falkland, had undertaken to teach me the game in which he gloriied, and I seemed to him that by dint of patience and the strictest attention to his instructions, I might be a credit to him yet. I had arranged to sleep at his house the night before the match, and the picture of his fireside on the long Winter evening is as clear before my eye at this moment as the reality was then. "Fast by the ingle, bleedin' finely" we sat, while the old man, pipe in hand, and with the flicker over and lighting up his enraptured face, dilated upon the bonspiel of his earlier years, and explained the almost miraculous

STEARNS' STEREOSCOPIC

Natural History

For Object Teaching in Schools,

PARLOR ENTERTAINMENT.

We are prepared to furnish the first sixty numbers of the first series of

Animals and Birds of North America.

To these will be added a second series of foreign specimens, and various Animals and Birds in grotesque attitudes, never however violating their natural instincts. We offer these views as pictures, and as studies from nature. One of the great moving elements in our modern system of education is object teaching. The interesting illustrations, the stereoscopic transparencies the animals and birds from their natural habitat to the rooms of the student, and the first of our home, where they cannot fail to leave a lasting impression of the form, color, habits, and locality of each specimen.

An experience of more than twenty-five years as Taxidermist of the New York State Cabinet of Natural History, and in gathering his large collection of native and foreign specimens, and Mr. Stearns to combine in every view the locality of the specimen with its appropriate rocks, woods or water, and coloring from the originals.

TESTIMONIALS.

CORNELL UNIVERSITY, ITHACA, March 14th, 1870.
I must congratulate you upon your great success in this new educational enterprise. If we can arrange our arrangements so as to make them impart instruction to the mind, it will be a step in advance in education.

WASHINGTON, D. C., March 18th, 1870.
I am much pleased with the success you have met with in giving to the student specimens a very decided appearance of life. I hope you may be able to continue the Series, and I have no doubt they will furnish interesting means of information and instruction in regard to the wild animals of New York. SPENCER F. BARRI.

STATE HOUSE, BOSTON, Mass., March 18th, 1870.
I have examined carefully the Stereoscopic Studies of Natural History, and judging by the first ten numbers, should say that they will prove of very great value, both as objects of study for students, and as most interesting sets for the parlor. The delineations, position, and color of the different groups of animals and birds are most perfect, and I cordially recommend them to the public attention, and trust you will meet the encouragement which you have earned. EDWARD A. SARGENT, Curator of Zoology in Mass. State Cabinet.

PEABODY ACADEMY OF SCIENCE, SALEM, Mass., March 19th, 1870.
I have shown your Stereoscopic views to the Directors of the Academy and the editors of the *Naturalist*, Dr. Packard and Mr. Morse. They concur with me in praising their truthfulness and the taste which you have displayed in arranging the specimens with natural objects and scenery of characteristic kind. They are certainly better fitted, not only as parlor and drawing-room illustrations, but as educational illustrations for the use of schools and colleges, than anything we have yet seen.

ITHACA, N. Y., March 19th, 1870.

I have received the Stereoscopic Studies of Natural History, and have enjoyed them greatly. They have surprised all who have seen them by their truthfulness and beauty, both as regards the animals and their surroundings; and I think they can not fail to be of great service to the study of Natural History, first by affording students to see and next by presenting them in it.

American Wild Fowl Shooting.

BY JOSEPH W. LONG.

Describing the habits, and methods of shooting wild fowl, with instructions concerning guns, blinds, boats and decoys; the training of water retrievers.

This book is written in plain English, and in a most attractive style. A broad, and at the same time accurate view is taken of duck shooting in all parts of the country. The habits and feeding grounds of the mallards, blue-winged teal, pin-tail, wood gull, and golden retriever, are fully described, and other kinds of ducks, geese, swans, &c., have been carefully and ingeniously studied and given to the reader.

In thirty chapters the author has furnished information for the young, as well as for the practical sportsman.

"A book for sportsmen, by a sportsman."—Argus.

"Tells where to find game in the morning, in the afternoon, and in the evening."—Sun.

"Almost indispensable to the sportsman."—Academy.

Published by J. B. FORD & CO., 27 Park Place, N. Y. For sale by all booksellers and the leading sporting shops. Price \$2. Sent by mail by the Publishers. Also for sale at the office of Forest and Stream.

For Forest and Stream.
WON'T WE MAKE THE TURKEYS SING?

BY MRS. LUNICE R. LAMBERTON.

WON'T we make the turkeys sing,
By and by, by and by;
As we shoot them on the wing,
You and I, you and I?

When the lazy moonlight streams
O'er their flight, o'er their flight,
With its mellow Autumn beams
All the night, all the night?

Crack the rifle swift and sure,
When they rush, when they rush,
Out from covert dense, or moor,
'Mid the brush, 'mid the brush.

Won't we track them as they run,
Spindle shanked, spin the shanked,
Catching health as well as fun,
Never flanked, never flanked?

Chase them o'er the river wide—
Blaze the gun, blaze the gun,
Drop them on the grassy tide,
One by one, one by one?

Gobble, gubble, end aloof,
With a will, with a will,
Bag them, drag them home as proof
Of our skill, of our skill.

Won't we make the turkeys sing,
By and by, by and by;
As we shoot them on the wing,
You and I, you and I?

Rochester, N. Y., Jan., 1875.

Vernon.

A SEQUEL TO "SANTA MONICA."

IT was a perfect Californian Winter day. The sun, undimmed by cloud, was sinking slowly to his rest in the broad bosom of the Pacific. The last wagon, piled high with boxes of oranges intended for the next day's upward-bound steamer, had vanished behind the mission buildings, and the rumbling of its heavy wheels became indistinct as its dusty trail settled again to earth. The week's work was done, and yet the heavily-laden trees to the right and left of the house scarce showed the abstraction of their golden fruit. From the broad verandah wherewith I inclined in a bamboo chair, in all the luxury of idleness and content, a fair picture of a lovely land presented itself. On the right, and scarcely half a mile distant, the little village of San Gabriel nestled under the protecting shadow of its church, the largest and best preserved of these monotonous of the country's earlier colonization. Its dark hued orchard, in which orange trees of sixty years' growth were still paying rich tribute to the padres, was surrounded by a cordon of lighter hued but equally aged olive trees, the whole crowned by a clump of noble date palms, planted nobody knows when, or by whom.

To the left, the eye ranges unchecked for miles over verdant pastures until it rests upon old Mount San Bernardino, which, with snowy crest, stands like a giant sentinel at the entrance to the valley. In front, the range of lower hills which form the southern boundary of the valley open for a space to allow the San Gabriel River to find its way to the sea, which, although twenty miles distant, seems from the glimmer of the sun upon the water and the half mirage caused by the wide bed of sand beyond, to be washing the base of the hills. Directly in the gap an immense cottonwood tree has assumed the fantastic shape of a ship under full sail, ever there yet ever sailing. For hours I watch the phantom craft, expecting momentarily to see it disappear behind the point; but there it stands, receiving the heavy freight of day dreams with which I load it, until it comes to seem almost part and parcel of my destiny. Behind the house, the valley slopes upward, covered with well kept vineyards and orange orchards, until the timber

belt is reached, and the dark masses of the Sierra Madre tower for thousands of feet above all. The tinkling of the sheep bells as the flocks seek the nightly protection of the corral, and even the monotonous chant of the celestial, Aho, as he prepares the evening meal, sound musical. The little terrier, Jack, in vain endeavors to entice the sober eyed setter, Rose, to a game of romps, as she partakes of her master's reverie, and dreams with him of other days and scenes. A row of ungainly muscovy ducks come waddling up the little stream which passes the house, and the scattered chickens, satiated with grasshoppers, come in from the fields to seek digestion on the roosts. Truly, this must be Eden, and the peace that of Paradise.

The pounding of horses' hoofs upon the hard road and stopping at the gate, disturbed my dreams, and the figure of a horseman passing between the two tall *Eucalyptus*, or Australian gum trees, which stand at the entrance to the grounds, attracted my attention. The figure bestriding the little mule, with feet almost touching the ground, seemed familiar, and in a minute the hank form of my old friend Grizzly Bill was unfolding himself from his mule and grasping me by the hand.

"Como te va? I'm mortal glad to see you, Capitano."

Since my residence in the valley I had jumped the intermediate grades and been promoted at once to that of captain; the fact of my being able to take a Henry rifle to pieces and put it together again had been seized upon as an excuse. Said Bill, as he breveted me—

"We can't be calling people mister here, and as it's gone out of fashion to call every one above the rank of vaquero, Don, you must have some handle to your name. We'd make you a colonel at once, but two in the family might mix things."

Glad as I was to see Bill, the tidings he brought me set my heart thumping most violently.

"We left Santa Monica," said he, "the day before yesterday, and stopped last night with Don Andreas, at San Fernando. The Colonel he went on to Los Angeles with the señoritas this morning, and I pushed on through the mountains and across the Aroyo Seco without going to the Pueblo. They'll all be here to-morrow, and then I guess, Cap, you'll have more of a house full than you've had yet."

After supper, we took our pipes and sat on the verandah, while Bill good naturedly answered my thousand and one questions about my friends.

"I say, Cap, this almost beats Santa Monica. Who'd a thought you'd have made the place look like this in a year?"

"Well, there has been a good deal of work done," said I, as I looked with some pride at the neatly trimmed vineyard, where not a weed was visible, and at the rows of orange trees and the well appointed outbuildings; "but then, you see, I had the advantage of some one else's start. I find that if you do your work well in this country, and fight the gophers, everything flourishes. Plenty of water and don't spare the plow points, is my motto. Do you think Col. Forrester will be pleased?"

"More nor that, Cap. It's no use talking, it takes you Eastern chaps to make things look slick. Why your house is more homelike than the Colonel's, and if Miss Nita don't like your fixins, why dog my cats if I don't think she ought to be wallowed," and Bill puffed furiously at his pipe at the bare idea of any one not liking Vernon.

With the exception of an occasional run up to Santa Monica, the past year had been spent in hard labor, and now my dear friends were to make me a visit, leaving behind them on their return my little comradita, who was to link her fortunes, for weal or woe, to mine. In the dim twilight I can just see the phantom ship against the lighter ground of the Western sky. Everything set, royals above to gallant sails! Whither was she bound; to bring me my bonny bride, or to carry her away to unknown seas? Was this day dream, the brightest of them all, to go with the rest? The twilight deepened into darkness, the weird

ship vanished, and Bill's cheery voice broke the silence.

"The Colonel asked me to tell you, Cap, that he might have to go up to Lyttle Creek Canon while he was here, to see about his timber lands, and he thought as if you weren't too busy you might go along, and we'd have a hunt. Old Glenn, who crossed the plains with me, has got a good cabin at the forks, where the señoritas could stay, and as you can't do much huntin' after you're married, you know, you'd better make the *pasear* while you kin."

Go? Of course I'd go; with nothing to do for a week, what could be more delightful than a camping expedition with Nita and the Colonel, to say nothing of the Senora and Donna Inez and Pablo. The latter couple were married now, and joined the expedition to see the last of their little sister. Bill declined my offer of a bed, preferring to roll himself in his blankets on the verandah, and, after seeing his mule fed, I swung in a hammock by his side until the increasing chilliness of the night air warned me to retire indoors.

It was late the following day before my eager eyes discerned the wagons crossing the plain which lies between Los Angeles and San Gabriel, and old Bill thought me demented as I jumped on my horse, which had been saddled all day, and dashed down the road to meet my friends. How natural they looked! First came the familiar old spring wagon, with my dear little comradita seated by her father, with the Senora behind, and Donna Inez, followed by the ambulance driven by Pablo, with the baggage and old Juana, who could not leave her *chicuta*, perched on top.

The ladies were escorted into the house, and with some little trepidation I showed the Colonel the home I had prepared for his daughter. It was undoubtedly owing to the excellent lessons derived from his experience which enabled me to make so good a display. In spite of the thousand and one annoyances which beset the new comer, the *unlearning*, the total abandonment of all pre-conceived ideas, which becomes an absolute necessity to the agriculturist in this country, I had achieved the success of making two blades of grass grow where one flourished before, and was proportionately elated. The climatic effects and the changes of the seasons are so new to the Eastern man that it is at first difficult for him to realize the fact that his harvesting begins when his planting would at home, and that his stock really requires more of his attention and care in the Summer than the Winter.

The Colonel approved of everything, and prophesied not only a lovely home, but a certainty of income. One portion of my enterprise surprised even him, and I mention it here merely to show the extreme hardness of the orange tree in this climate. On my first arrival in Los Angeles, a street was about to be carried through one of the orange orchards of the place. For a comparatively small sum I purchased all the trees which came in the way of the proposed improvements, and with the aid of some Chinese gardeners successfully transplanted some fifty of them to San Gabriel. The following year they were covered with thick foliage, and on the third the majority of them bore a paying crop of oranges.

The house, a cross between the native hacienda and an East Indian bungalow, excited the warmest expressions of admiration from the ladies, and little Nita, with moistened eyes, thanked me for all I had done for her.

In the evening we gathered on the verandah and discussed the proposed expedition to Lyttle Creek, and it was finally agreed that we should start on the following day. For hour after hour we sat, watching the moon gradually rise over the mountain peaks, whose snow covered summits glistened like silver in the bright beams; and the oranges almost sparkled amid the bright green foliage. Gradually the whole valley was lighted, and my old ship loomed up in strong relief against the gleaming horizon. I called Nita's attention to it, and tried to impart to her some of my own superstitious feelings, at which she laughed and called me a silly *genio*.

At high noon on the following day we started on our

ten miles in length, by from one to three in breadth, joined by a strait to another lake nearly as large, lying southeast, called Burnt Bay Lake, and is one of the chain of lakes connected by the East Bay River of the Bay of Despair, already noticed, as running through Serpentine Lake, which forms a part of the great route of the Indians.

October 14th.—We left the veteran Mountaineer (James Smith by name) much pleased to our having fallen in with him. He landed us from his canoe on the south shore of the lake, and we took our departure for the westward, along the south side.

There is a considerable quantity of fir wood on the borders of Jauenson's Lake. We fell in with a Summer as well as a Winter's beavers' house, both of them inhabited, evidently by the same family, this being the time when they are changing their abodes. We found one of them here, ever, at home, the houses were about half a mile apart, the Summer one on the edge of an artificial dam, and the Winter one in the middle of a small pond, surrounded with birch trees on the acclivity of a hill. The first snow fell this afternoon with a gentle wind from the north-northeast, and so thick as to compel us to shelter and encamp in a wood that happened fortunately to be so near. It continued to snow heavily, the atmosphere about our fire was extinguished and threatened rain. But the still uniform fall and pressure of the snow over our screen, and the blankets in which we were wrapped kept us warm.

October 16th.—In the morning three feet of snow covered the ground in the woods, and on the open ground it was deeper. Our provisions were exhausted, nor could we get through the snow to look for game. Weakened and miserable we looked anxiously for a change of wind and a thaw. The trees were loaded with snow. At night a thaw came, but with it a southerly wind that brought both the snow and many of the largest trees to the ground together. There being no frost in the ground, the roots of the trees were not sufficiently bound in the earth to stand under the extraordinary pressure of snow and wind. Our fire was buried again and again by the snow from the trees, and as we were so likely to be killed while standing up as lying down, the snow that crashed and shook the ground around us all night, we lay still, wrapped in our blankets amid the danger, and providentially escaped unhurt. The birch had attained a pretty large size in this sheltered spot, under the lee of a hill, which I called Mount Misery. In the forest, while the storm raged above, it is calm at the foot of the trees.

October 17th.—We were still storm-stayed, and could not renew the wreck of the forest close to us. Our situation was truly miserable; but the snow was fast melting away. I felt alarmed at the Winter setting in this early, for the consequence we could reach the sea coast.

October 18th.—The snow having shrunk a foot at least, we left our wretched encampment, and after a most laborious walk of six or eight miles through snow, thickets, and swollen creeks, and passing many deer, trapping holes in the snow with their loads, we reached the Indian country without, however, being able to get within sight of them, we not only reached the lake to the westward, but to our great joy, also discovered in consequence of meeting with some of their martin traps, the encampment of the Indians, of whom we had been told by the Mountaineer. My dress, once gray, now bleached white, was seen by some of the Indians as we emerged from a spruce thicket, a great distance from the party, who were encamped in a large wigwam, or kind of hut. We entered with little ceremony, my Indian kissing them all—male and female. None of them could speak English, and only one a little French. A deer skin was spread for me to sit on, at the innermost part of the dwelling. My Indian interpreted, and introduced me in the same particular terms as before. They were Miekmarks and natives of New Brunswick, and expressed themselves pleased to see me in the middle of their country, as the first white man that had ever been here. The Indian among his fellows is a purely self-dependent being—an innate power of self-dependence raises him above dependence upon others, and keeps him beyond their interference, even in distressing wants, which yields mental triumph and glory. Want implies inability in the hunter. I observed these people bestow, and they received at the same time, with a good grace. He smoked the pipe given to him with the same composure as after a feast, although starvation and unconcealable hunger were depicted in his countenance. Supper was soon ready, which consisted entirely of boiled venison. All seated around the fire, in the centre of the wigwam, partook at once, although enfeebled by want of sustenance, I could eat only a few mouthfuls. The jaws would not perform their office with regard to meat and fat, and the stomachs refused to stomach sympathized, for it could bear but little. They told us that we might reach St. George's Bay in about ten days; that they had left that place in the middle of Summer, and had since then been hunting in the western interior—several weeks latterly having been spent at this lake, where deer were plenty, and that they intended in a few weeks hence, before the lakes and rivers are frozen over, to sail to White Bear Lake, at the southward, to spend the Winter; that place having been always celebrated for immense herds of deer passing by the Winter season. The Indian idea of a road is to Europeans little else than a probability of reaching a distant place alive—and I foresaw from their report, much suffering before we could reach St. George's Bay. Here were three families amounting to thirteen persons in number. The men and boys wore garments made of deer skins, the hair outside, and belted round them, which looked neat and comfortable. Their caps were of mixed fur; they had not procured much fur for sale, only a few dozen martin, some otter, muskrat skins; of beaver skins they had very few, as beavers are scarce in the western interior, it being too mountainous for woods, except on the sheltered borders of some of the lakes. In the woods around the margin of this lake the Indians had set many traps, equal to eight or ten miles in extent, set with wood traps, or dead falls, about one hundred yards apart, baited for muskrat, which they visited every second day. They had two skin canoes in which they paddled around the lake to visit their traps and bring home their game. The Red Indian country we were told was about ten or fifteen miles northward of us, but that at this time, as the Mountaineer had likewise informed us, these people were not in the habit of visiting there, they were there they were accustomed to lay up their Winter stock of venison. Those people corroborated previous as well as subsequent inquiries, respecting the number of their own, and of the other communicating tribes in the Island.

(To be continued.)

THE NORTH WOODS WALTON CLUB.

For Forest and Stream.

THE writer had the good fortune and great pleasure of being one of thirty or more, who, in the leafy month of June, 1899, were camped with their guides on the Fourth Lake of the Fulton Chain. If this article meets the eye of any one of the number who were present on the memorable occasion, the writer desires to extend to him his cordial salutations.

I believe that the Walton Club culminated at this time, i. e., that it never existed or since included so many in one camp, whatever may have been the number, who since, in separate companies, and in the name of the Father of Anglers, have sought the North Woods waters. I have met such from time time roving in different portions of the wilderness on their delightful excursions, but never have I seen collected as one party in the wood so many as were united in more senses than one on the occasion of which I refer. There were present a judge, several editors, several lawyers and a clergyman; a citizen of New York, who has since been Mayor of the metropolis; Ned Buttline in his peculiarity; men of business and jovial fellows generally.

As was natural, I went in early with the first instalment of six or eight, who were *acant couriers*. Having been encamped about a week, I well remember the formal reception, so unique in character, extended to the main body of Waltonians as they joined us in our solitude, which, yet, I have never seen chronicled. It was known when they would arrive, and every arrangement was made to welcome them. All the guns in camp were loaded and brought to the strand. All eyes were strained in the direction of the approaching flotilla of seven or eight boats. When within hearing distance a salute was fired, which was answered by the canoes. As they neared the shore every barrel was discharged. Judge B., in his enthusiastic manner, a trout and from his top waved welcome. The President, Gen. S., being in one of the boats, the Vice-President, G. D., (bless his soul), gave the word: "Three cheers for our guests!" which were given with a will. Then from the boats came response: "Three cheers for the men in camp!" and they followed: "Three cheers for the man up the tree!" A very large trout—some claimed four pounds for it—fastened to a branch and suggested to me, just significantly in the vicinity. "That game the steps ashore, the shaking of hands, mutual recognition, and on the part of some, quenching of thirst."

Speaking of that trout introduces a very agreeable subject. Your readers will not be surprised to learn that vast numbers of singularly beautiful fish, with bright spots, graceful in form, of a springing nature, and very savory on table, were captured. Numerous other fish far larger, but not half so gamey or pleasing to the eye, were brought from deeper depths and captured by me. I am happy truly to report that your humble servant did at least his full share. By the way—yes, eminently by the way—I caught a 6½ pound laker where "there were none." I have often found best luck where I have been told it was useless to fish. I was crossing the third lake at the time, my guide informing me that there were no fish in it, or, at all events, caught out of it; but I preferred to let my line be overhauled, as the very canoes and captain, and, finally, I saw my reward. The same, or similar was true on the eighth lake afterward, and on other lakes.

I recollect one day passing up from first lake with my prizes, I met in the same boat two of the best fellows of the club coming down. Alas! as in the same boat, they have since crossed the waters of Jordan. My boat was well supplied with spoils, so that they remarked with satisfaction. I told them it was true, I was, and they said to be a good Waltonian. They replied: "You didn't catch any more." But the best basket of trout, i. e., of the largest that I saw brought into camp, were so brought by my friend Judge B., and I know where he took them. He had just returned from a trip to the Raquette, and he caught them at the bridge between the Raquette and Forked Lake. "As fast as I threw in," said he, "I would go on my line." "You were very lucky," and every day his sorrow, he would not be comforted, because he could not produce his prizes at home before his wife and friends. Have not all anglers felt this, so that they know how it is themselves? Where splendid trout are caught, they cannot well be shown or served to friends. The Judge was sorrowful in the midst of his joy, because his really fine trout were far from home.

Sunday came, and we had service. The President conducted the Chapter to his "serpuit." It was on rising ground overlooking the lake, where in front there was a clearing, and around it trees. Full forty, including guides, comprised the congregation. Prayer was offered; a hymn sung; the forest was made vocal with the praise of the glorious Creator, and the Chaplain preached. He directed the thoughts of all upward through nature to nature's God, and summoned to thankfulness for the pleasures and blessings they were enjoying by his Providence. He claimed that ISAAC WALTON was a pious man, a Christian, a keeper of the Sabbath, and that his name should not be taken in vain; that those who professed themselves Waltonians should emulate the virtues of the grand old fisherman. He spoke of the moral black flies that pestered so many in the woods, and said he would rather meet the natural ones, &c., &c. After service, all with one accord made and kindled a pipe for the hour, and thanked him for his counsel. This was said to be the first time that a clergyman ever officiated in Brown's Tract on Sunday; but it is hoped that there have been many similar instances since.

Major S. was the life of the party, with his sparkling wit, exhaustless jokes, and ready eloquence. He cared nothing for fishing, inasmuch that he would contrive to pass his line into other hands, if he found it jerking. Just hold my line for a few minutes. Certainly. Why there's a fish on it. Put it on then. "To think," he said, "of a man being excited about a fish." "Why, Major," I replied, "I saw you excited about a mosquito this morning." But around the crackling blaze, at night, his speech burned brightly, and crackled as decidedly. And then his songs. I hope ever to remember the melody of his voice, as it sounded across the waters, in the Canadian boat song. He would moult a song, unexpectedly at any time, and one would go some space, or recitation, amusing or eloquent as the case might be. I recollect one day arranged that dinner should be served at the Island Elba at a given hour. When the hour came, most of the expected guests were wanting. They had found luck far away, and were too much "excited about a fish" to leave

for form's sake. The Major took it rather hard, being excited about the dinner, which he had carefully prepared; but standing on the barren rock with uncovered head, cooled by the fanning winds, he delivered himself of a characteristic speech, which alone would have rewarded those who kept his appointments.

After this, with O. E., I took guide and boat for the distant inlet. At this time the water was calm, and the breeze in our favor; but returning at evening, we had a right to be anxious, as others were for us. The wind had risen in high degree, and with it the waves, which were capped and raging. Some other fishermen, whom we found at the inlet, watched our progress a long time to see how we stood the opposing breakers. But the boat was true, and the crew was strong, and though we met from head to foot with the dashing spray, and we shipped much water, we came safely to land. I enjoyed, after all, that somewhat perilous row, in the spirit of Street when he wrote—

"Bound onward, bold bark, leave the tame earth behind;
Thy path is the white wave, thy breath is the wind;
Dash whither thou wilt, wave, wind, neighbor thy glee,
And a way over the wild rolling waters for me!"

After this we planned and carried into effect a trip to the North Branch Lakes. In the Club's Blue Book for '98, it is said: "They are to be reached only by severe effort by land and water, and none should undertake to visit them, except those inured to the hardships of the wilderness." I have been somewhat *inured* it must be confessed; but was entirely unconscious of severe effort, on the contrary, the excursion was to me a luxury from beginning to end, unless except a rainy day. I was sorry that the company was in such a hurry to reach the camp on Big Moose or Sherman's Lake, for it was a pity and trial to have the waters of those tempting outlets with deep pools disturbed by wading guides before fishing them. Still, by keeping ahead a little, I caught some fine specimens on the way. *Memo.* We shunted over night on a route, and who that was present can forget the wonderful string of fresh trout that was brought into camp that night by M—s and son, of Brooklyn, which were caught in what is called, I believe, the Indian Hole?

Reaching camp it began to rain; but after dinner I took my guide, recrossed to the outlet, and had rare sport in it, filling my basket before I returned. The lake I remember as a gem of beauty, with Echo Island in the midst, and a noble frame-work for the wonderful string of fresh trout that was at the time in bloom in great profusion, and lined the shores with pink. In the midst of these flowers, as I glided along the shore, I saw a spotted fawn looking intently at us. Of course I didn't shoot, for I would not if I could, and could not, if I would. I had no gun. But the scene "was a picture for painters to study."

On our return I remember that with several others, I detained the party at the crossing on an hour. "Cause why? I was catching trout." Who cares what time of day it is in such circumstances! But a storm was coming on. Night approached, and natural darkness was made doubly dark by overhanging clouds. We accomplished a large part of the way in crossing by the light of forked lightning, and the shouting of the guides. There was considerable growling and muttering of thunder over our heads, but there was none in the party. We all reached the shore safely, where the boats were returned for shelter till the shower passed away; when launching them we were "once more upon the waters," advancing happily by the light of its hospitable fires toward the camp, which seemed like home. There was the largest and best built slanty I have ever seen in the woods. It was water proof, and capable of accommodating thirty men side by side in their snoozes; and there as a chimney tapered, save as the smoke was interrupted by occasional snore. I recollect where a sleeper was thus enjoying himself at the expense of some consequent wideawakes, he was approached by one of them on behalf of the rest, and well shaken with the remark accompanying: "You want to turn over on the other side." All the fellow wanted, obviously, was to be alone. There was the long drawn table, with its tree seats, its bark cloth and cushions. "Off and away" two years ago, and even then, all was obliterated; not a vestige remained of what constituted the camp of '99. One after another many who were then and there present in the buoyancy of health and strength have become dust; some, especially of the guides, as Bill Wood and Morse, were cut down during the war, and others have fallen by accident or disease. Can you wonder that there recur to me the familiar but immortal lines of Shakespeare, beginning—

"Our revels now are ended."

You know the rest.

—P. S.—It occurs to me to add, as showing the possibilities of early June in the wilderness, that the weather was at first severely cold. Of this I retain three distinct recollections.

1. I was in a snow storm on the lake.
 2. One morning a cup of coffee was borne to me on a plate of ice.
 3. It may have been the same morning, when some determined not to leave the camp. "As for those persistent fellows," said the Major, "who will fish, they will have to take a cub with them to break the ice for them."
- The Walton Club can do it, and after the ice is once broken all will be well." I saw no deer on Fourth Lake that season, nor heard of any; but saw several on the North Branch, and one was brought into camp.

Utica, N. Y., Jan. 5, 1895.

AMATEUR.

—A French gentleman, M. de Launay, has succeeded in banishing from his farm at Courcelles a form of spenic disease which is fatal to cattle and sheep, by giving the animals free access to carbonate of lime. He had observed that the cattle staked next to the walls of the sheds were in the habit of licking the whitewash, and they did not suffer. He placed chalk in small tubs accessible to the rest and the animals were not attacked. Certain sheep, which were then isolated from the rest and deprived of chalk, were attacked by the splenic disease as formerly.

—While a party of gentlemen were hunting at North Haven last Thursday their dog went into a rabbit's hole so far that it was impossible for him to find his way out. The dog was dug out Sunday alive. When found he was a rod from the mouth of the hole. After the dog was out, curiosity excited the gentlemen to know what was there, and they dug two feet further, when the dog suddenly sprang to the hole and captured a fine rabbit and nearly devoured it before he could be made to let it alone.

Fish Culture.

**This Journal is the Official Organ of the Fish Cultur-
ists' Association.**

PROF. BAIRD'S REPORT.

DIFFERENT METHODS OF MULTIPLYING FISH

As far as the theoretical multiplication of fish is concerned, we have to deal especially with four principal methods. The first, and simplest, consists in transferring fish of both sexes, whether still young and requiring further growth, or fully mature, and especially at about the period of their spawning, from one locality to another, where they can make themselves at home, and in due course of time increase their numbers. This method is especially practiced in the United States in the case of black bass, pickerel, pike perch, yellow perch, alewife, or fresh water herring, the brook trout, etc., and to some extent, indeed, the white fish, or *Coregonus albus*, and, indeed, is almost the only method by which it is possible satisfactorily to accomplish the desired object; the efforts of pisciculturists not having been very successful in impregnating the eggs of the white fish with the white fish, hatching them out, although there would be no particular difficulty in regard to the alewife.

A second method, quite similar to the first, consists in simply collecting and penning up the mature fish in a suitable inclosure at the time of spawning, and keeping them until the operation of reproduction is accomplished, but without taking any special charge of the eggs themselves.

The third is most especially practiced by the Chinese, of collecting the fertilized spawn, after it is laid, either by gathering it from localities under the water where it has adhered, or by straining it out while floating. The first method is in some instances assisted by introducing bunches of ozier brush into the water frequented by the gravid fish, so as to furnish convenient objects of adhesion, and such as can be readily handled for the purpose of removing the eggs from them. The eggs thus secured may then be transferred to any given locality and allowed to hatch naturally, or they may be artificially prepared and attended to, as in the birth of the young, when they are either allowed to escape into the water at once, or else they are fed for a short time and then consigned to the ponds or streams, which it is desired to stock.

All these methods are inferior in convenience as well as in economical results to the fourth, which is adopted by most fish culturists throughout the world. This consists in taking up the fish when ripe, and, by suitable manipulation, in pressing out eggs from the body of the female into a dish, and then by repeating the operation with the male, so as to force the seminal fluid into the same vessel. In some cases the eggs and milt are stirred together in a certain amount of water; in others, the milt is usually applied to the eggs in the form of a cream, as is usually credited to a Russian, M. Vrasski, in which no water is used with the eggs, but the milt is slightly diluted with water and poured upon them. By this method a much larger proportion of eggs is impregnated. The movements preliminary to this treatment of the eggs taken from the living fish are very varied. In many instances a careful watch is kept over localities where the fish are likely to spawn; and when the experienced observer notices that the operation of spawning is about to take place, he captures the usually inactive pair by means of a net, and constructs a spawning apparatus, and proceeds with the work of exclusion and fertilization.

This is said to be the principal method by which the eggs of the salmon are obtained in Germany and elsewhere for the national and private establishments, and liable to the disadvantages of great uncertainty, and to a dependence upon conditions of the atmosphere and of the water that may materially interfere with the general result. Most of the doings in connection with the hatching of shad are of this nature; the seine being swept at a suitable locality, and the fertile fish stripped of their eggs and milt. This operation is always followed by a rough handling, and the operation is not endured such rough handling with impunity. It has also been adopted in some cases for salmon, having been adopted by Mr. Livingston Stone in obtaining their eggs during the season of 1872.

A much more satisfactory and efficient method consists in inclosing the fish in pens or pounds until their eggs and milt are sufficiently matured to allow the process of artificial fecundation to be initiated. With trout such an inclosure is usually permanent, but for salmon it is generally temporary. This treatment is also adopted with the whitefish which are taken in the Detroit River in the Fall of the year, while running up to spawn from the deep water of the lake, placed in enclosures for incubating purposes, and kept there until sale, from time to time, during the Winter. Unfortunately, under these circumstances, they furnish the opportunity for artificial impregnation and hatching on a very large scale.

The simplest mode of obtaining salmon for the purpose of hatching is that adopted by Mr. Samuel Wilmot, at New Castle, Ontario. This gentleman, observing a few years ago that a few salmon were in the habit of coming up a small stream to a favorite spawning ground, conceived the idea of penning them up as to control them during the period of reproduction. He accordingly built a house over a basin in which they collected, or adjacent to the spawning ground, and above a gate could be dropped and the fish imprisoned. In this way he has been able to secure a large number of salmon, and with them has carried out, for the most part, his labors in connection with salmon hatching.

A more feasible method, and one which can be conducted out on a much larger and more efficient scale, is that now practiced by Mr. Charles G. Atkins at Bucksport. This consists in securing the living salmon by any means at his command, the most ready being their purchase at the salmon weirs at the mouth of the Penobscot River, where they are taken in considerable numbers and kept alive for any length of time. These are brought in suitable floating cars to Bucksport, transported on trucks to the hatching establishment, and placed in a pond of about 150 acres, where they find ample room for their movements.

As already explained, it is not necessary to provide the breeding salmon with food, since they do not take it during the spawning season; and they exist for the several months necessary to retain them with comparatively little mortality. Mr. Atkins' experiment was initiated, in 1871. In 1872 he had nearly 600 fish by the 1st of July, of which very few were lost. In the months of October and No-

member he took from these fish 1,500,000 eggs, very few of the fish being injured in the process. They were then placed in the water and permitted to return to the sea, the precaution being taken to affix a metallic tag corresponding to the number, weight, and sex of the fish, and the date as recorded, so that if recaptured at any time some idea might be gained of their rate of growth, movements, and migrations.

The eggs thus obtained, whether of salmon or of trout, are hatched out in contrivances which vary with the kind of fish, and which will be more especially referred to hereafter. Suffice it to say that those of shad are hatched in boxes which float on the water of the stream adjacent to the camp where the fish are captured and fertilized; this being accomplished within a week, and after a further detention of a few days, or until the yolk bag is absorbed, they are turned into the middle of the stream at night, while the predacious fish are most quiet or lying near the shore, and soon find hiding places for themselves.

The eggs of salmon and trout require a period of from two to four months for development, this being in the Winter season. This process consists in placing them in boxes, with the bottom composed of parallel glass slats or of solid boards, laid in gravel, over which water is uniformly circulated. The temperature is allowed to remain constant until the exclusion of the young takes place. Sometimes trays are used with wire gauze bottoms, either singly or in tiers, and the water caused to flow either from above downward or the reverse. After this the young are sometimes transferred to some other receptacle until the yolk bag is absorbed, when they are introduced into the river and the streams or else retained in ponds, and fed artificially for a greater or less length of time.

The key not to the treatment of the anadromous fishes lies in the now well established axiom that each will at all ways endeavor to return to spawn, if possible, to the very spot where it was first introduced into the water as a young fish, and that it will make every effort to accomplish this result; sometimes incurring even loss of life by persistent labor to this end. This is fully believed by all who have given attention to the subject, and in this we have the guarantee of success in any attempt to stock a particular stream. The only exception to this axiom is in the case of a profitless task, since the river might be, as already explained, and probably would be, a party having no interest in common with the sower. So universal, however, is the principle just enunciated, that we are assured that if three streams empty into the same bay on the coast, or are tributary to the same principal river, and all are equally eligible for the maintenance of anadromous fishes, although destitute of them, one of these may be stocked and abundant with fish, while the others which have been neglected will be almost entirely unvisited, or will possibly become supplied very slowly and after a long period of time.

—The Massachusetts Anglers' Association has now about 550 members.

—The Hon. E. A. Brackett and Benjamin P. Ware of Marblehead addressed the Boston Anglers' Association Wednesday evening, last week. Regarding the preservation of deep sea fishing, Mr. Ware said that trawling would ultimately exterminate the cod, haddock and pollock fisheries on our coasts. The evil of mackerel seining was also mentioned.

—The American Geographical Society held their annual meeting at the hall of the Historical Society, New York, on Tuesday evening, the President, Hon. C. P. Daly, in the chair. The Hon. Robert B. Roosevelt addressed the Society on "The Geographical Distribution of Fish in the United States."

Natural History.

For Forest and Stream

THE POMPANO, (*Bothrolemus pompanus*,) HOLBROOK
THE CAVALLI, or CREVALLE, (*Caran-*
defensor,) DEKAY.

THE above are certainly distinct species, though probably belonging to the same family. The first is a bottom fish, solitary, and usually taken at night with nets; rarely takes the hook, and seldom reaches three pounds in weight.

The cavalli goes in schools on or near the surface, takes bait troll, or red rag, with eagerness, and grows to the weight of ten or twelve pounds.

The pompano on the table is one of the most delicious of fishes, being both rich and delicate. The cavalli is dry and tasteless, like the dolphin. The two species much resemble each other, and are often confounded. Even so accurate a writer as Holbrook does so.

The principal structural differences are these: In the pompano the first dorsal is represented by six spines, the snout is truncated, the mouth rather small and toothless. The cavalli has two dorsal fins, a sharper snout and a larger mouth, with conical pointed teeth. In color, both are changeable, the prevailing colors of the pompano being blue and silver, those of the cavalli green and gold. Both are very brilliant fishes. That the pompano will sometimes take the hook, I know, having taken one of two and a half pounds weight with clam bait while fishing for sheepshead on the bottom, near Mosquito Inlet, East Florida.

Our boatman, who had fished those waters for twenty years or more, said it was the first pompano he had ever seen taken with the hook there—the cavalli we used to take almost every day in April, and he pointed out the difference between the two species at once. He also said that they spawned at different periods. My single specimen was the most active and vigorous fish, and gave as much fight for his size as any fish I ever killed. When, however, read of pompanos being taken with the hook in great numbers, or their jumping into boats, and of their occurrence as far North as Holme's Hole, I think the cavalli is the fish indicated.

S. C. CLARKE

—The sum of \$75,000 was paid out for sponges in Key West during the months of November and December last year.

THE GRAYLING.

NOUVELLE, BONAVENTURE,
CANADA, JAGGERY

EDITOR, FOREST AND STREAM:—

I enclose to you the dorsal fin of a grayling which I caught in the river Terne, in Shropshire, England, about eighteen months ago. It is a celebrated place for this fish, and the Leintourndine Clab, which controls this river, is very exclusive, so that the fish as a rule are large and plentiful. Please compare it with the Michigan fish, and kindly inform me whether they are identical, or only similar. Grayling are a very gamey fish, and I should like to see them introduced into this neighborhood.

Yours truly,
CAPT. J. M. C.

We thank you for the grayling fin. We have never seen one before, and are glad to compare it with that of the American grayling, which lies before us. We sent one of the latter to the London *Field* some months ago, by whose editors it was compared with theirs, and the points of difference noted. These are very decided. We reprint from *FOREST AND STREAM* of August 13th the statement as transferred from the columns of the *Field*:-

"The fish shows some qualifications which are very distinct from our grayling. The eye is much fuller, rounder and more prominent; in the British grayling this is lozenge-shaped and sloping back. The peculiarity which the artist could hardly fail to remark. The dorsal fin, though large in our grayling, is very large in the Michigan one. The anal fin, too, is much more extended and lengthy, and the ventral fins longer and more lance-head shaped. The spots, too, only extend to half way along the dorsal fin, whereas in ours they run to the whole length of the fish; and the colors are very different. The colors of the Michigan grayling are varied and marked. In fact there is very little doubt that the Michigan grayling is not our grayling."

IS THE CANADIAN SEA TROUT A BROOK TROUT?

EDITOR FOREST AND STREAM

I fully agree with your observing correspondent, Mr. S. C. Clarke, that "there is much difference in opinion among those who have written on this subject." Hamilton Smith, I think, without a scientific description gave it the specific name of *Canadensis*. Mr. Perley also without giving its specific characteristics, refers it to *S. trutta*, a species common to the North of Europe, and entirely different. Norris, in his "American Angler's Book," tried to establish it as a new species, and succeeded for the time, as he thought, in doing so, according to the specific name given by Hamilton Smith, *S. trutta*, Mr. Norris, in his "Angler's Book," gave it the name of *S. trutta*, the American Angler, as a prelude to an acknowledgment of error, and before I "come down," let me give you my account of the various phases under which I have seen this fish, and thus show why I have gradually changed my convictions.

It had been told by my canoe-men that they had never seen a trout without spots, but the very next Summer after issuing the first edition of my book, I fished on the Nepisiguit, in June, trout without the semblance or vestige of a red spot, with perfectly bright silver sides; and I was not alone in this discovery. The following year I was equally usual on brook trout of that size. In July, 1869, when with Mr. Wood, of Poughkeepsie, I explored the Grand Cascapedia to find the pools where the huge salmon of that river rise to the fly, we also found trout, some of them weighing four pounds, without - spots, and as bright as the fresh-run river-sided trout. The Indians insisted that the trout of the Cascapedia were not of the same fry, and, not so cooking of our Restigouche Indians could spoil them. We frequently ate "bunks" of them, and were coming in from our evening's salmon-fishing. These were trout *fresh run from the sea*, where their food had, to a great extent, been their same which gave the salmon its flavor and delicacy. The early part of the season, when the trout are small, is called *the Venetian* by the Indians. The New Brunswick Fishery, who told me that, in his estimation, I had not established *S. canadensis* as a species different from *S. fontinalis*, and suggested that I should take trout frequently during my trip and weigh them, how this bright-sided fish grew darker later in the season and how it was changed by the Indians' cooking, and how it was changed by itself in those of bright vermilion, with the orange colored belly of the brook trout. Mr. Yeung was the only intelligent, close observer of this fish, in all its change of hues. I had ever met with, and becoming skeptical as to there being two species, I was anxious to correct any error of mine, and was made by a single Summer's observation of this fish to own my error before.

After leaving the Grand Cascadepaid I fished for trout in the neighborhood of Delouishie, in the Jacquet, and later in the sea-on on the Nepisiguit. On the last named river, about eight miles from its mouth, a small stream, known as the Pabineau, enters, after passing through some low, still pools, bordered by water grasses and lily pads. This is a famous place for trout in August. Here I took them of all shades, generally the deeply tinted into the lily pads, and the brighter, fresh run, pinkish as firefly cutler, into the Nepisiguit. The trout of all sizes and colors were taken, but that the trout that the trout is a brook trout—our old friend, *S. fontinalis*—that its habitat, for the time being, and its food, effects all the changes in its tints.

So of course I cannot now agree with Mr. Clarke "that the brook trout makes its permanent home in fresh water, and that "the sea trout is anadromous" in the same sense in which we regard the salmon. There is no telling how long those without spots had been at sea, or in the salt estuaries or bays feeding on pretty much the same kind of food that salmon do; no telling how long it takes for a sea trout to clothe itself in the bright spots and hues of the brook trout, but I conclude from my observations here recorded that they are one and the same fish.

The matter of food, as all will admit, has much to do with the migration of animals, terrestrial and aquatic, and the brook trout acts up to its instinct in deserting its native stream, where food is scarce in winter, and for the time becoming a sea trout. And although really the same species, I consider the local names ("sea trout" when fresh run, and "brook" or "river trout" when they have been up some time) as quite appropriate.

CAVALLI, OR POMPANO.—In answer to "B. Hackle"—The fish depleted by Norris is called by both names in the New Orleans market; but seldom by the former amongst the Creole fishermen, and almost exclusively by the Americans by the latter name.

FROST FISH.—In answer to a query by "G. D."—I have always heard the frost fish, which come in October and November into the rapids of the inlets connecting the Saranac lakes to spawn, spoken of as a small specimen of *Coregonus*—i. e., white fish.

THADDEUS NORRIS.

—The Des Moines (Iowa) Register says that among the curiosities presented by the California salmon planted in the Des Moines River at that place, Wednesday, were some malformations singular enough for a cabinet of wonders. General Baker has some of them preserved in alcohol. One fish has two heads, one has two tails, one is double both in head and tail, but has only a single body. One was shaped almost precisely like a California black cricket, having four fins fashioned like legs, and antennæ instead of gills.

—Vinal N. Edwards, of Wood's Hole, Mass., has, during the past two years, collected for the Smithsonian Institute at Washington, 117 different varieties of fish, including several species never before taken on this coast.

—A countryman from the interior of the State ate so many clams the other day, at Fulton Market, that it caused his stomach to rise and fall with the tide.

YACHTING IN FLORIDA—NO. 3.

WE awoke at our mooring at Orange Bluff, and found a fair bright morning. As soon as the sun was well up my cronies of the evening before came with their guns on their shoulders, followed by half bred hounds. The steam was impatiently escaping, so no time was lost. Our skills were tied astern, and off we went against the dark tide of the river to a port some miles above, where we staid up to a steep bank and tied the yacht to a tree.

Here under a superb oak, with wild orange trees all about, we made a camp for the ladies, and then took skills for a stretch over shallow water. We landed at last in a tangle of orange trees, palmettos, vines and cypress, all forming a beautiful mass of foliage, with a carpet of moss. The bitter oranges, more fair and golden, and much larger than the sweet fruit, hung in bunches that weighed down the branches, and seemed almost to cast a glow in the deep shade.

From this cool retreat, we worked our way to a more open upland, where a few scattered pitch pines cast a meager shadow. The ground was sandy, sometimes bearing a little wire like grass, with here and there some pretty wild flowers of unfamiliar form and unknown names, and at other points covered with the low palmetto, a carpet of the mossy, light green cabbage palm, or culled from a row of saw-like teeth on each edge of its flat stem. The leaves were about shoulder high, rendering it prudent to keep hands and gun elevated to avoid sharp rasps from the serrated stems.

Our course led along the edge of a cypress swamp, keeping a few rods from it. As we followed along after the hounds, which were now slowly beating about the neck of the swamp, I got into companions. John Foster and John Lee, some idea of "jumping deer." The deer, here very numerous, hide and harbor in the swamps during the day. At night they come into the "pine open" to feed, returning leisurely as dawn approaches, leaving on the dew a trail that remains until the sun is well up. The hounds strike this scent, and dashing into the swamp, alarm the deer in their day repose. They will not run long in the wet ground, where vines and briars, which break out and make for the scrub islands, which are upland thickets of thorn and rough low trees, where they find refuge and rarely leave it. As the only chance for shooting them is between the swamp and the scrub, it is not desirable that the dogs should be staunch. Half bred hounds, or even curs are the best, as they soon abandon the trail and return to follow another one into the low ground. As we came where game was expected, we separated to cover a large interval between the cypress and the thickets, and walked slowly on, waiting to hear from the hounds. It was not long before their exciting tones were heard, when we stood motionless by pine stems for concealment, and listened eagerly to gain an idea when the game would break cover. It was not my luck to see this first chase, as the baying hounds swept around a low hill to a point where Lee had gone, and our only knowledge of its termination came from the report of his gun, and a distant whoop of exultation following, announcing his success. The dogs remained with Lee until he came in bearing a fat young buck, which was concealed from the keen eyes of the buzzards by a covering of palmetto leaves, when we went on as before. The dogs followed a number of trails, but no deer came out for a long time, and we were about turning back when a large buck burst from the swamp with a look at his head and almost jumped on Foster, who pitched up his gun and fired within ten feet, but the buck saw the sudden movement and dodged so quickly that a shot through his ear was Foster's only mark. Now sadly frightened, he sailed over the palmetto leaves, running between Foster and me, so that for a moment I dared not fire, but could only watch his graceful bounds, until when out of range of the guide, I sighted him on the bank and shot him, but he fell feet under him again, but fell in a merciful death. He was old and grey, large and tough, a wary old fellow that had probably made many an escape from hounds, or from the more fatal enemy, the panther.

It was now midday, and the grass too dry to retain a trail, so we made our way back to our boat. The guides staggering under the load of game, while I found loud enough in adding their ponderous guns to my own.

We rowed back to the yacht and found that some fish had been taken, while the engineer came in with a wildcat he had shot as it was skulking along the river's edge seeking fish.

We lunched under the bearded oak, and then Madame started on a shopping expedition in the yacht to the one store at Yulush, seven miles down the river, to get fresh supplies for the domestic department of the boat.

White and lesser herons were lighting on some trees in some low islands not far away, seeming preparing to roost there; so embarking again in a boat I had Foster leave me concealed among the overhanging vines, where I crouched down with a vivid sensation that it was just the haunt for moccasins and alligators. After the boat was far away groups of heron swept around and over the island, scanning it with keen eyes, and then winging their way on as if uncertain; but as night came on the desire to roost there overcame their suspicions, and they came thick and fast, giving me numerous shots more or less favorable. When Foster came for me we gathered in a number, losing one that I fancied an outlying alligator took.

The plumage of the white heron, or "angel bird," fills me with endless admiration, so pure and light are its sprays, and the white of its wings and tail, and its legs were free from stains. Laying them in careful order, we started to pull back to meet our steamer. The darkness came, and we were well on our way before her light was seen. She came after us, but we told Paul to leave

us to row to Orange Bluff, so she turned about and went dashing by us, leaving us rocking in her wake.

She was tied fast when we came to her, and calling for a light, we came quietly alongside, holding our white birds up to show like phantoms against the darkness. They were hung in the cabin, much to the delight of our little passenger, whose fancy was charmed with the beautiful birds. Orange Bluff was very pleasant, and the kind hearted residents in place offering to take us in with his family, we concluded to send the yacht home and enjoy his hospitality.

The fishing was excellent, and from here we made excursions of very great interest. Two Indian mounds are here of marked character, which have been examined by Dr. Wyman and others.

There are no public houses near here, and all is undesirable, so it was a privilege we fully appreciated in sharing Mr. Carr's home.

Other trips were made, and of them, perhaps, more some other time. One can hardly go amiss in Florida if prepared to seek natural interests, and leave Saratoga trunks, and watering place amusements and dissipations behind. Those who want the resources of fashion will do well to linger in Jacksonville or St. Augustine, and leave yachting and Bohemianism to the easily pleased lovers of wild life.

L. W. L.

—The Smedley Brothers, foot of Court street, Brooklyn, have just finished a twenty-foot boat for Captain Hopkins of Brooklyn, now in progress of construction two others, the first, twenty-five feet long, for Mr. Meeker, of Amboy, N. J., the second, twenty-two feet in length, for a New York gentleman.

The prizes won last season by yachts of the Brooklyn Club, it is reported, will be presented at the February meeting.

The schooner Tarolink, N. Y. Y. C., Messrs. H. A. Kent and H. A. Kent, Jr., will leave port in a few days for a lengthened trip to the West Indies.

Mr. P. McGeehan, of Pampano, N. J., is building a small cabin sloop for parties in Cambridge, Mass. She is 28 feet on deck, 10 feet 6 inches beam and 4 feet depth of hold. The sloop yacht Playful, B. Y. C., is in winter quarters at this yard. Mr. McGeehan is at work finishing a sloop, 48 feet overall, 14 feet 6 inches beam and 5 feet hold. She is intended for a cruise on one of the Western lakes.

The steam yacht building at Krypton, N. J., for Mr. Ricker, of Elizabeth, is \$9 feet over all.

At the next meeting of the Eastern Yacht Club, to be held February 9, it is probable that the members may take into consideration the present "sailing regulations" with a view particularly to ascertain if any advantageous changes can be made in the rules as to "sails to be carried in races" and "allowances," and it is desirable to ascertain, as early as possible, the views of yacht owners and others interested on these subjects, such gentlemen are requested to state them in writing to Secretary Henry B. Jackson, No. 114 Federal street, Boston, previous to the 2d prox. With regard to "sails carried in races" the following suggestions have been made—

First.—To leave the rule as it now stands.
Second.—To alter only the clause relating to gaff-topails, restricting the yards to "working topsails," or "topsails to be set aloft."
Third.—To do away with all balloon sails.
Fourth.—To allow the lower sails only, viz., For schooners, mainsail, foresail, fore-and-aft sail, and byrigg; for sloops, mainsail, fore-and-aft sail, and byrigg.
Fifth.—Same as No. 4, with the addition, "Boats to be carried as usual when sailing."

Sixth.—Same as No. 4, with the addition, "Working topsails."
Seventh.—Same as No. 4, with the addition, "Working topsails" (which would allow balloon sails).
Eighth.—Same as No. 4, with the addition, "(topsails set aloft)."
Ninth.—Sloops to be allowed to carry balloon topsails as a studding sail or spinnaker, but not from the mast.

The following objections have been made to these suggestions:—

To the second.—That the lower sails of some yachts are small, and they require the racing topsails, that the topsails of some of the smaller yachts are necessarily too short to admit of topsails being set aloft to advantage.

To the third.—That the working sails, gaff-topails, and jibtopails are liable in some yachts to be in effect "balloon sails," and generally the impossibility of defining properly what are "working" and what "balloon" sails.

To suggestions 4, 5, 6, 7, 8, 9 it is objected that such rules would be very likely to result in many yachts, and that the tendency would be to increase the size of the lower sails to extravagant dimensions.

Regarding "allowances," the following suggestions are made:—

First.—To retain the present system.
Second.—To return to the original system of "water line."
Third.—To adopt the Club system of displacement.

Fourth.—To adopt a system of area, to be ascertained by adding the beam and draft together, and multiplying such product by the length, such area to be applied to a new table of allowances, to be prepared by those favoring the adoption of this suggestion.

It has also been suggested, with reference to the mode of measuring for length:—

First.—To retain the present mode "on water line."
Second.—To measure the length "on deck over all."
Third.—To take the "mean between the above two measures."
Herald.

—The officers of the Seavanhaka Boat Club of Brooklyn, for the current year are—President, Charles A. Girdler; Vice-President, James A. Pickett; Secretary, W. H. Goodnow; Box 2425, N. Y. City; Treasurer, J. A. Kelly; Captain, John Keppel; Investigating Committee, Geo. Hathorn, Robert H. Orr, Frank Adee; Trustees, Fred. A. Fox, John M. Ranken, C. B. Elliott, A. W. Fiske, Richard Dixon.

—The amateur regatta, to be held in Troy this Summer, will far surpass that held there last year, which is saying a good deal. The Laureate and Ulysses clubs will spare no pains to make it a success. A larger number of clubs will be represented than last year. The Beaverwicks, of Albany, who won the association prize, will have the same crew.

—At Frederick Wright's shipyard at Islip a sloop yacht is in course of construction for Captain Foster S. Clark. Her dimensions are 37 feet keel, 10 feet beam, and 4 feet 6 inches hold. She will be launched about the 1st of May.

—Mr. D. Cronan's clipper brig, "Elsie," Capt. Lovegrove, arrived yesterday morning from Mayaguez, P. R., having been absent only ten days from this port. This vessel has made seven trips to Porto Rico and back in 11 months and 21 days, three weeks of which time she was laid up undergoing extensive repairs. Her performance is hard to beat. —Herald Reporter, 19th.

STARTS.

Boston, January 4, 1875.

EDITOR FOREST AND STREAM:—

All those who are interested in yachting must know that one of the most important things in a race is to get a good start. Now, where there are twenty or more boats entered for a race, I claim that it is impossible to get them off fairly, except by a flying start. At the City Regatta held in Boston last Summer, some of the boats were half a mile ahead of the others at the start, and a good many captains did not hear the signal for starting, (a steam whistle) but took their cue from the other boats which were near enough to hear it. Of course there was a good deal of grumbling at the prizes were awarded. This trouble could all be avoided, by adopting the rule of the Eastern Yacht Club in regard to starting, which seems to give general satisfaction. The yacht start is in irregular order, and the time of each is taken as it passes the Judges' boat. The City Regatta always brings together more boats than any other, it would be well for those who have charge of the matter to attend to this in time, and thus prevent the occurrence of another such blunder as that of last year. Yours, &c.,

READY ABOUT.

Answers To Correspondents.

Anonymous Communications not Noticed.

E. H. B., Philadelphia.—Thanks for your article on Fox Hunting in Virginia. Be kind enough to give us your city address, as we desire to communicate with you.

STRATTON, N. Y.—Can you tell me where I can get a detailed map of Fulton and Hamilton counties, and price of each? Ans. Send to Colton & Co., 172 William street, N. Y. Price about 75c.

ALY HELSTENSTEN, Milwaukee.—Will you please tell me where you think the best place in Wisconsin can be found and oblige? Ans. "Home—where there's no place like home."

W. H. P., Nassau.—If any one wants wild rice, not parched, I can get it for them in any quantity, provided they order early in the Summer, so I can make the necessary arrangements at the Agency to procure the requisite supply.—THOMAS P. CANTWELL, Braintree, Minn.

C. A. A., New York.—A notice in a recent number of your paper alludes to a map of the United States, compiled from the coast survey and published by the Government. Please state by whom? Ans. E. Lloyd, Map Publisher, Philadelphia.

W. H. McD., Dover, Del.—Won't you please give us cuts of the new Wimbledon targets in your valuable paper, and oblige many who are interested in rifle shooting? Ans. Have tried for three weeks to procure diagrams. Will probably print them in our next.

G. W. R., Brooklyn.—Do you know where I can purchase some brown wing curlew decoys, suitable for shooting the brown wing curlew in Florida? Ans. Order through any gunsmith. Price ranges from \$12 to \$18, according to finish.

H. C. BRANES, Oeslin, Iowa.—Can a pawn, on being played to the eighth square, be substituted only for any piece previously taken, or can a player have two queens, three rooks, &c., on the board at the same time? Ans. The moment a pawn reaches the eighth square it can be changed into any piece, so that the player choosing it can have two queens on the board or three rooks and any other pieces.

A. G. P. A.—Where can I go for a two weeks' excursion from Feb. 1 and get some good shooting? How is Currituck Sound? Ans. Most too late for Currituck. The club members returned two weeks ago. You can go to Florida and back in two weeks, and have half the time for shooting. Round trip to Jacksonville from New York and return via Pennsylvania Railroad, and Chesapeake and Atlantic.

E. P. R., Brooklyn.—Is the Maynard a first-class sporting rifle, and does it stand to advantage with shot barrel, or have you heard of any person having any trouble in extracting the shells, or are there any other drawbacks to it? Ans. Gunsmiths and sportsmen speak of the Maynard Rifle as a very perfect weapon. An excellent rifle at a very low price is the Ballard, sold by Messrs. Read & Sons, Boston. Price \$12.

J. SCOTT, Gravenhurst, Muskoka, Canada.—Will you please give a description of the Wimbledon target, and how they count the points? Ans. An interesting description of the Wimbledon target, and its difference from that used at Cretaceous cannot be given without ragging, which we hope soon to place before our readers. The points are counted as follows: Bullseye, 5; centre, 4; inner, 3; outer, 2.

C. E. L., Lockport.—Will you be so kind as to inform me, through your valuable paper, how that beautiful dark blue color is produced on rifle telescopes? Is it done by tincture, or by some chemical process? Ans. The article is placed in a sheet from tin, and entirely covered with house dust, then heated slowly and afterwards oiled, or if required, it is allowed to soak in oil.

T. H. K., Cicado, Cal.—I send you the weight of a female California quail, six males and six females: Weight of males, 2 1/2 pounds; females, 21 pounds. They were averaged from seventy-one birds in good condition. Please give the weight of Eastern quail from Eastern and Western States, if there is any difference? Ans. Western quail take in lump only weighed in three instances, in our presence, 15 pounds per dozen.

SHOOTING CLUB, Denver.—Has the Supreme Court of New York State decided that the possession of game out of season, although bought before the season closed, is in violation of the law? If so, in what case or cases? Ans. We enclose to you a copy of Judge Wiley's decision in favor of the Quailers. J. H. Racy, in a suit, covering the question you refer to, has published a statement that in only one case out of seven had the prosecution failed. Quite possibly these cases may be appealed finally to the Supreme Court, but we do not understand that any such case has yet been before it.

L. C. L., Most Haven.—Would you inform me, through your most valuable paper, if there is any city in existence that has the gas lighted up by electricity, and turned off and on by the issue, and how it is constructed? Ans. The city of New York has the street lights lighted up by electricity, to a limited extent, in one of the Eastern cities (Boston, we believe), but has been found impracticable and expensive, if used on a large scale. The necessity of employing lamp cleaners and lighters would still exist, and the liability to breakage of the circuit of electricity would involve a host of disasters, such as total darkness, &c., of the entire city.

R. H. D., Canandaigua.—In the International shot gun trial of 1873, how far was the target, what was the largest and broad shot used? Ans. 1st. Forty yards; diameter of target, 80 inches. The target was composed of forty sheets of tough hardware wrapping paper, as nearly like that used at the British gun trials as could be obtained. 2d. There is no record of size or brand of shot. The charge was 1 1/2 oz. of shot and 21 to 24 grains of powder. Full report of the gun trial were published in the *Times*, *Field* and *Farm*. Our journal did not regard the trial at that time as in any sense a test of merit.

ALABAMA.—Please inform me of the best route to St. Augustine, Florida, and the expense? Ans. To reach St. Augustine from New York there are four distinct routes—all rail to Jacksonville, thence by boat to Titos (forty miles up the St. John's river daily), from thence by rail, fourteen miles, to St. Augustine; or by steamer to Charleston, Savannah, or Fernandina, and by boat or rail from thence to St. Augustine. Steamers to Charleston leave New York twice a week, and to Fernandina every week. Fare through by steamers, \$3.75; via "rail", \$40.75. By reference to an advertisement in these columns, it will be seen that the Pennsylvania Railroad issues excursion tickets to Jacksonville and return for \$50.

A WEEKLY JOURNAL,

DEVOTED TO FIELD AND AQUATIC SPORTS, PRACTICAL NATURAL HISTORY, FISH CULTURE, THE PROTECTION OF GAME, PRESERVATION OF FORESTS, AND THE INDOCTRINATION IN MEN AND WOMEN OF A HEALTHY INTEREST IN OUT-DOOR RECREATION AND STUDY.

PUBLISHED BY

Forest and Stream Publishing Company,

—AT—

17 CHATHAM STREET, (CITY HALL SQUARE) NEW YORK,
(Post Office Box 2822)
125 SOUTH THIRD STREET, PHILADELPHIA.
101 & 106 MADISON ST., CHICAGO.

Terms, Five Dollars a Year, Strictly in Advance.

A discount of twenty percent. allowed for five copies and upwards.

Advertising Rates.

In regular advertising columns, nonpareil type, 12 lines to the inch, 25 cents per line. Advertisements on outside page, 40 cents per line. Reading notices, 50 cents per line. In double column 25 per cent. extra. Where advertisements are inserted over 1 month, a discount of 10 per cent. will be made; over three months, 20 per cent; over six months, 30 per cent.

NEW YORK, THURSDAY, JANUARY 28, 1875.

To Correspondents.

All communications whatever, whether relating to business or literary correspondence, must be addressed to THE FOREST AND STREAM PUBLISHING COMPANY. Personal or private letters of course excepted. All communications intended for publication must be accompanied with real name, as a guaranty of good faith. Names will not be published if objection be made. No anonymous contributions will be regarded.

Articles relating to any topic within the scope of this paper are solicited. We cannot promise to return rejected manuscripts.

Secretaries of Clubs and Associations are urged to favor us with brief notes of their movements and transactions, as it is the aim of this paper to become a medium of useful and reliable information between gentlemen sportsmen from one end of the country to the other; and they will find our columns a desirable medium for advertising announcements. The Publishers of FOREST AND STREAM aim to merit and secure the patronage and countenance of that portion of the community whose refined intelligence enables them to properly appreciate and enjoy all that is beautiful in Nature. It will wander to no depraved tastes, nor pervert the legitimate purposes of land and water to those base uses which always tend to make them unpopular with the virtuous and good. No advertisement or business notice of an immoral character will be received on any terms; and nothing will be admitted to any department of the paper that may not be read with propriety in the home circle.

We cannot be responsible for the dereliction of the mail service, if money remitted to us is lost.

Advertisements should be sent in by Saturday of each week, if possible.

CHARLES HALLOCK, Managing Editor.

WILLIAM C. HARRIS, Business Manager.

FIELD CLUBS.

THE number of societies in England and France that devote a large share of attention to making collections and notes of the flora and fauna of their immediate region seems very large to us, on this side of the water, to whom such organizations are unknown; and the fact that they do not exist is somewhat of a disappointment, even if they would accomplish only a small fraction of the work done by the clubs abroad. The latter have furnished some of the most interesting notes on the habits and peculiarities of plants and animals to the more pretentious natural history societies, from the fact that they have had an opportunity of seeing the objects they study under varied conditions. Besides their contributions to science, the members have enriched their own minds, and given themselves a source of pure pleasure unlimited in capacity.

In this country, where many peculiarities of our flora and fauna are unknown, owing to the nascent condition of our scientific associations, and consequently their limited time for study and examination, such societies would do much good by their investigations and collections. They could, for instance, make notes on all the remarkable trees, shrubs and flowers in their neighborhood, the migration of birds, the hibernation of quadrupeds, and their mode of procuring food in severe Winters. These would prove a valuable contribution to our scientific lore, and be read with much interest by all classes of persons. So far, we know only of one club of this class in the country, and that is the New England Society, of Orange, New Jersey. That its members have not been idle is evident from a neat publication called the "Rabbit Portfolio," which they have recently issued. This contains a description and a history of all the notable trees in their neighborhood, and is handsomely illustrated with photo-engravings. The first number contains the "Valley oak" (*Quercus albus*), the "Hill-ory elm" (*Ulmus Americana*), and the buttonwood (*Platanus Occidentalis*).

The pretty volumes are named in honor of Dr. Babbit, who was the first to plant shade trees in Orange and its vicinity. If we had more societies of this sort they would prove most valuable auxiliaries to the scientific corps now so actively engaged on this continent.

CLOSE TIME FOR DUCKS.

The New York Association for the Protection of Game, at their meeting January 18th, proposed some amendments to the Game Laws of New York, which do not quite meet the requirements of the case.

It is a well known fact among the sportsmen and baymen at the south side of Long Island, that ever since the duck law has been changed from October 20th, as it formerly existed, to September 1st, the shooting has been attended with exceedingly poor success.

As the law now stands, the gunners commence a brisk fusillade September 1st as the very first flock endeavors to alight in the bay; the consequence is, that the ducks are driven away, while if they were allowed to alight and remain undisturbed on the feeding grounds until about the 20th of October, the shooting would undoubtedly be good until the freezing of the bay drove the birds south. Most of the birds driven from Long Island during the Fall of 1873 took refuge in Barnegat Bay and other bays further south. Last Fall the ducks were very scarce all along the coast from Long Island to Cape May. These facts can be corroborated by gentlemen who have spent several weeks every year for many years gunning on the coast of Long Island and New Jersey.

We are not prepared to say why the ducks were so few last Fall, unless the warm weather kept them back; but when they did arrive, as the weather grew colder, it was evident to anyone that the cause of their hurried departure from our shores was the result of the vigorous fire opened upon them before they had a chance to "open a trade," as it is called, between the local feeding grounds. The law, we understand, was changed to September 1st in New York, to allow a chance to those who wish to shoot teal, which are very scarce at any time. All the gunners with whom we have conversed on the subject, agree that the 20th of October is the very earliest time that the Fall duck shooting ought to commence on Long Island.

If laws are not speedily enacted to suit the habits of the game and then vigorously enforced, the time is not far distant when we may as well "put our decoys out" on the Central Park skating pond as in the bays of Long Island and New Jersey.

AMERICAN RIFLES AT WIMBLEDON.

THE impression created on the Irish riflemen during their visit here may be readily inferred from the interest they have taken in the Amateur Club. They have already made preparations to receive their American rivals and friends at Wimbledon during the great shooting festival; but more than that, knowing that under the Wimbledon rules our riflemen would not be allowed to compete, as they use a rifle of 41 calibre instead of 45, as the former demand, they opened a correspondence with Capt. Mildmay, Secretary of the Wimbledon Association, and explained this fact to him, and he was kind enough to have the rule rescinded, so that our "team" can now show their power with the American breech loader. An important fact for our men to consider, were it not already understood, is that breech loaders will not be allowed to be loaded from the muzzle, it being considered a violation of the principles on which they are made. This, however, is a matter of small moment, as it was only done in an exceptional case here. The action of the Irish team in preparing the way for their American rivals and friends may be deduced from the letter of Mr. Rigby, which we append, as well as the response of Capt. Mildmay to his note of inquiry. Our riflemen are certainly under a marked obligation to Mr. Rigby for the personal interest and effort he has taken in the matter:—

Dublin, December 30th, 1874.

During my stay in New York I became aware that almost all the American rifles used at Creedmoor were of a calibre smaller than the limit prescribed by the rules of the National Rifle Association of Great Britain, and that consequently American riflemen visiting England would be unable to use their own rifles in the competitions at Wimbledon. Immediately on my return, I wrote to the Council at London, representing this fact, and suggesting that the rule limiting the calibre might be altered. I took occasion at the same time to put another question, viz: whether in a competition open only to any breech loading rifle it would be permitted to a competitor to load his rifle in the manner described by you, viz: "in-erting an empty cartridge case, closing the breech, and then loading through the muzzle." The limitation of the minimum calibre .450 in "any rifle" will no longer be enforced.

NATIONAL RIFLE ASSOCIATION.
No. 12 PAUL MALL, EAST, DORSET, 9th, 1874. {

MY DEAR SIR:—In reply to your letter of the 18th ult., which I submitted to the Council of the 4th inst. I am directed to state—1st. That it will not be permitted to a competitor to load his rifle in the manner described by you, viz: "in-erting an empty cartridge case, closing the breech, and then loading through the muzzle." 2d. The limitation of the minimum calibre .450 in "any rifle" will no longer be enforced.

Believe me, yours truly,

E. ST. JOHN MILDWAY, Sec'y N. R. A.

I think the Council of the National Rifle Association of Great Britain have shown good judgment in their decisions on both points, and am, sir, yours faithfully,

JOHN RIGBY.

FOREST AND STREAM has reached Russia, on its way to the Antipodes, our first subscription from that country having been forwarded to us last week through the Publishing House of G. P. Putnam's Sons.

—Seven more surgeons have located near the Boston Common since the coasting carnival began. If the sledding continues, they anticipate a good business.

GOOD REGATTA RULES.

THE decisions of the recent Intercollegiate Rowing Convention will do away with nearly all the abuse usually incidental to races between the university boats, so that the contests will in future be devoid of the acrimony and ill feeling engendered by collisions, unfair decisions, and the other mishaps liable to occur at any time under the old rules. One very important change is placing the entire race, from the time of the start, in charge of the referee, and another is that every boat leaves its water at its own pier, thus preventing all danger of washing. The buoying of the course is a considerable idea, as that will check fouling, which seems to have become unfortunately common of late, and will do much to keep up that moral which induces every club present to struggle hard for supremacy, as a victory then, where all perfections are ruled out, will depend entirely on skill, muscle, and perseverance.

A definition of what constitutes a foul is a matter that the rules should be more specific about, for it is not really necessary that one boat should touch another to consider it a foul, for one may cross the line of another, or force it from its course, and yet it is a foul in reality as much as if both collided. The following conditions, if accepted, might, however, check any such action as this:—

If in any race in which more than two boats start, a foul takes place, and the boat adjudged by the umpire to have been fouled reaches the winning point ahead of all other crews, the race shall be decided as the boats come in, disqualifying the boat that committed the foul; but in case the boat fouled does not come in ahead of all the other crews, the race shall be rowed over again between the boat decided to have been fouled and all the other boats which came in ahead of the fouled boat, or in case the referee is unable to decide which boat has committed the foul, the race shall be rowed over by all the boats; unless, in either of the last two cases, the referee shall decide that the boat which came in first had a sufficient lead at the foul to warrant the race being assigned to it.

The fact, however, that boats have been unusually prone to collision of late, may prevent a recurrence of such acts, as the crew guilty of careless conduct would leave themselves liable to severe criticism. The idea seems to prevail that such action is either premeditated or the result of want of skill or power, and therefore an indication of weakness; so we may conclude that the coming college regatta will be the best contested ever seen in our waters, and that nothing that wisdom can prevent will arise to mar its harmony. The only obstacle apparent at present is the absence of coxswains, and if the regatta committee understand the importance of their position they will permit these to be used, or else select a course so broad that there cannot be even the most remote excuse for fouling. The latter is somewhat difficult to do, so the former seems the readiest mode at command to escape from the dilemma.

THE ADIRONDACK SURVEY.

THE surveys of the Adirondacks have revealed beauties which the region was not supposed to possess, and have proved that the mountains which dot it so thickly have a much higher altitude and more rugged grandeur than their most warm admirers ever imagined. In speaking of the result of the expedition authorized by the Legislature to survey it, Mr. Venplanck Colvin says in his admirable Report:—

"The Adirondack wilderness may be considered the wonder and the glory of New York. It is a vast natural park, an immense and silent forest, curiously and beautifully broken by the gleaming waters of a myriad of lakes, between which rugged mountain ranges rise as a sea of granite billows. At the northeast the mountains culminate within an area of some hundreds of square miles; and here savage treeless peaks, towering above the timber line, crowd one another, and, standing gloomily shoulder to shoulder rear their rocky, craggy and frosty clouds. The wild winds may be felt, rushing from the ledges on the mountain sides over unbroken woodlands stretching beyond the reach of sight—beyond the blue hazy ridges at the horizon. The voyager by canoe, beholds lakes in which these mountains and wild forests are reflected like inverted reality; now wondrous in their dark grandeur and solemnity; now glorious in resplendent Autumn color of pearly beauty. Here—thrilling southern echoes the melody of the breeze, the rustle of the leaves, the lowing of deep-mouthed bays, as he pursues the swift career of deer; the quavering note of the loon on the lake; the mournful hoot of the owl at night; with rarer forest voices have also to the lover of nature their peculiar charm, and form the wild language of this forest."

"It is this region of lakes and mountains—whose mountain core is well shown by illustration 'the heart of the Adirondacks'—that our citizens desire to reserve forever as a public forest park, not only as a resort of rest for themselves and for posterity, but for weighty reasons of political economy. For reservoirs of water for the canals and rivers; for the amelioration of Spring floods, by the preservation of the forests sheltering the deep Winter snows; for the salvation of the timber—our only cheap source of lumber supply should the Canadian and Western markets be ruined by fires, or otherwise lost to us—its preservation as a State forest is urgently demanded."

"In the verification of my previous discovery of the loftiest pond source of the Hudson, we obtain the definite and permanent settlement of an interesting question, and hand over to Geography the course of the mighty river from the lone lakelet spring, downward by steps of foam, to its broad, haughty and historic tide. From the loftiest lakelet of New York the water descends, gathering volume at every brook, till in full breadth it flows before the warrens and piers of the metropolis, floating the richly burdened ships of all the nations."

"To the number of those chilly peaks amid which our principal rivers take their rise, I have added by measurement a dozen or more over four thousand feet in height, which were before either nameless or only vaguely known by the names given them by hunters and trappers. The names and measurements will be found in the table of altitudes."

It is well to note that the final hypsometrical computations fully affirm my discovery that in Mount Haystack

THE "BIG HUNT."

Letters of protest and approval still continue to come in respecting the coming "Big Hunt," as it is called. We print some "specimen bricks" to-day. Several correspondents will pardon us for not printing their communications, because they raise no new points not already covered by previous letters.—

EDITOR FOREST AND STREAM:—

I wish to call the attention of sportsmen to several points in the letter of Col. McCarty, which appeared in your issue of January 14th, and pass a few friendly strictures upon your introductory remarks.

You must intend to satirize the expedition when you say "we shall be able not only to discover new geographical features, new minerals, new species of flora and fauna, but possibly new races of men, and ruins of ancient villages and cities." Mac Twain never wrote anything more humorous. Nothing is more absurd than to call this hunting raid of the Colonel and his party, scientific. I cannot believe that you wrote the paragraph in sober earnest.

Does the Colonel mean to put America on a level with Africa and India? Hunting expeditions have left England for these savage countries, and why should not one come to America, is his inevitable logic. He, in common with other Englishmen, no doubt thinks that we have no science, no civilization, and no rights. And "come," say you, "there are new races of men to be discovered, new species of birds and animals." This is rich. It really makes one laugh. We have no naturalists, no sportsmen. True, our Government has sent out exploring expeditions, headed by scientists, men, known and respected the world over, but what of these, when compared with an English hunting and scientific expedition, headed by one McCarty.

Come, say our himan; leave not one alive; "they are a nuisance," for the Colonel says so, and he ought to know, for he is not an Englishman; and what is there that an Englishman does not know? Hear his philosophy.—"If we cannot find game, we will go on and on, and on we will go, rapine and murder, and the Government will save millions of dollars and the precious lives of many of its best citizens." Profound! If this man's impudence does not need checking, then I am at fault in writing this letter.

Mr. McCarty, the sportsmen of America will be glad to welcome you to their "preserves," if you mean to be a sportsman and a sportsman, but will not if you come at the head of an organized bandit to slaughter if you can. We emphatically protest against you and your party coming to our game regions without ever saying "by your leave." For one I am not willing to give up our game to foreign intruders. Your proposition is the most dishonorable imaginable. Were you to come with half a dozen good fellows we would not complain, but when you propose to fit out a hunting fleet and sail into our port, landing and scattering your three hundred in our forests and upon our streams, killing our game without regard to use or value, we will not say welcome. We are democratic, but not enough to permit any nation to come in armies, burn our forests, take our animals, fishes, and birds captive. Reflect that it is *our* game which you propose to kill, and it is *our* interest to protect the objects of the chase. You and your party, in your flying trip through our best game regions, having no future care or interest in preserving the game, may, if so disposed, wantonly destroy it. Should you persist in carrying out your programme, as published, we, the sportsmen of America, may be compelled to assemble and denounce your proposed invasion of our hunting grounds, and destruction of our property. The sportsmen of England are protected from such depredations by law, and most strictly do they enforce that law. Now, sir, we have but one remedy in view of your barefaced proposition, and that is to ask Congress to protect us in our rights. The game of America is a part of her wealth, and belongs to her people, while the game of England belongs to the aristocracy of that country. Americans could be arrested for stealing should they attempt such a raid, and you, gentlemen, you propose to carry out in the United States. Sir, as I am writing a plain letter, you are deliberately organizing a thieving party. Should you come as you propose, you will not be recognized by American sportsmen. I have consulted several of our sportsmen, and they all denounce in bitter terms your project. It is to be hoped that you may have sufficient good sense to see the master in his preface, and that you will do me the honor to put your theory into practice, then there will be resolutions of censure and condemnation at every State meeting, and at our National Sportsman's Convention, to be held at Cleveland, Ohio, in June next. We are in earnest. This is written with no ill will to you, or the men of leisure and wealth who compose your party, but in self-defence of our sportsmen and game, and in the interest of humanity. A. B. LAMBERTON.

Mr. Lamberton argues from false premises in the supposition that Col. McCarty is an Englishman, he being native and to the manner born, and his ancestors for five generations before him. We don't see how an act of Congress can be made to prohibit foreigners from hunting on or passing through our territory unless it subverts the first principles of the Republic.

71 BROADWAY, N. Y., January 21, 1875.

EDITOR FOREST AND STREAM:—

I see in your valuable paper that Col. McCarty has answered a number of your correspondents very fully. I think Mr. Mead and others write in a very silly strain. They had better devote their time to putting an end to daily poaching going on under our noses. I am in the habit of visiting the Adirondack region all summer, and I have never yet seen the spot where poaching was not a daily practice of the countrymen, or most of the visitors. There is plenty of room for their services nearer home, without going into things they do not understand.

Yours truly,

WAKEMAN HOLBERTON.

REVOLUTIONARY.—The citizens of Lexington, Massachusetts, have resolved to celebrate the Hundredth Anniversary of the "Battle of Lexington" on the 19th of April next. No locality can be more appropriate for commemorating the opening scenes of the Revolution, than the very spot where the first blood was shed. It is proposed to arrange for the celebration of the day regardless of the broad historic interest which pertains to the event. The citizens of the country generally are invited to join in the observances. The prominent features of the day will consist of an oration, the unveiling of the statues of John Hancock and Samuel Adams, who had sought refuge from British proscription in Lexington, and were under its protection on that day—and a public dinner. It is expected that the occasion will be honored by the presence of the Executive of the United States, the State of Massachusetts, representatives of the different departments of the National and State governments, literary, and other organizations, and distinguished individuals of the Republic, whose words of eloquence and wisdom will add interest to the occasion.

—A series of international pigeon matches are to come off at Monaco, Italy, this week. Messrs. James Gordon Bennett, G. Lorillard and C. Livingstone are on the Committee of Arrangements.

Shot Gun and Rifle.

GAME IN SEASON FOR JANUARY.

Hares, brown and gray.

Wild duck, geese, brant, &c.

FOR FLORIDA.

Deer, Wild Turkey, Woodcock, Quail, Snipe, Ducks and Wild Fowl.

Under the head of "Game, and Fish in Season," we can only specify in several species, because the laws of States vary so much that were we to attempt to particularize we could do less than publish those entire sections that relate to the kinds of game in season. This would require a great amount of our space. In designating game we are guided by the laws of nature, upon which all legislation is founded, and our readers would do well to provide themselves with the laws of their respective States, and not reference. Otherwise, our attempts to assist them will only create confusion.

GAME IN MARKET.—Venison sells from 18 to 20 cent per pound; ruffed grouse, \$1 per brace; prairie chickens 75 cents; quail, \$2 to \$2.50 per dozen; canvas backs, \$2 to \$2.50 per brace; red heads, \$1.50 to \$1.75; mallards, \$1.50; black ducks, \$1.25; wildgeons, \$1; hares, 75 cents; rabbits, same price; wild turkey, 30 cents per pound; and wild geese, \$3 per brace.

—We repeat the following notice for the information and guidance of marketmen and others:

Under the provisions of the Game Law of the State of New York, (chapter 584 of the laws of 1874) it is unlawful for any person to sell, expose for sale, transport, or have in his or her possession in this State, after the same has been killed, any moose, wild deer, or fresh venison, save only, during the months of September, October, November, December and January, under a penalty of fifty dollars for each offence.

The New York Association for the protection of Game gives notice that it will prosecute all dealers in game, and other persons who violate the foregoing provisions, after the first instant.

THOMAS N. CUTHBERT, Secretary.

No. 52 Wall street.

January 18, 1875.

The sale of trout is not permitted until March 15th. The sale of grouse, quail, &c., is forbidden after March 1st.

—The snow in the Adirondack woods is two feet deep, and the ice on the lakes a foot and a half thick.

—The lumber for the new hotel at Cedar Keys, Florida, has been ordered, and the building will be pushed forward at once.

—The Kent County Sportsmen's Club has just been organized in Michigan with twenty-four members and the following officers:—

President, E. S. Holmes; Vice President, Martin Borthum; Secretary, A. J. Holt; Treasurer, A. C. Horton; Board of Directors, L. H. Haswell, George S. Beards, A. B. Turner, J. S. Stewart, Henry Wildicomb, its headquarters are at Grand Rapids. Preservation of game and fish will receive its special attention.

—The sportsmen of York, Pa., last week organized a club for the protection of game, with the following officers for the year 1875:—President, H. L. Fisher, Esq.; Vice Presidents, A. H. Nes, Geo. Karg, A. H. Glaz, P. L. Wickes, Esq., John L. Blackford, Esq.; Secretary, Edward Stuck; Cor. Sec'y, Geo. A. Hecker; Treasurer, Alfred Gartman. Adjourned to meet at the call of the President.

—The sportsmen of Grand Rapids, Michigan, have organized a club called the Kent County Sportsmen's Club, and have announced their readiness to second a call from other clubs, to start a State Sportsmen's Association, to fully represent the interest of Michigan in the session of the National Sportsmen's Association at Cleveland in June next. Keep the ball in motion. The work goes bravely on.

Yours,

B.

—The Hannibal, Mo., Shooting Club has elected the following officers for the coming year:—P. A. Hickman, President; G. W. Hewitt, Vice President; W. S. Hallack, Corresponding and Recording Secretary; J. K. Hayward, Treasurer; R. Buchanan, W. R. Kelley, J. Van Brown, Executive Committee.

THE INTERNATIONAL RIFLE MATCH.—A meeting of the National Rifle Association and the Amateur Rifle Club was held at 70, Broadway, on Saturday afternoon to make the requisite preparations for the forthcoming international rifle match, which is to take place at Dublin in June next. Colonel Wingate was made Chairman and Mr. Bruce Secretary. After stating the objects of the meeting the Chairman read a letter from Major Leech, of the Irish team, asking that the American team be his personal guests during the match. This it was resolved to decline, with suitable expressions, as imposing too heavy a burden on the Major. A committee of Finance was appointed consisting of General Woodward, Colonel Gildersleeve, Mr. Judd and Mr. Alvord, to report a plan for raising the necessary funds to pay the expenses of the team. The Chairman, General McMahon, Captain Fulton and Mr. Collins were appointed a committee to devise the selection of a team, and the joint committee adjourned to meet next Saturday afternoon at the same place.

RIFLE RANGE IN MASSACHUSETTS.—Adjutant General Cunningham in his annual report to the Legislature recommends the building of a rifle range at the State Camp Ground at Framingham, Mass. He says:—

"The subject of a rifle range for the militia is receiving considerable attention throughout the State. It is found, upon examination, that the State Camp Grounds afford the opportunity of procuring thereon a rifle range 1,000 yards long, and it could be made undoubtedly the best range in the country.

—Lieut. Macnaman, of Coloursburg has received the gold medal awarded by His Excellency Lord Dufferin to the Canadian marksman making the highest score at Wimbledon last summer. The marksman was very handsome, on one side of which is, near the outer edge, in letters, "The Dufferin Medal, 1874," and in the centre a beautiful executed figure of a rifleman, in officer's tunic, kneeling in the act of shooting. On the obverse is a finely executed laurel wreath enclosing the following:—"For the highest score made at Wimbledon." Lieut. Macnaman was lucky enough to win no less than four prizes, which he brought home with him from Wimbledon, and this is the fifth secured by him from the Wimbledon match of 1874.

we have another mountain of 5,000 feet altitude. It may not be uninteresting, also, to remark that the difference between the altitudes of Mt. Marcy, and Mt. Washington, of the White Mountains of New Hampshire, is found to be quite 800 feet. Mt. Marcy, Mr. McIntyre and Mt. Haystack, are to be remembered as the three royal summits of the State. Mt. Marcy, though lying upon the very limit of 5,000 feet I have found to be twenty-five feet lower than Mt. Haystack; yet it should be mentioned that a computation based upon a single vertical angle, from Mt. Marcy would show Skylight to be but 9 15-100 feet below the limit of 5,000 feet. This will be finally settled by reciprocal vertical angles to be hereafter measured.

"The new passes and routes for trails across the mountains which we have explored will be found to greatly facilitate travel, especially the route by Lake Tear, the summit route, at the south of Mt. Marcy, which renders the climbing of the peak unnecessary to those merely desirous of crossing the range; while upon the shore of the lakelet spring, a hut can be constructed for the shelter of parties, till clouds clearing away from the summit of Marcy announce a favorable day for the ascent. The trail by the new Canadian pass by which the water of Arnold's Lake may be avoided, will be found of equal value, while the new route which I have discovered to the summit of Mt. Seward, from the north by Ampersand Pond, makes that grand peak easily accessible, without the labor of climbing over all the minor summits at the south. Our trail from Bartlett mountain to the summit of Mt. Haystack will be found useful to those desirous of visiting that remarkable summit."

"The hydraulic power of the region, practically its most important topographical feature, has been studied with the results heretofore detailed. The absolute necessity of the reservation of these waters for the Champlain ship canal has, I trust, been made apparent; it was first brought before the public in my previous reports. The statistics of areas of water sheds; of flow per minute in cubic feet of these streams of the wilderness are the first ever made, and are recommended to legislative consideration. It is just to remark, that the practicability of connecting the higher waters of the Hudson and St. Lawrence was first suggested by Prof. E. Emmons, but only for the purpose of obtaining better canoe or bateau navigation through the wilderness."

Of the Zoology of the region he says:—

"As a matter of zoological and general interest, I may mention that in a few of the most remote portions of the wilderness we have met with indications of the moose, which, to some of the guides, seemed unmistakable. This gigantic deer is, however, almost extinct in the Adirondacks, and I would suggest, that if he be made, in future, unlawful to kill or destroy the deer at any season. Beaver, also, are still to be found in one or two localities, and should be similarly protected by law. The bear, panther and wolf, etc., are still sufficiently abundant, and afford support to some trappers, who make them almost their sole object and means of livelihood. The common deer are extremely plentiful in some sections, and almost wanting in others—their absence in localities being attributable to the presence of the moose and the deer, which, in turn, sends those (which are not driven to water and killed) to less disturbed feeding grounds."

"Almost all of the new lakes mapped, abound in immense speckled or brook trout—some of them of wonderful size and weight, reaching three and four pounds—true *salmo fontinalis*. As a matter of special interest, I may mention our discovery of huge trout in one of the brook beds of Lake Umbagog, in the Adirondack Park, which is itself. This is probably the highest point at which trout are found within the State, Lake Colden being over 2,700 feet above the sea.

In reference to the Adirondack Park he says:—

"In regard specifically to the proposed park or State forest reserve and the area or portion available to be taken for that purpose, a brief statement will be sufficient. I would recommend that at present only the high mountain region—the heart of the Adirondacks—be taken. This section includes Mt. Marcy and all the great parks of 4,000 and 5,000 feet altitude, and is indisputably valueless for agriculture. The region which I thus suggest as the nucleus of the park is bounded on the east by the Schroon Valley and Pass, from which it extends to the north by the settlement of Keene or the Keene and North Elba Road; on the north-west by the Saranac Lakes; on the west by the Raquette River and Long Lake; and on the south by what is known as the Carthage Road, extending from Long Lake to Root's. The area thus separated would afford the State the control of the Catlin Chain and outlet of Long Lake—the key to the western waters which have so often recommended for feeders of the Champlain Canal.

The area of the section thus recommended is not far from 600 square miles or 384,000 acres, and with but trifling exceptions consists of abandoned lands, unremunerative and almost valueless—the only lumbering or timber cutting being along a few of the low-land or lake valleys.

It forms but a small portion of this northern forest region, it is acknowledged to be cold, sterile, and useless for farming; it embraces the sources of the Hudson River and lakes already used as reservoirs by lumbermen; and besides contains the highest mountains of New York—a region of wonderful beauty and picturesqueness which, under control as a park, and preserved from ruthless desolation by fire, can be made as profitable to this State by travel and traffic as Mt. Washington and the White Mountains are to New Hampshire."

SEVERE WEATHER IN ENGLAND.—A letter from Jackson Billbanks, Esq., Whitefield, Eng., says:—

"We have not had such storms in England &c. Great Britain, for forty or fifty years. The frost and snow are terrible. A great want of cattle food—such as maize, Canadian peas, &c., (as our hay and corn crop was only about one quarter of average) and yet the arrivals from America of such stuff are very scarce. Your American farmers would make a fortune out of it, if they had a single penny over, but I suspect your shipping is not flourishing, and your governors content with living from hand to mouth."

—In Kansas the coal deposits are found near the surface. When the owner of a deposit wishes to open a coal yard, he sticks up a sign near the spot, "Coal for Sale," and the purchaser digs for himself and carts away what he wants.

much like to hear this question discussed, but I am in favor of a general law on game birds and make the close time for New England from January to October. What do you say?
SANZ.

PROTECTING RABBITS.

STATEN ISLAND SHOOTING ASSOCIATION,
FORT RICHMOND, January 30, 1875.

EDITOR FOREST AND STREAM:

I send you one of our posters, which we have just printed, and which speaks for itself. You will see that rabbits are mentioned. This is a county law which we have passed in 1873, and several parties have been brought up and fined for violating it. The fine is a heavy one, and we shall demand the whole amount in all cases, as we intend stopping the destruction of these little animals, that has been practiced in former years in our country. If any person has any doubt about our enforcing this law, they can let it be brought to our notice, and we will show them how earnest we are in the matter. We only ask to have them protected during the close season, after which time we are happy to have any one join us in the sport. Let other clubs do likewise. Respectfully Yours,
NORTHERN.

BEEF, MUTTON, COOTS AND COONS.

BROMFIELD HOUSE, BOSTON, January 9, 1875.

EDITOR FOREST AND STREAM:

The following very interesting specimens were lately shipped by G. E. Frankland, Toronto, Canada, to L. Bolkan & Co., Boston, where their remarkable qualities attracted much attention: Six muttons, five quarters beef, one veal, one goat, four coons and one bear. The two heaviest quarters beef weighed respectively 281 lbs. and 474 lbs., and by our market men are said to be at and handsome as ever passed the looks of Faneuil Hall Market. The heaviest mutton turned the scales at 214 lbs. The condition of the coons and bear gave evidence of good living in the Muskoka region, from which they came. The entire lot were skillfully dressed, and reflected credit on the ability and enterprise of our provincial neighbors.

By the way, dear FOREST AND STREAM, I should like to say to "R. L. K." and "S. K. Jr." and others, I have been much interested in their discussion on coat shooting; in fact the discussion is more interesting to me than the real sport! I am an old coat shooter. I might say a retired coat shooter—I always retire when the sea is rough. They both are practically correct, as far as they have carried their stations are, but they don't tell it all. The boys here want me to write and tell how I do it. They say I got sea sick and gave a man two dollars to row me ashore. There must be some mistake about that; but, if anybody wishes my opinion of coat shooting, they must address me confidentially and enclose stamp. Yours, &c.,
M.

PETERBOROUGH, January 21, 1875.

EDITOR FOREST AND STREAM:

We are about forming a sporting and game protective club in this town. Our inaugural meeting takes place on Wednesday evening next, (7th) a report of which I will give you for publication in FOREST AND STREAM. Your excellent paper is a most valuable and estimable amount of good, not only in the United States, but in Canada, wherever it is read. I think we shall be able to say that we owe the existence of our club to FOREST AND STREAM, and I have no doubt many other sporting clubs can trace the origin of their existence to the same source. Claiming your indulgence in trespassing on your time, I am, very respectfully,
C. A. Post.

CHARGES FOR SHOT GUNS.

MONTREAL, January 20, 1875.

EDITOR FOREST AND STREAM:

I am often annoyed at parties asking you the best charges for their guns, and rarely, if ever, stating the weight of their pieces. I will give you a simple rule which is the result of my own experience, and one that I think has not yet been in print. The charge of shot for any gun not exceeding 10, 16, 20, or 30 bore, to be one ounce. If not over No. 5, one ounce and a quarter. If over No. 5, one ounce and a half. The number of pellets in an ounce of shot decrease to rapidly from No. 5 upwards, that the extra quarter is necessary to make a small pattern. Charge of powder to be half a drachm for every pound weight of gun, which would give 3 drachms for a six and a half pound gun, and 5 drachms for a ten pounder. The charge I have used for years is four drachms for a 20 Corn Street, Bristol, and four drachms and one ounce of the best guns that could be made to order in England. I had it made by George Gibbs, of 20 Corn Street, Bristol, and though it has had five seasons' of hard shooting, has not a spot of rust inside it. Of course the breeching has long since left the outside of the barrels. With 4 drachms powder and 1 oz. of No. 2 shot, a duck or a goose has a poor chance of escape, when held straight. The length of barrel does not seem of much consequence, as there is no perceptible difference between my 30 inch gun and my 26 inch, both by same make, same gauge, and each exactly eight pounds weight. It is a mistake to overload a gun, as, so soon as a gun begins to recoil unpleasantly, it is too good to be steady shooting. I am a tolerably strong man, and for many years accustomed to march shooting at long distances with the Melford rifle, and thoroughly accustomed to heavy recoil, but never could stand more than one-half a drachm to the pound weight of the gun. If the above scale of charges will be tried by some of your readers, I will guarantee that they will find them extremely effective. I am, yours truly,
ROYAL.

CONICAL BASS SHELLS.

Boston, January 19, 1875.

EDITOR FOREST AND STREAM:

It has just occurred to me, in connection with your notice of the new conical bass shell, that a long time ago—several years, I think, the subject being at that time the topic of conversation amongst several sportsmen—it was stated by one of them, that a shell of this description had been made and tried with a measurable degree of success by that well known and skillful mechanic, Mr. P. Mullin, of New York. I think it was stated that Mr. Mullin found a large increase in the penetration of the shot, and that the shells had never been brought out, but possibly often queried why the shell has never been brought out, but possibly Mr. Mullin can be induced to explain that for himself, as I believe he still works and prospers in your city, as he well deserves to.

UNDER GUP.

TWO FLATTERING TESTIMONIALS.—We take the liberty of publishing the following extracts from business letters sent to this office:

WHITNEYVILLE ARMY, Whitneyville, Ct.,
January 30, 1875.

EDITOR FOREST AND STREAM:

We have subscribed to and read with great interest your paper during the past year, and expect to derive from its further perusal a great deal of useful information which will enable us to make still further improvements in our sporting rifles.

The Whitney Arms Company not only use the very best materials in their manufacture, but take great pains that no guns shall leave the Armory that are not perfect.

59 ST. JAMES STREET, LONDON, S. W.
DECEMBER 20th, 1874.

EDITOR FOREST AND STREAM:

We should like to have an advertisement run for another year. I am glad to learn, from the many inquiries that I receive, that the paper has such a widespread circulation.
J. D. DODD, JR.
Gunmaker by Special Warrants to their R. H. H. the Prince of Wales and Duke of Edinburgh.

Sea and River Fishing.

FISH IN SEASON IN JANUARY.

SOUTHERN WATERS.
Pompano.
Snapper.
Grouper.
Rockfish.
Trout (black bass).
Bass (two species).
Striped.
Kingfish.
Rock Bass.

Shad.
Tilapia.
Sea Bass.

FISH IN MARKET.—Fish in general is rather scarce owing to the blocking of the rivers and harbors with ice. Smelts are coming in from Maine and Nova Scotia. Striped bass, caught through the ice and weighing about fifteen pounds, sell readily at twenty-five cents per pound; halibut is very rare and not much required, as it brings thirty cents per pound; Cod brings ten cents per pound; fresh mackerel twenty cents; Spanish mackerel forty cents; salmon trout twenty-five cents; bluefish fifty cents; salmon forty-five cents; lobsters twelve cents; whitefish twenty cents; scallops \$2 per gallon.

Considerable sport is now obtained in Eastern Massachusetts fishing for smelts through the ice with hook and line. At Milton, Weymouth, Ipswich, Newburyport, and other places large numbers are caught, and of good size, but are full of spawn. A lot recently caught at Milton weighed two pounds to the dozen. Some have been shown in Boston that weighed a half pound each, a size that shows the beneficence of the new law. These fish will bite as fast as the line can be lowered. The close season begins March 15th.

A party of gentlemen spent a couple days, week before last at the Senter House, Centre Harbor, N. H., fishing for pickerel through the ice in that part of Lake Winnepesaukee called the Basin. They captured two hundred and twenty-five pickerel, none very large, their weight varying from one to two and three-quarter pounds. The sport was heightened by the offer of a silver medal for the largest fish, which was captured by Mr. Shapleigh of Boston, and leather medal for the smallest, taken by Dr. Young of Dover, N. H.

The preparation of fish for market has attracted much attention of late from dealers in the piscatorial pabulum, and they have made so many improvements in its preservation that all the old modes have been relinquished. We see no longer the masses of oily codfish suspended from the smoke house in process of curing, as that is now deemed a piece of unnecessary labor and a means of preservation apt to injure the flavor of the finny tribes. In Gloucester, Massachusetts, according to the *Advertiser*, dealers now strip the best species of codfish of the skin and bones and then pack it in boxes. This leaves the clear article all ready for cooking, without a particle of waste. The experiment has proved very successful, and the demand for this prepared codfish, as it is called, is increasing each month. A dealer says that it is his opinion that in a few years this will constitute the principle form in which dried fish will be sold. The saving of freight, and the labor of trucking and handling the refuse matter, would form a large item in the course of a year. Beside this, the uniform quality of the fish put up in this manner commends itself at once, both to the purchaser and consumer, and are weighty arguments in its favor. The fish thus prepared looks very nice and inviting, as a visit to any of the establishments will at once prove convincing. Then, again, the labor which the preparing and boxing furnishes our people, is one worthy of consideration, and bids fair of greatly increasing in the years to come. As an illustration of the demand for prepared codfish, it may be stated that one firm, in a single month, put up and sold eleven hundred quintals, amounting when ready for market to ninety-four thousand pounds. The amount paid out for the labor of preparing it was \$470, an item which would have been lost to Gloucester if the fish had been sold according to the old method.

The following is the text of an act which is now being passed through the Legislature of this State. It is of the utmost importance, and we trust will meet with no opposition, but pass through smoothly and become a law:—

The people of the State of New York, represented in Senate and Assembly, do enact as follows:—

SECTION 1.—No person shall set a pound net, or arrange a ground fixture for catching fish in any part of the Great South Bay, or its tributaries or bays, bays, or waters connected therewith, nor in any of the estuaries or rivers and kills emptying into the Upper or Lower Bay of New York, or in any of the bays and rivers connected with Long Island Sound, nor take any fish by any such device.

Any person offending against the provisions of this section shall be liable to a penalty of \$25 to \$500 for each offence, and imprisonment of from one to thirty days, and the net so used shall be adjudged to be destroyed.

Any person shall be authorized to remove and destroy any such nets or fixtures connected therewith, and shall not be liable in any action or proceeding for so doing.

All monies paid as fines under this section shall be divided, the one half to the informer, and the other half to the school fund of the town where the offence was committed.

The Fishermen's Co-operative Association of the east end of Long Island at their annual meeting, held last week at East Marion, elected the following named officers for the current year:—President, W. H. Tullith; Vice Presidents, George M. Vail, Charles H. Brown and J. A. Clark; Secretary and Treasurer, Daniel C. Brown; Collector, H. H. Tullith; Executive Committee, D. G. Vail, George E. Udell and Benjamin L. Potter. It was resolved that the funds of the association should be deposited in the Southold Savings Bank, in readiness for the defence of members in the exercise of their rights of fishery in the waters of the State of New York.

—Clam diggers at Ipswich, Mass., earn \$4 per day.

THE MASKINGONE OF MUSKOKA.

GRAVENHURST, January 14, 1875.

EDITOR FOREST AND STREAM:

C. M. Root, in his communication on the Muskoka Region, published in the *FOREST AND STREAM* on the 31st ult., says that he does not believe there are any maskinonge in Muskoka, except in the Severn River. He is mistaken, for there are plenty of them in Moon River, which is a branch of the Muskogish River. The Muskogish is the outlet of Muskoka Lake and empties into the Georgian Bay, where the Moon River also empties. Adam Rolph and a party of five or six gentlemen from Toronto succeeded in killing seventeen maskinonge in about three hours last Fall, in Moon River, about five miles below Bala. They averaged twenty pounds each. They caught them with the trawl spoon bait.

We have now about three feet of snow, which is rather unusual for this time of year. The ice on the lakes is not very safe yet, as account of there being no snow on it; therefore no fishing done yet.

Yours truly,

This paper has repeatedly mentioned the maskinonge of Moon River.—Ed.

NEPION TROUT.

NEWCASTLE, Ontario, January 11, 1875.

EDITOR FOREST AND STREAM:

The communication in the last number of *FOREST AND STREAM*, from your clerical correspondent, in reference to his trip on North Shore of Lake Superior, reminds me of a circumstance which occurred to me when on a fishing tour to the Nepigon three years since. One day on a detour to fish the east side of the river, from Cameron's Point to Camp Alexander, and when about half a mile above the latter place, and wading in water about three feet deep, I hooked, as I thought, a very large trout. I was fishing the edge of the eddy, by the side of a very swift current. The fish at once struck the hook, and before I could raise the eddy had run out fully forty yards of line. This was repeated four or five times before I could get a slitch, and I began to think I had hold of one of the enormous pike which are found below Camp Alexander. However, I at length succeeded in bringing to view two beautiful trout. As I could not land them, in consequence of a rush, and it was impossible to get them into the landing net, I asked a young forester from St. Catharines, who was with me, and who was fortunately within hail, to come to my assistance. He netted the lower one whilst I seized the other around the gills, and by that means we secured them both. They were exactly the same length—twenty-one and three-quarter inches—one weighing four pounds twelve ounces, the other four pounds four ounces. I was at the time using two gaudy salmon flies in a casing line of double gut, a sixteen foot rod, hair and silk mixtures line, sixty yards long, and multiplying reel. Had I been using one of your twelve ounce rods, I am quite satisfied, although a fly fisher of thirty years' experience, I could not have landed these fish. My heaviest trout during the trip of ten days, was five pounds nine ounces, and during that time I only caught one that weighed less than one pound.

I found the trout very capricious about their food, some days taking fly very well, whereas at others they would not look at it, but would take grasshoppers greedily. They would take a small trolling spoon, but the bait they never refused was a minnow, but they were very difficult to procure. A few small fish about an inch long might occasionally be caught with the landing net near the shore; but on my next trip to Lake Superior I intended to take preserved minnows from home. Some gentlemen may say "Why not use artificial minnows?" I did so, but in consequence of the large size of the fish, and the rough and rocky nature of the stream, I found that after killing three or four trout, my bait was utterly destroyed, and moreover I have come to the conclusion that natural baits are preferable to artificial. Yours, J. J. R.

OPENING OF THE SALMON SEASON IN IRELAND.—Net fishing opened on the Sligo River on the 1st of January. On the first and succeeding days several fine fish were taken. The first arrival of Irish salmon for the season in London was on the 5th January, when the market price was as high as 10s. per pound. Since then the price had fallen 5s. per pound.

Rational Pastimes.

—The Paterson and Jersey City Curling Clubs had a contest last Tuesday, which resulted in favor of the latter.

—Curling is the great pastime now in vogue in Canada, and is enjoyed alike by all classes.

—Companies E and A, of the 79th Regt., played a curling match at the Central Park last week. The former were victors by a score of 33 to 25. Several impromptu games were also played by the citizens.

—Skating was excellent on Saturday last at all the resorts in New York and Brooklyn, the ladies flocking in great numbers to the Capitoline Lake. The storm of Sunday stopped sport for a day, but on Tuesday the ball was up again at the Capitoline and Prospect Park lakes, at the former of which the Sunday School of the Tabernacle church congregated in full force.

—On Saturday, January 23d, another ball match was played on the ice at Prospect Park, the score being as follows:—

Barnie's Side.....	3	2	5	1	2	1	10	1	0-35
Burdock's Side.....	1	1	3	1	3	0	1	3	3-13

First base by error—Barnie's Side, 12; Burdock's Side, 11. Runs earned—Barnie's Side, 3; Burdock's Side, 2. Umpire, Mr. Chadwick. Time of game, 1 hr. 40m.

—The Victoria Skating Club, of Montreal, intend having their Grand Annual Tournament at the end of next month. Medals are given by the Governor General to the best lady and gentleman skaters in the Dominion, and as all the clubs have been requested to send competitors and have signified their intention of doing so, we may expect the finest exhibition of fancy skating that has ever taken place in America. Beside their champion prizes the directors give several others to members of the club, which now numbers 2,600 subscribers. The following distinguished persons are among the honorary members:—Hon. J. A. Macdonald, Lord Monck, Gen. Sir W. H. The Grand Duke Alexis of Russia; Prince Alexander, the Earl of Dufferin; the Right Honorable the Countess of Dufferin. We acknowledge the courtesy of a kind invitation to be present at the Tournament as the guest of the Club.

—The coasting track on Boston Common is worn a smooth as glass, and a sled that was timed showed a speed of one mile in 53 seconds! Bridges are erected over the course to enable pedestrians to cross in safety, and great warning bells are rung when the sleds are coming. The policemen water the track every morning so as to get a fresh glare of ice. Why can't we have coasting in Central and Prospect Parks, where the danger is not half so great?

PORT RICHMOND, Staten Island, Jan. 20, 1875.—The Mullin Base Ball Club of Port Richmond were the recipients of an elegant silver-mounted bat, presented by the Staten Island Shooting Association. This bat was offered by the above association to be competed for at their festival, which took place last Thanksgiving at Sen View Park, and was won by the above club, beating their opponents twelve runs, and making them champions of the North Shore. The presentation took place last evening at Butler's Hotel, Dr. Rogerson making quite a lengthy speech in bestowing the gift, which was replied to by Mr. E. M. Eadie, a young member of the bar, in a very neat and creditable address. Several speeches followed, when all hands retired to the large dining room, where a sumptuous supper was in waiting, and for which much credit is due to Mr. F. D. Lawler, the worthy host. The Association will offer a solid silver ball next season for competition at their annual festival.

—Win. H. Craver, the catcher of the new Centennial Club of Philadelphia, is wintering in Troy. He led the average of the Philadelphia Club last season.

The Colleges.

—At a meeting of the Yale Freshman class the selection of the class crew was placed in the hands of the following committee:—Hostetter, Wilcox and Greene. Officers of the class boat club elected:—Pres., Taft; Sec., Law; Treas., McAlpine.

—A. Marquand, the winner of the first essay prize on "Utilitarianism" at the literary contest in New York, was stroke of the Princeton crew at the last intercollegiate regatta.

—It is rumored that the amount which Anheuser College, a residential institution, will receive from Mr. Williston's estate, has been considerably over-estimated. It is said that instead of \$288,000, (the first estimate,) \$150,000 is all that can reasonably be expected, as the outstanding debts were considerable.

—The following are the best games played by the champion Yales during 1874:—

April 18, Yale vs. Hartford, at Hartford.....	2 to 12
May 6, Yale vs. Hartford, at New Haven.....	4 to 6
May 27, Yale vs. Atlantic City, N. J.....	6 to 8
June 5, Yale vs. Knickerbocker, at New Haven.....	4 to 5
June 20, Yale vs. Hartford, at Hartford.....	0 to 7
July 1, Yale vs. Hartford, at Hartford.....	0 to 7
July 4, Yale vs. Baltimore, at Baltimore.....	0 to 7
July 11, Yale vs. Harvard, at Saratoga.....	1 to 0
July 15, Yale vs. Hartford, at Saratoga.....	5 to 4

The season's summary is appended:—
Games won—Yale, 7; opponents, 11. Professional games won—Yale, 10; opponents, 11. College games won—Yale, 4; opponents, 0. Amateur games won—Yale, 3; opponents, 0. Scores in professional games—Yale, 5; opponents, 394. Scores in college games—Yale, 43; opponents, 16. Scores in amateur games—Yale, 38; opponents, 8.

The club averages of those who played in a majority of the games are as follows:—

	No. of Games.	Times at bat.	1st base hits.	Average.	Put out.	Times at bat.
Hottel's, r. f.....	17	83	32	.457	21	4
Avery, p.....	17	57	21	.370	45	52
Hendley, c.....	17	50	21	.420	67	39

Nesim, 3d b.....	17	83	21	.254	27	52
Oshora, c.....	17	68	16	.235	15	4
Foster, c.....	17	68	16	.235	15	4
Smith, c.....	16	69	16	.232	26	4
Smith, 1st b.....	14	61	9	.148	156	1

THE HARVARD CHESS CLUB.—The chess tourney of this club was opened on January 19th under the management of a committee consisting of Messrs. Green and Stimson, '76, and Hunsman, '77. The following rules have been adopted:—

"The tournament shall be open to all the members of the Club, irrespective of their having passed the entrance examination. Every contestant shall play one game with every other contestant; and the one winning the greatest number of games shall receive the first prize, together with the Challenge Cup; and the victor in the next largest number of games shall receive the second prize. Not more than five minutes shall be allowed for any move. If any contestant retire before having completed his series, all games played by him shall be thrown out of the calculation."

The prizes will consist of sets of chessmen, of a minimum value of five dollars each.

PRINCETON COLLEGE, Jan. 25, 1875.

EDITOR FOREST AND STREAM:—

Last week both the University and Freshman crews began practicing on the pond rowing weight in the gymnasium. The University, on account of the experience of its members, pulled an excellent, steady stroke. In good time. The Freshmen are fast, acquiring the skill and muscle requisite to their success as good oarsmen. Possessing admirable natural qualities, and evinced great aptitude in learning to row well, the latter are making very flattering progress. The crews are pretty definitely decided. The Freshman crew is the favorite of the spectators. The sixth man, with a substitute, will be chosen early in the Spring, so that the regular crew will have every opportunity for practicing and training together.

The following named men will probably compose a part of the Freshman crew:—
Stevenson, Captain; Reed, Van Lennex, Karge, Savage. The remaining two and a substitute are about decided, but they have not been officially announced as yet.

This noon the class of '75 held their election for Class Day Orators, &c. After considerable noise and confusion the following were elected to fill the respective offices:—

Karge, New Jersey, Class Day Orator; A. Alexander, New York, Presentation Orator; G. A. Endlich, Penn., Class President; Jas. Pennell, Del., Master of Ceremonies; J. P. Coyle, Penn., Memorial Orator; W. H. Blinn, New York, Class Historian.
Messrs. McLean, Ill.; Reece, Ohio; Johnson, Maryland, were chosen as Editors of the Class Day Herald.
The following were elected as members of the Class Day Committee:—Harvey, N. J.; C. M. Fleming, Penn.; Cummins, Del.; Hutchinson, N. J.; Serber, New York; Kayburn and Case, Penn. The result of the election seems entirely satisfactory. The right men seem to have been chosen for the right places.

I have neglected to mention before that the University nine has begun its practice in the gymnasium. Some of its members gave abundant proof the first day that they still retain their former skill in throwing and

catching well. The beautiful throw of Jacobin, in particular, have elicited much admiration. The prospect for gaining the lost championship seems unusually fair at present.

I should like to have you correct a mistake made, not only in your own paper, but also in several other prominent New York papers, the Herald being one of them. Princeton members of the Regatta Committee are J. C. Drayton, '78, of Philadelphia, and not J. C. Drayton, '73.

QUINVIS.

Chess.

CHESS DIRECTORY.

Chess Player's Headquarters.—Cafe International, 294 Bovey. Chess, Up-Town.—Knickerbocker Cottage, 467 Sixth avenue. Down-Town Chess Club.—Cafe Cosmopolitan, 14 Second avenue. Turner Hall Chess Club.—Nos. 66 and 68 East Fourth street. Brooklyn Chess Club.—Mercantile Library, Montague street. Jersey City Chess Club.—No. 81 Montgomery street. Croson & Lihle's Chess Rooms.—Corner Nassau and Fulton streets. New Brighton Chess Club.—At Capt. Taylor's, Tompkinsville avenue. Union for Christian Work Chess Rooms.—Fulton avenue, opp. Elm place, Brooklyn.

THE COSMOPOLITAN CLUB TOURNEY.—The fourth annual tourney of the Down-Town Chess Club of New York has ended, and the successful contestants are Mr. P. T. Doyle of Hoboken, Mr. Grunbergh, Mr. Anders, Mr. Laracy, and Mr. Rosenbaum. The record, with the prizes won, is as follows:—

	Win.	Loat.	Prize.
Doyle.....	12	1	1st prize, Walnut Chess Table.
Grunbergh.....	11	1	2d prize, Gold Medal.
Anders.....	11	2	3d prize, Stereoscope.
Laracy.....	8	4	4th prize, Travelling Chess Board.
Rosenbaum.....	8	4	5th prize, Opera Glass.

WESTMINSTER PAPERS.—This noted English chess journal announces in its January number the publication of Wormald's work on chess, and also states that Captain Kennedy is about to issue a new edition of his "Waifs and Strays from the Chess Board."

Referring to the centennial tournament in Philadelphia, the same journal says:—
"The New York Congress of 1857 brought prominently before the world a Morphy in one branch of the game, and a Loyd in the other. The fame of both, and the consequent renown of American Chess, now extends from shore to shore, from world to world. We trust the Philadelphia committee will give History an opportunity to repeat itself in 1876, an opportunity for which, if there is any truth in tradition, the genius of history is ever on the watch."

THE ENGLISH PROBLEM TOURNEY.—The London Field of December 26th, in commenting on the Problem Tourney, says:—

The judges in this tournament pronounced their final decision in the course of last week respecting the special prize for the best four-move problem, and we are pleased to announce, as a consolation to some of our readers who vainly tried to solve it, that the award was declared in favor of the problem published in our issue of July 25, 1874, belonging to the set bearing the motto "Look after the Caby," which set, consisting of five problems, had already been crowned with the first prize as the best collection in the competition. The problem committee, having thus settled all the prizes, proceeded to open the envelopes containing the names of the winners, of which the following is a list:—

First prize, £25 (motto "Look after the Caby"), Lieut. S. A. Sorensen, Copenhagen.

Second prize, £15 (motto "Ultima Thule"), Dr. Conrad Bayer, Olmutz.

Third prize, £10 (motto "Hoc ardua vincere docet"), Mr. J. H. Finlison, Huddersfield.

Fourth prize, £5 (motto "Why so, prithee?"), Mr. W. S. Parvill, Rotterdam.

Fifth prize, £4 (motto "The best laid schemes of mice and men gang aft agley"), Mr. Th. M. Brown, Brooklyn, U. S.

Sixth prize, £3 (motto "All's well that ends well"), Mr. Wilhelm Nielsen, Copenhagen.

Seventh prize, £2 (motto "Auf Wiedersehen"), Mr. C. Noddebaum, Tessen, Germany.

Eighth prize, £2 (motto "Ludinus effigiem belli"), Capt. J. Luigi Rossati, Milan, Italy.

Ninth prize, £1 (motto "Work for money, but think for honor"), Mr. A. Frei Schmidt, Honolulu, Hawaiian Islands.

Special Prizes.—For the best four-move problem, £7 (motto "Look after the Caby"), Lieut. S. A. Sorensen, Copenhagen.

For the best three-move problem (£3 motto "Where's the master? Play the men"), Mr. F. Healey, London.

For the best two-move problem, £3 (motto "Imagine"), Mr. J. King, London.

—Herr Kosch has taken charge of the new chess column of the Paris Messenger, and this is what he promises to do in his opening article to his readers:—

"Our aim is to be the means of communication, the speaking medium between the amateurs of America and those of the old continent. We trust that our articles, although dated from a distant point, will not prove to be devoid of interest to our colleagues in the New World. We shall inform them regularly of all that takes place in Europe in chess circles, of the rising celebrities, of the fine games that are played, and, above all, of the superb problems that are here brought to light. At no distant period the principal players of our continent (in reply to the courteous invitation made by the Philadelphia committee), will go to meet the friendly welcome of their American friends and rivals in the contest for the 'championship of the world.' The tournament, which will take place during the Philadelphia exhibition, and which promises to be Homeric, will place in opposition a phalanx of competitors superior in number and in talent to all those who have been represented up to the present day in the annals of chess-playing. We shall not fail to inform our readers of the preparations made by the European players in view of this great event."

—At the annual meeting of the Palisade Boating Club of Yonkers, the following officers were elected:—M. F. Rowe, President; W. H. Guernsey, Vice President; B. F. Vermilue, Recording Secretary; R. G. Jackson, Corresponding Secretary; E. Underhill, Treasurer; H. H. Thayer, Captain; C. F. Harriott, Lieutenant; E. Jackson, W. H. Stewart, W. H. G. Getty, W. H. King, and H. B. Starr, Trustees. The Treasurer's report shows a balance of \$475 on hand. The club will comprise the name of forty active and twenty-one honorary members. The number of miles rowed by members last season was 5,422.

Billiards.

—It is stated that parties are willing to back Rudolph in a match with Garnier to the amount of \$10,000.

—A professional tourney for \$1,500 worth of prizes is to be held at Samuels', in Brooklyn, early in March, in which Rudolph, Vignaux, Garnier, Daly, Ubassy and the Dions will take part.

—The challenge that Garnier addressed to Rudolph has since been addressed to Maurice Vignaux, with this difference, that while Rudolph was allowed but five days to cover that \$1,000 forfeit, Vignaux is accorded fifteen. As to table, stake, stakeholder, etc., the terms of the two challenges are identical.

—George E. Phelan will in a few days remove his warehouses from No. 7 Barclay street to a location a trifle farther north.

—The room at the corner of Broadway and Thirty-second street, from which Ubassy, Vignaux & Strauss have withdrawn, has passed into the hands of Charles Durand, its former owner. It is reported that Francois Ubassy has accepted the position of supervisor there, and will not go with Rudolph.

—The Jeffersonian Billiard Rooms, No. 17 Chatham street, have just been refitted with entirely new tables of Griffith's manufacture, Delaney's patent cushions, and are now under the sole control of Major William H. Lewis, who is a general favorite with the editors, lawyers, and compositors of Printing House Square. The Major avers his determination to make his place in every sense acceptable to his patrons.

SMALLER BALLS.—Philadelphia billiard saloon keepers are introducing smaller balls. The prevailing size of balls in the country is 24ths. This has been the rule by common consent since October of 1860. Many years before that the balls were much smaller here at the East, a trifle larger at the West, and much larger at the South. Except in Mexico and South America, where, however, the tables are still 6x12, larger balls are used in this country than in any other. In England, where the table has an inside measurement of 6x12, the standard balls for match-playing are 22 in diameter. In France, where the tables are about the same size as here, balls are not known by their size. They are sold by weight, and the demand is for 19oz. balls.

New Publications.

MAGAZINES.

The Popular Science Monthly: D. Appleton & Co. New York. With its usual punctuality, comes this welcome guest for February, well filled with thirteen sterling articles, many of which are made more interesting by graphic illustrations of the text. The article on the relation country to the people is perhaps the most important paper of the current issue, which embraces a varied and valuable table of contents.

The Pterological Journal for February is now out, and among its noteworthy articles are those on "The Proper Study of Mankind," "The Reign of Panics," "Signs of Character," and "Contrasts of Child Expression." The work is very readable, especially to those versed in pterology.

The Science of Health Monthly for February is quite an interesting number, the contents including an article by Dr. Thrall on Dipteria; another explanatory of the philosophy of secretion and excretion; warnings against quacks and medical impostors who attract attention. Mr. Delano has a well written chapter on Hygiene in the School Room. Altogether the number is very instructive in a hygienic point of view.

The Nassau Literary Magazine for January, conducted by the Senior Class of Princeton College, contains several well considered, conservative articles, which display both critical taste and a broad knowledge of the subjects treated. "Ideals and Rousseau," "The Legend of Edmund Spenser," and a "Glimpse at the Indians" are capital articles, and equal to those which appear in more pretentious magazines. We congratulate the students of Princeton on their little brochure, but we would recommend that the Greek quotation *encha bouli* &c., be translated into English, as it has a pedantic look.

—A MOST VALUABLE GIFT.—We acknowledge the receipt through Gen. Humphreys, Chief of United States Engineers, at Washington, D. C., of a most valuable package of Government Maps, which will be of immense service to us in the preparation of the weekly issues of FOREST AND STREAM. Aside from their intrinsic value, such a token of appreciation of our journal and its efforts, coming from so distinguished a source, is most grateful and encouraging. To the officers of the Army, both at Headquarters and on the frontier posts, the FOREST AND STREAM has long been indebted for valued contributions and useful miscellaneous services. We find among them the most enthusiastic lovers of field sports and intelligent observers of natural objects.

CANINE SAGACITY.—A black-and-tan dog, on its morning trip to this city with its master, has been, of late, frequently assailed by a bigger dog in State street. Friday morning the little dog came with a big comrade, but the State street dog did not appear. Nothing disturbed the two dogs sat down and waited awhile, then the big dog deliberately hid himself behind a tree, and the little one, barking furiously, ran towards the city past the home of his enemy. No fighting dog appeared, and the little one repeated the maneuver, this time calling out his assailant. The little dog ran straight to his friend, who lay perfectly still until pursuer and pursued were within a rod of him, when he flew out from his tree and killed the State street dog in a second. The big dog and the little one then gazed tranquilly a few seconds at their fallen foe, after which the little dog kited off down town, and the avenger plodded slowly back toward Willbraham.—Springfield Republican.

—Mr. Willis Russell, the successful hotel keeper of Quebec, is now engaged securing a charter from the Quebec Legislature, for the purpose of establishing a Joint Stock Company, to carry on the hotel business in Quebec. A good deal of the stock is already subscribed. The company intend to build on one of the finest sites in the Upper Town, a construction of a gigantic nature to meet the wants of the present and future travel of Quebec.

Starting Clubs.—Agents, and others interested, are
advised that we do not insist upon their starting with
full clubs to secure our rates. They can send three or
more at a time, and on forwarding the required num-
ber of within 90 days will be entitled to same prelimi-
naries as if all were sent together.

CRICKET.

For \$20.00, four copies, one year, with one best
spring bat, one Collage bat, one Dark cricket ball;
price \$7.00.
For \$25.00, five copies, one year, with a complete
cricket set; one Collage bat, one polished bat, Chap-
man; one Dark cricket ball; one set of stumps; price
\$12.00.

FOOTBALL.

For \$15.00, three copies, one year, with one Rugby
outfit; price \$5.00.

FISHING RODS.

For \$15.00, three copies, one year, with one superior
four joint light rod, suitable for all kinds of fishing;
price \$7.00.
For \$20.00, twelve copies, one elegant rod; suit-
able for trout, black bass with fly, or for trolling bass
or pickerel; as blue a rod as can be made; German
silver tipped, with three tips; price \$25.00.

CROQUET.

For \$20.00, four copies, one year, with very hand-
some set of croquet; price \$7.00.
For \$25.00, five copies, one year, with superb set of
croquet; price \$10.00.
For \$30.00, six copies, one year, with the finest set
of croquet made; price \$14.00.

TABLE CROQUET.

For \$10.00, three copies, one year, with hand-some set of
Table Croquet, 8 balls and 8 mallets, in wooden box.
The game can be played on dining room or other
table.For \$15.00, three copies, one year, with the hand-some
set of Table Croquet, manufactured, made of cocco.

REMINGTON RIFLE AND SHOT GUN.

For \$75.00, fifteen copies, one year, with one Rem-
ington Rifle; price \$25.00.
For \$100.00, twenty copies, one year, with one Rem-
ington Rifle, 30-inch octagonal barrel, to be used for sporting,
hunting, or target shooting; price \$36.00.
For \$140.00, twenty copies, one year, with one Rem-
ington double barreled, breech-loading shot-gun,
one of the best ever offered to American
sportsmen; price \$45.00.

SHARPE RIFLE.

For \$100.00, twenty copies, one year, with one Sharpe
sporting or target rifle, best quality; price \$40.00.

WARD-BURTON RIFLE.

For \$90.00, forty copies, one year, with one Ward-
Barton rifle magazine gun, for large game, price \$9.00.SINGLE AND DOUBLE BARREL MUZZLE
LOADING SHOT GUNS.For \$30.00, four copies, one year, with one American

HURST'S
STEREOSCOPIC VIEWSNatural History
For Object Teaching in Schools,
—AND—
PARLOR ENTERTAINMENT.We are prepared to furnish the first sixty numbers
of the first series of

Animals and Birds of North America.

To these will be added a second series of foreign speci-
mens, and various Animals and Birds in grotesque ap-
pearances, never however violating their natural instincts.
We offer these views not as pictures only, but as ac-
titudes from nature. One of the great moving ele-
ments in our modern system of education is object
teaching. The unerring fidelity of the stereoscope
transfers the animals and birds from their natural
habitat to the rooms of the student, and the first le-
sson of our lessons, which they cannot fail to leave a lasting
impression of the form, color, habits, and locality of
each specimen.An experience of more than twenty-five years as
Taxidermist of the New York State Cabinet of Nat-
ural History, and in gathering his large collection of
natural foreign specimens, enables Mr. Hurst to com-
bine in every view the locality of the specimen with
its appropriate colors, woods or water, and coloring
from the originals.

TESTIMONIALS.

CORNELL UNIVERSITY.

ITHACA, March 14th, 1870.

I must congratulate you upon your great success in
this new educational enterprise. If we can arrange our
amusements so as to make them impart instruc-
tion to the mind, it will be a step in advance in edu-
cation.WASHINGTON, D. C., March 18th, 1870.
I am much pleased with the success you have met
with in giving to the stuffed specimens a very decided
appearance of life.I hope you may be able to continue the Series, and
I have no doubt they will furnish interesting means
of information and instruction in the study of the wild
animals of New York. SPENCER F. BAIRD.

STATE HOUSE, BOSTON, Mass., March 18th, 1870.

I have examined carefully the "Stereoscopic Studies
of Natural History," and judging by the first ten num-
bers, should say that they will prove of very great
value both as object lessons for students, and as a most
interesting series for the parlor Stereoscope. The de-
scriptions, illustrations, and selection of the subjects
and the general treatment are most perfect. I cordi-
ally recommend them to the public attention, and
trust you will meet the enormous demand which you
have created. EDWARD A. SAMUEL,
Curator of Zoology in Mass. State Cabinet.

PEABODY ACADEMY OF SCIENCE,

SALEM, Mass., March 19th, 1870.

I have shown your Stereoscopic Views to the Direc-
tors of the Academy and the editors of the American
Naturalist, Dr. Packard and Mr. Morse.They concur with me in praising their truthfulness
and the fact which they have displayed in surround-
ing the specimens with natural objects and scenery of
characteristic features. They are certainly very great
value both as parlor and drawing room illustrations, but
as educational illustrations for use of schools and
colleges, that nothing we have yet seen.

A. HYATT.

CORNELL UNIVERSITY, PRESIDENT'S ROOMS.

I have received the Stereoscopic Views of objects in
Natural History, and have enjoyed them greatly.
They have convinced all who have seen them of their
wonderful fidelity, both as regards the animals and
their surroundings; and I think they can not fail to be
of great service to the study of Nature to the great
by attracting students to it, and next by perfecting
them in it. ANDREW D. WHITE.

These Stereoscopes are sold wholesale and retail by

FOREST AND STREAM PUBL. CO.,

17 Ogham St., (City Hall Sq.) P. O. Box 3633.

J. & W. TOLLEY'S

BREECH LOADING GUNS.

Manufactory, Plouwer Works, Birmingham, Eng.

These guns are built with every

improvement for a American sport,

and are the cheapest guns of

guaranteed quality and shooting

powers sold in the United States.

They are made in six qualities,

each gun being branded with name,

which denotes its quality:

Pioneer, \$65 Gold.

Tolley, 90 "

Standard, 115 "

National, 140 "

Challenge, 160 "

Paragon, 225 "

Any one of the above may be

selected with confidence, as no

gun bears our name which we cannot thoroughly

guarantee in every respect.

Send for reduced illustrated descriptive price list.
